Direct Hay Weighted Average Report for week ending 11/15/2024

Compared to last week hay demand is steady. With some of New Mexico seeing its first freeze and snow fall in the northern parts of the state most hay production is done for the year. According to New Mexico Crop Progress with the National Agricultural Statistics Services on November 10, 2024, Hay and roughage supplies were reported as 20 percent very short, 35 percent short, 42 percent adequate, and 3 percent surplus, compared with 26 percent very short, 43 percent short, 29 percent adequate, and 2 percent surplus last week. According to U.S. Drought Monitor as of November 12, 2024, Heavy precipitation in northeastern New Mexico, with snow reported in some of the higher elevations, produced areas of improvement to dryness and drought. A few high spots in New Mexico reported near 3 feet of snow, including locations near Las Vegas NM and Folsom NM. The only other area of improvement in the West Region was in eastern Washington.

Prices are dollars per ton and FOB they field or hay barn unless otherwise noted.
