## Direct Hay Weighted Average Report for week ending 11/15/2024

### Special Note: FEED YARD REPORT

SOUTHWEST: The average paid by feedlots on November 1 for alfalfa ground and delivered was \$163.44, down \$6.86 from the previous month. Usage was 623T/day, down 6% from last month and total usage was 19,311T.

SOUTH CENTRAL: The average paid by feedlots on November 1 for alfalfa ground and delivered was \$137.39, down \$8.23 from the previous month. Usage was 198T/day, down 36 % from last month and total usage was 6,142T.

This past week, demand remained light, and prices were steady. Fewer trades in the marketplace continues, and therefore, movement of hay is minimal. Loads being delivered are to those with long term customers and hay that was contracted during the summer. Conversations this past week revolved around the lack of interest in grinder hay and expectations are, that we will not see that change until after the first of the year. The rain is a blessing for most areas but frustrating those who still have crops in the field awaiting harvest. According to the U.S. Drought Monitor for November 12th, between 2 and 4 inches of precipitation fell on a large swath covering the eastern half of Colorado, most of central and western Kansas, and adjacent Nebraska. All other Kansas areas received anywhere from .5 to 2 inches. All of this resulted in a large area of improvement depicted over southern and western Kansas, most of northern and eastern Colorado, part of southwestern Nebraska, and a few spots in eastern Wyoming. The categorical percent area of abnormally dry conditions (D0) increased to 40%, Moderate drought (D1) decreased to near 30%, Severe drought (D2) decreased to 3%, and no Extreme drought (D3) or Exceptional drought (D4) was recorded.
