Direct Hay Weighted Average Report for week ending 11/22/2024

Special Note: Note: Next report will be released on Dec. 6th due to the Thanksgiving Holiday.

Compared to last week hay sales are steady with demand higher than last week. Most producers are finishing up corn harvest and starting to bale corn stocks. According to U.S. Drought Monitor as of November 19, 2024, Moderate to heavy precipitation was widespread across the southern and eastern reaches of the High Plains Region, and moderate amounts were observed in some of the higher elevations. This included significant parts of Kansas, southeastern Colorado, eastern sections of Nebraska and South Dakota, and a relatively small area in southeastern North Dakota. The remainder of the region, under a regime of light to moderate precipitation at best, dryness and drought assessments were unchanged.
