

UNITED STATES DEPARTMENT OF AGRICULTURE

PUBLIC HEARING ON PROPOSED
RULEMAKING

TAMPA, FLORIDA

Docket No.
AO-388-A22;
AO-356-A43;
AO-366-A51;
DA-07-03

MORNING SESSION

HEARING BEFORE JUDGE MARC R. HILLSON

DATE: May 22, 2007

TIME: 8:30 a.m. to 12:00 p.m.

PLACE: 4400 W. Cypress St.
Pasco Room
Tampa, FloridaREPORTED BY: Aaron T. Perkins, RPR
Notary Public, State of
Florida at Large

Pages 191 to 340

1 APPEARANCES:

2
3 GARRETT B. STEVENS, ESQUIRE
4 Deputy Assistant General Counsel
5 U.S. Department of Agriculture
6 Marketing Division
7 Room 2343, South Building
8 Washington, D.C. 20250

9 Attorney for U.S. Department of Agriculture

10 MARVIN BESHORE, ESQUIRE
11 Attorney at Law
12 130 State St.
13 Harrisburg, Pennsylvania 17108

14 Attorney for Dairy Cooperative Marketing
15 Association, Inc.

16 CHARLES M. ENGLISH, JR.
17 Thelen Reid Brown Raysman & Steiner, LLP
18 701 Eighth Street, NW
19 Washington, D.C. 20001-3721
20 Attorney for Dean Foods Company, National
21 Dairy Holdings

22 DANIEL SMITH, ESQUIRE
23 Attorney at Law
24 64 Main St.
25 Montpelier, Vermont 05601

Attorney for Kentucky Dairy Development
Council, the Georgia Milk Producers, the
North Carolina Dairy Farmers, and U.S.
Milk

P R O C E E D I N G S

1
2 JUDGE HILLSON: Let's get ready to get
3 started, please. Let's go on the record.

4 Good morning. It's May 22nd. And that's a
5 good reminder for all of us to put our cell phones
6 on vibrate or some other sound mode or shut them
7 off.

8 This is the second day of our hearing in
9 the -- concerning milk in the Appalachia, Florida,
10 and Southeast marketing areas.

11 When we finished yesterday, Mr. Sims just
12 finished his direct testimony. As I stated
13 yesterday, and I'll say a number of times, in
14 trying to accommodate any -- particularly any
15 producers who are going to be in and out -- need
16 to get out by a certain time, I have been told
17 apparently at least nine producer witnesses that I
18 know of so far want to get in and out today.

19 So the plan is that we're going to start with
20 Mr. English, to do his cross-examination of
21 Mr. Sims. When we take our first break, which is
22 around 10:15, or so, at that point, I'm going to
23 have the producer witnesses testify.

24 I should say for the record I'll have
25 everyone who is here on a representational

1 capacity to introduce themselves for the record.
2 So I would -- if you're going to be putting on
3 witnesses, can you just --

4 MS. MAGEE: No, sir. I'm not representing --

5 JUDGE HILLSON: Oh, you're not representing
6 anybody?

7 MS. MAGEE: No, sir.

8 JUDGE HILLSON: Okay. They're just here on
9 their own, basically?

10 MS. MAGEE: Yes, sir.

11 JUDGE HILLSON: Okay. Fine.

12 Anyway, at 10:30 or so, at that point, we
13 will do the producer witnesses, and we'll go
14 through them until they're done, and we'll resume
15 Mr. Sims. Okay?

16 So, Mr. English, do you want to start your
17 cross-examination?

18 MR. ENGLISH: Thank you, Your Honor. Good
19 morning.

20 My name is Charles English. I'm here on
21 behalf of Dean Foods Company and National Dairy
22 Holdings.

23 CROSS-EXAMINATION

24 BY MR. ENGLISH:

25 Q. Good morning, Mr. Sims.

1 A. Good morning.

2 Q. I want to start with a couple of questions
3 about market administrator data and your interpretation
4 of it, to the extent that you can answer some questions
5 based upon both your years of experience in the market
6 administrator's offices and with these orders.

7 First, how much experience do you have with
8 the Florida order?

9 A. Several months. I was the -- I did have some
10 experience when I was in the Atlanta market
11 administrator's office. And that office took over
12 administration of the Florida orders for some few
13 months during my tenure in the market administrator's
14 office. But I do have some knowledge of the operation
15 of the Florida order since then.

16 Q. In the data set provided by the market
17 administrator for total Class 2 utilization by pool
18 handlers, there was a column called "nonfluid used to
19 produce."

20 A. Yes.

21 Q. Do you recall that?

22 A. I do.

23 Q. Do you know what that is?

24 A. It's my understanding, if that definition has
25 not changed, that would be the milk equivalent of

1 nonfluid products used to produce Class 2 products,
2 principally nonfat dry milk and probably some --
3 perhaps some condensed. And it is at the milk
4 equivalent of those.

5 Q. And does that product then get upcharged as
6 Class 2, or is it simply nonfat dry milk that's been
7 priced as Class 4 in another order?

8 A. The latter. It would come in as a receipt of
9 a -- at its milk equivalent at the plant and would be
10 taken out and brought in as Class 2 receipt and taken
11 out as a Class 2 disposition and would have no effect
12 on the producer milk utilization in that plant.

13 Q. And no effect on the blend price?

14 A. Yes.

15 Q. Yes, no effect, right? It's sort of a
16 negative question.

17 By that, you agree it will not have an effect
18 on the blend price?

19 A. I agree it would not have an effect on the
20 blend price.

21 Q. Similarly, under Class 3, "used to produce"
22 would mean used to produce Class 3 products, correct?

23 A. Yes.

24 Q. And under Class 4 utilization, nonfluid used
25 to fortify, do you recall that term?

1 A. I do.

2 Q. Do you recall what that was when you were in
3 the market administrator's office?

4 A. Yes. That would be, again, the equivalent of
5 the -- of the nonfat dry milk typically added to fluid
6 milk products to bolster the solids content of that
7 milk.

8 Q. And is that something typically done in
9 Florida?

10 A. That I do not know.

11 Q. Okay. And do you know today what the
12 diversion limitations are on Order 6?

13 A. I could -- yes. I can look them up.

14 Q. Okay. Well, do you know whether they are the
15 limits that are here in the order in the Code of
16 Federal Regulations, or are they something that the
17 market administrator has adjusted them to?

18 A. They are the latter. The market
19 administrator has exercised her discretion some several
20 years ago and instituted diversion limits, which are
21 different than those which are the codified limits in
22 the -- in the Code of Federal Regulations.

23 Q. And to the extent they are different from
24 those codified in the Code of Federal Regulations, are
25 they lower limits or higher limits?

1 A. Lower.

2 Q. Okay. And your organization has made no
3 proposal with respect to Florida diversion limits,
4 correct?

5 A. Correct.

6 Q. Do you concur, nonetheless, the diversion
7 limits that the market administrator is currently
8 marketing under are accurate?

9 A. Are accurate?

10 Q. Well, are the ones that she should be using.

11 A. I have no comment as to the appropriateness
12 of those -- of those diversion limits. They are what
13 they are.

14 Q. I understand. But they are not, as you've
15 just testified, actually the limits that are published
16 in the Code of Federal Regulations. And so I'm asking
17 you whether, as between the diversion limits that are
18 published in the Code of Federal Regulations or the
19 diversion limits that the market administrator has in
20 her discretion implemented, does your organization have
21 a position with respect to those?

22 A. I believe you could take the fact that we
23 have made no proposal to change those as indicative of
24 our position.

25 Q. Okay. But my problem is change those from

1 what? We have -- we have two different versions.

2 A. This is no -- there is no current proposal on
3 the table to adjust further the diversion limits in
4 Order 6 from those which exist in actuality today.

5 Q. Okay. So does that mean your organization
6 endorses the ones that are in actuality today?

7 A. We have made no proposal to change them.

8 Q. Okay. Turning for a couple of moments to
9 your testimony. On page 1, you refer in the bottom
10 paragraph to the percentage of milk marketed by DCMA
11 member cooperatives. And then you have a clause that
12 says, And when including milk marketed to other
13 producers, more than 87 percent of the producer milk
14 pooled on the order.

15 When you use the phrase "when milk
16 marketed" -- "when including milk marketed to other
17 producers," what do you mean by that phrase?

18 A. That could be any producer milk which is not
19 member milk of those nine listed cooperatives. It
20 could be milk of another cooperative, which is brought
21 into the marketing area as supplemental milk. It could
22 be marketed nonmember milk, which is marketed by the
23 cooperatives, any other milk other than members of
24 those -- of those nine members.

25 Q. Does that percentage include milk marketed on

1 behalf of dairy marketing services?

2 A. Yes.

3 Q. Could you briefly for this record describe
4 what dairy marketing services is?

5 A. Dairy marketing services is a, I guess, joint
6 venture or an organization which markets the nonmember
7 milk in the Orders 5 and 6 -- excuse me, 5 and 7 area.

8 Q. And it's a joint venture of what entities?

9 A. I believe Dairy Farmers of America is a
10 member, Land O'Lakes Dairy, perhaps.

11 Q. But you know that Dairy Farmers of America is
12 part of that joint venture?

13 A. I believe so.

14 Q. Approximately what portion of that difference
15 between the 69 percent that is marketed by DCMA member
16 cooperatives and the 87 percent when including milk
17 marketed to other producers, what portion of that would
18 be DMS?

19 A. I don't have that data in front of me.

20 Q. Turning to page 5 of your testimony, the
21 first paragraph, you reference, first, changes in order
22 marketing areas and pooling provisions flattened
23 producer blend price relationships with somewhat lower
24 Class 1 utilizations -- and I think you said "if"
25 rather than "in" -- in the Southeast. And then,

1 Combined the flatter Class 1 price surface and flatter
2 blend surface have reduced economic incentives to move
3 milk into the Southeast from the reserve supply areas.

4 With reference to the part of "changes in
5 order of marketing areas," what were you thinking about
6 when you used that phrase, "changes in order marketing
7 areas"?

8 A. Well, there was a consolidation of order
9 marketing areas under reform, expanded some market
10 areas, consolidated others.

11 Q. In fact, in the Southeast, as, I think, you
12 and I discussed maybe the last or maybe the one before
13 of these kind of proceedings in the Southeast, there
14 have already been sort of a movement towards larger
15 orders in the Southeast and preceded federal order
16 reform, correct?

17 A. Yes.

18 Q. Okay. But federal order reform took that a
19 step further nationwide, and we ended up with larger
20 federal orders, correct?

21 A. Yes.

22 Q. And so in addition -- in addition to the
23 flatter Class 1 price, the fact that you have larger
24 orders nationwide resulted in a flatter blend price
25 difference between areas that existed previously,

1 correct?

2 A. Could have, yes.

3 Q. By the way, when you use the phrase
4 "temporary" in your proposals, how long is temporary?

5 A. Until otherwise amended.

6 Q. So how is that different from permanent?

7 A. It's spelled differently.

8 Q. I'm recalling that at one time, when I was
9 growing up in Germany, I went to the school in the
10 1970s (inaudible) that had been built in the 1940s. To
11 my knowledge, they're still there today.

12 Is there some schedule that you are aware
13 of -- you've referred to the idea that USDA may be
14 looking at a broader issue about Class 1 prices. And
15 that's the link to this being temporary, correct?

16 A. Yes.

17 Q. Is there some schedule you're aware of for
18 when that process will move forward?

19 A. I have no official knowledge of any such
20 timetable. I can say that I think at least, perhaps,
21 the initial data analysis may be complete sometime this
22 calendar year, but the emphasis is on the "maybe."

23 Q. Okay. And that initial analysis is by way of
24 getting an economic analysis done by an outside
25 organization?

1 A. That's my understanding.

2 Q. And would that be Cornell?

3 A. That is my understanding.

4 Q. And to your knowledge, is that analysis going
5 to be done in a similar manner as the Cornell model
6 that was used as part of the federal order reform in
7 the late 1990s?

8 A. I believe similar would be a -- would be an
9 appropriate term, yes.

10 Q. Do you know of any differences that may be
11 applied to it at this time?

12 A. I understand there may be some updates to
13 that model, but I am not privy to what those updates
14 would be.

15 Q. You are, of course, aware of the model that
16 we're referring to?

17 A. I am.

18 Q. Okay. You were in the market administrator's
19 office at the time that the model was examined by USDA
20 as part of federal order reform?

21 A. I left the market administrator's office in
22 1996, which just preceded the beginning of the order
23 reform process.

24 Q. Time flies.

25 A. Doesn't it, though?

1 Q. Turning to page 9 of your testimony. You
2 refer to, The Southeast has not gone short of milk for
3 any extended periods of time, on the first paragraph.

4 A. Yes.

5 Q. Can you tell us of any periods of time when
6 the Southeast has gone short of milk?

7 A. Well, the region as a whole probably has not
8 gone short of milk. But milk doesn't move -- this is
9 not Star Trek. We don't move milk by blinking our eyes
10 and teleporting it. One place may need milk when
11 another place has milk. So the issue of a particular
12 plant needing milk may have occurred, or desiring more
13 milk than what was available instantaneously at that
14 point.

15 Q. Going back to some of the information
16 regarding the MA statistics.

17 Are you aware of -- for the Florida market
18 area -- whether there are any operations of
19 manufactured Class 3 products in Florida?

20 A. If there are, it is very few.

21 Q. And if they are very few, they're
22 manufacturing very small quantities?

23 A. That would be my supposition.

24 Q. So to the extent that the statistics reveal
25 that for 2006 Class 3 utilization was just under

1 103,000,000 pounds for the whole year, your supposition
2 would be that most of that product would have been
3 manufactured -- cheese -- outside the state of Florida?

4 A. Or whatever Class 3 product, but cheese
5 principally.

6 Q. Yes.

7 A. But that would be supposition, yes.

8 Q. Whether it's cheese or whatever Class 3 use.

9 A. Yes.

10 Q. I was using cheese, but let's just use
11 Class 3 product generically as opposed to any
12 inventories or shrinkage or anything like that.

13 So if we're talking about any manufactured
14 Class 3 product, you would agree, by and large, would
15 not have been manufactured in Florida?

16 A. I would agree.

17 Q. Okay. There are relatively small volumes of
18 Class 4 used to produce in 2006. The category is
19 actually used to produce, slash, other uses. And other
20 uses includes bulk ending inventory and NFMP-UTF
21 assigned to Class 4.

22 First, do you know what NFMP-UTF is?

23 A. Can you -- where is that?

24 Q. If you have Exhibit 13, it is probably any of
25 the --

1 A. Uh-huh (Indicates affirmatively).

2 Q. Exhibit 13, page 11, footnote 2.

3 A. I would presume the NFMP means nonfluid milk
4 product. But UTF is --

5 Q. Could that be ultrafiltration of some sort,
6 do you know, or you just --

7 A. I do not know.

8 Q. You don't know.

9 Okay. It is relatively modest volumes, but
10 do you know whether Florida has -- physically in
11 Florida -- any facilities to produce Class 4 products?

12 A. Which I would call a -- facilities which I
13 would call a facility which is dedicated to the
14 manufacture of hard Class 4 products, I'm unaware of
15 any.

16 Q. Are there any facilities owned by SMI in
17 Georgia for ultrafiltration?

18 A. I am aware of one I believe, yes.

19 Q. And without obviously revealing confidential
20 data, does that plant use ultrafiltration and then ship
21 the cream to one location and, conceivably, the
22 ultrafiltration process would be somewhere else?

23 A. I would -- conceivably, that would be how I
24 would expect that plant to operate, yes.

25 Q. Turning to Order 7, are there facilities

1 physically located in the marketing area of Order 7
2 that are dedicated to -- principally to the manufacture
3 of Class 3 products?

4 A. Yes.

5 Q. Can you name them?

6 A. I can try. I believe there is a Kraft
7 facility in Springfield, Missouri; a Kraft in
8 Bentonville, Arkansas, a Dairy Farmers of America plant
9 at Cabool, Missouri.

10 JUDGE HILLSON: Why don't you spell that.

11 THE WITNESS: Excuse me. Yes. C-o-b --
12 C-a -- pardon me. C-a-b-o-o-l, Missouri.

13 Dairy Farmers of America at Monett, Missouri.
14 That's M-o-n-e-t-t. Oh, there is a plant in, I
15 believe, Uniontown, Alabama named Southeast
16 Cheese, U-n-i-o-n-t-o-w-n.

17 BY MR. ENGLISH:

18 Q. Southeast Cheese?

19 A. Yes. That, off the top of my head,
20 represents the ones I can remember.

21 Q. And if they are not -- if they do not appear
22 as pool plants, they would obviously, therefore, be
23 nonpool plants for the order, correct?

24 A. Yes.

25 Q. Do you know whether those facilities receive

1 fresh milk all year round?

2 A. Some of them may.

3 Q. Do you know any that do not?

4 A. I'm not -- I can't speak to all of them
5 directly.

6 Q. Okay. Can you speak to any of them
7 indirectly?

8 A. Probably not without revealing confidences.

9 Q. Fine.

10 The operation of the Southeast committees, is
11 that what we would call a proprietary operation as
12 opposed to an operation owned by a cooperative?

13 A. Yes, that's my understanding.

14 Q. And just for the record, Kraft operations
15 would clearly be proprietary operations in the verbiage
16 that you and I use?

17 A. I believe so, yes.

18 Q. Okay. For Order 7 are you aware of any
19 facilities located in the marketing area that are
20 dedicated to the manufacture of Class 4 products?

21 A. There is one, and -- that there is a Dairy
22 Farmers of America plant in Franklinton, Louisiana,
23 Franklinton. And, quite frankly, I can't remember
24 whether the plant in Glasgow, Kentucky, is in the Order
25 5 or Order 7 area, but it has some use in Class 4.

1 Q. I'm going to get to No. 5 in a moment.

2 A. I just can't remember -- I can't remember
3 which side of the line it's on.

4 Q. And I understand. So wherever that
5 physically is located, it is either in 5 or 7, and it
6 is dedicated to the process of Class 4?

7 A. Yes, sir.

8 Q. And is that also a DFA operation?

9 A. No. I think the -- what's the name of it?

10 UNIDENTIFIED SPEAKER: Blue Grass Dairy.

11 THE WITNESS: Blue Grass Dairy in Glasgow,
12 Kentucky.

13 BY MR. ENGLISH:

14 Q. And is that a proprietary operation?

15 A. That's my understanding.

16 Q. Understanding that that may or may not be 5
17 or 7, any other operations dedicated to the process of
18 Class 4 located in our area?

19 A. Order 7?

20 Q. Order 7.

21 A. Not that I recall.

22 Q. Turning to Order 5 and just sort of for
23 completeness purposes, let's start with Class 4.

24 Leaving aside the Glasgow operation and its
25 physical location, any other operations dedicated to

1 the manufacture of Class 4 in Order 5?

2 A. I believe the Bally Milk Products plant in
3 Strasburg, Virginia, S-t-r-a-s-b-u-r-g.

4 Q. And is that a proprietary operation?

5 A. It's owned by Maryland & Virginia Milk
6 Producers.

7 Q. Any other operations physically located in
8 the marketing area of Order 5 dedicated to the process
9 of Class 4?

10 A. I believe that's it.

11 Q. Turning to the Class 3 --

12 A. Yes.

13 Q. -- products manufactured in Order 5, any
14 facilities?

15 A. Yes.

16 Q. And the names are?

17 A. Bel Cheese -- that's B-e-l -- in Litchfield,
18 Kentucky, L-i-t-c-h-f-i-e-l-d; Ash County Cheese, West
19 Jefferson, North Carolina. There may be a couple of
20 other small ones, but that's the principal.

21 Q. To your recollection, have we named all of
22 the plants in either -- in any of the Orders 5, 6, and
23 7 that are dedicated to the process of either 3 or 4?

24 A. All that I can recall.

25 Q. I understand, to the best of your knowledge.

1 A. (Indicates affirmatively).

2 Q. At least the last hearing in the Southeast --
3 which was January of '06, correct?

4 A. That's my recollection.

5 Q. -- you and I and you and representatives of
6 agricultural marketing services for USDA had a number
7 of discussions with respect to private contracts in the
8 marketplace, for instance, full supply contracts.

9 Since that hearing, to your knowledge, have
10 there been any significant change in the existence or
11 the term -- let's start with the existence of -- full
12 supply contracts for fluid milk in the Southeast?

13 A. Not that I'm aware of.

14 Q. And by the way, when I use the term
15 "Southeast," I'm using it like you did for your
16 testimony, the whole region. All right?

17 A. Okay.

18 Q. Okay. And is that how you used it when you
19 answered my question?

20 A. It is.

21 Q. Thank you.

22 Further, since that time -- and this may be
23 specific to a term -- have there been any changes in
24 the over-order premium? And I don't mean the level for
25 a moment; I mean the way it is credited with respect to

1 receiving credits.

2 A. No.

3 Q. Okay. What is your definition of a reserve
4 supply area?

5 A. With regard to my reference in testimony, I
6 would consider those order areas nearby and contiguous
7 to the Southeast as the reserve supply areas for the
8 Southeast general, plus perhaps Order 30.

9 Q. Okay. When you use that definition, did you
10 examine whether or not that milk in nearby contiguous
11 areas was actually available as a reserve to the
12 Southeast?

13 A. Some of it is; some of it may or may not be.

14 Q. Okay.

15 A. It depends on the day.

16 Q. Are there differences between reserve supply
17 areas when that milk may have alternative Class 1
18 demands in the immediate region contiguous to the
19 Southeast?

20 A. I beg your pardon?

21 Q. Would there be a difference in the nature or
22 the availability of reserve supplies when the
23 contiguous area might have significant needs for
24 Class 1 itself?

25 A. I would think that the demand for Class 1 in

1 those reserve supply areas would impact its
2 availability for Class 1 use in the Southeast.

3 Q. And should the secretary take that into
4 consideration in determining whether or not that area
5 is genuinely a reserve supply area for the Southeast?

6 A. Would you ask that again, please?

7 Q. Should the secretary take into consideration
8 competing demands for Class 1 milk as Class 1 in a
9 contiguous area in determining whether or not that area
10 is genuinely reserve supply for the Southeast?

11 A. I would suggest that even with demand for
12 Class 1 in those reserve areas, they do represent some
13 potential reserve supply for the Southeast.

14 Q. Is there a minimum volume available in that
15 contiguous area regardless of whether there is
16 competition for the milk in Class 1 in the contiguous
17 area that the secretary should look at with respect to
18 whether or not that area is a reserve supply area?

19 A. I would suggest that any area which
20 represents a, by the Southeast definition, a
21 significant pocket of milk would be a potential reserve
22 area.

23 Q. Okay. So what is your definition of the
24 Southeast of a significant pocket of milk?

25 A. Two producers in one county.

1 Q. Whether or not I agree, I thank you for the
2 answer.

3 You provided as to some, and maybe more than
4 some, facilities a methodology in the exhibits. And
5 I'm looking for a moment at page F, Exhibit 21. And
6 let me backtrack for a -- one second.

7 When you use "miles," what was your source of
8 these miles?

9 A. Map Point, closest option.

10 Q. Is that an Internet site?

11 A. That's a Microsoft product.

12 Q. Microsoft.

13 Traditionally, the department had used
14 something called the Household Goods Carrier's Guide,
15 at least in the hearings when we did this in the 1980s,
16 1990s.

17 Are you familiar with that --

18 A. Yes.

19 Q. -- product?

20 Do you know whether the results of that
21 product would be very similar to Map Point?

22 A. I would presume they are similar.

23 Q. Going to page F, as I understand, the
24 analysis on the top set of rows of -- which is from
25 Miami, correct?

1 A. Yes.

2 Q. That you looked at five different supply
3 areas, potential supply areas, for Miami, and then you
4 chose the least expensive, most efficient, something
5 like that; is that correct?

6 A. Yes.

7 Q. Did you do a similar analysis for every other
8 plant in the marketing area using potential supply
9 areas, say, for Mt. Crawford? Did you take
10 Mt. Crawford and do an analysis for potential supply
11 areas in Mt. Crawford?

12 A. With regard to bulk movements?

13 Q. Yes.

14 A. No.

15 Q. If I asked that question about the corporate
16 plant in Winchester, Kentucky, would the answer be the
17 same, that, no, you did not do a similar analysis of
18 potential supply areas?

19 A. With regard to bulk milk movements, the
20 answer is no, except to the extent that we analyzed
21 Miami and worked our way back out, which provides an
22 alignment with regard to those supply areas. But
23 directly moving in, no, we did not.

24 Q. Okay. And so let me just understand for the
25 record what you did do.

1 What you did, for the record, is you started
2 with Miami, the furthest distant point, correct?

3 A. Yes.

4 Q. And then you worked your way back up from
5 there, at least as a first step. I know you did some
6 other steps, smoothing, etc.

7 But as a first step, you worked your way back
8 up from Miami, correct --

9 A. Yes.

10 Q. -- rather than working your way down from
11 potential supply areas to each and every plant?

12 A. Correct.

13 Q. Okay. And I'm really not trying to ask this
14 about every plant, so let me just ask it generically
15 now.

16 Except for Miami as a first step, did you do
17 any analysis of all potential supply areas to a plant
18 other than Miami?

19 A. With regard to this analysis, no --

20 Q. Okay.

21 A. -- with regard to bulk milk movements.

22 Q. With regard to bulk milk movements, no, you
23 did not do that analysis?

24 A. No.

25 Q. Do you know where Ohio ranks in milk

1 production by volume relative to other states in the
2 United States? Is it in the top 10?

3 A. I don't recall.

4 Q. Would it surprise you if it's not in the top
5 10?

6 A. It would not surprise me.

7 Q. Similarly, do you know where Indiana falls?

8 A. I do not.

9 Q. Would it surprise you if it fell outside the
10 top 10?

11 A. No.

12 Q. Do you know whether the secretary, in
13 defining reserve supply areas as part of federal order
14 reform, included or excluded the Mideast area as a
15 reserve supply area for any part of the country?

16 A. I'm counting on my very poor recollection,
17 but I don't think it was at that time.

18 Q. Have circumstances changed that suggest that
19 it should be?

20 A. Certainly for Indiana.

21 Q. Okay. And in terms of changes for Indiana,
22 that would be the development of relatively larger milk
23 producing dairy farms in the Rensselaer area of
24 Indiana?

25 A. Yes.

1 Q. And whether or not such developments may
2 happen in the future, that has not happened to the same
3 extent in Ohio, has it?

4 A. I'm unaware of development to that extent.

5 Q. In Ohio?

6 A. In Ohio.

7 Q. Okay. Let me restate. I think what you did,
8 you started with this analysis on page F, Exhibit 21,
9 and calculated a price for Miami in the first set of
10 columns. And you set it at \$6.00, correct? Isn't that
11 the calculation?

12 A. I would say that we started with \$6.14 --

13 Q. Okay.

14 A. -- which represents the number or the price
15 suggested by this calculation.

16 Q. And then how did you get from \$6.14 to \$6?

17 A. There is three plants in that South Florida
18 area and smooth the price to represent -- Miami being
19 the farthest south. So we smoothed the price to cover
20 all three of those plants, which are now in the same
21 price zone and fixed \$6 as the price.

22 Q. They are now in the same price zone and
23 propose them to be in the same price zone?

24 A. Correct.

25 Q. Okay. Then, as I understand it, your next

1 step was using Miami, to back off Miami, correct --

2 A. Toward --

3 Q. -- as the initial step?

4 A. As we moved south to north, yes.

5 Q. As you moved south to north.

6 And for that purpose, you did an analysis
7 still using bulk milk movements, correct, in the first
8 instance?

9 A. Yes.

10 Q. So that gave you, ultimately, a plot of all
11 the plants going north, ultimately, northwest, north
12 and northeast within Orders 5 and 7?

13 A. Perhaps I should clarify that these two
14 models were basically compared simultaneously. It
15 wasn't like we struck a price at each point based on
16 Miami minus. They were really compared simultaneously,
17 Miami -- moving south to north, the package milk model
18 moving north to south. They were kind of laid on top
19 of each other simultaneously. To say one was run and
20 then we ran the other one and then it smoothed probably
21 doesn't properly capture the methodology.

22 Q. Okay. And I appreciate that, because I
23 didn't understand that.

24 So now let's talk about the second model for
25 a moment. The second model, as you described it, is

1 capturing the cost of moving packaged product south,
2 correct?

3 A. Plant to plant.

4 Q. Yes, plant to plant.

5 A. Plant to plant, west to east, north to south,
6 generally.

7 Q. Okay. You did not do that analysis -- you
8 did that analysis plant to plant. You did not do that
9 analysis from a plant and in Location A and a plant in
10 Location B selling both to a Location C, correct?

11 A. Correct.

12 Q. And just by way of saying, if A and B and
13 C -- Point Cs are in a triangle and each one is a
14 hundred miles -- so it's A -- it's a hundred miles from
15 Point A to Point B. And it's, furthermore, a hundred
16 miles from Plant A to retail location C, or wholesale
17 location C, and, similarly, it's a hundred miles from
18 Plant B to the same wholesale location C. You did not
19 do an analysis of that wholesale location C?

20 A. Unless wholesale location C had a plant
21 there.

22 Q. Okay. And so unless -- if it did not have a
23 plant there, you did not do an analysis in that
24 Location C, correct?

25 A. Correct.

1 Q. To the extent two plants -- Plant A and Plant
2 B, today with the same price, both selling to retail
3 location -- wholesale location C that's a hundred miles
4 from each location, to the extent that a Plant B now
5 has a higher price, it will have less of a competitive
6 ability to sell to wholesale location C if your
7 proposal is adopted, correct?

8 A. All things being equal, I presume that to be
9 true.

10 Q. Okay. Thank you. A good economist, all
11 things being equal.

12 A. Is there a good economist?

13 Q. I'm presuming.

14 Are you aware of USDA ever adopting Class 1
15 price surface using your dual models of starting in the
16 farthest point and backing off for raw milk and
17 starting closer and working out using packaged milk to
18 establish Class 1 prices?

19 A. I'm not aware of that as a -- as absolute
20 methodologies were used. I suspect that those
21 dynamics -- in fact, I believe that those dynamics are
22 weighed in any development of a Class 1 price surface.
23 The movement of both -- the cost of moving bulk milk
24 and the cost of moving packaged milk are weighed.
25 Although, they might not have been done in the specific

1 way that we did it, I think the methods that we used
2 are indicative and useful and common in the development
3 of a Class 1 price surface.

4 Q. Recognizing the inherent limitations that
5 those of us in the private industry may have as opposed
6 to Cornell, it is nonetheless the case that the Cornell
7 model used in federal order reform used multiple
8 locations of reserve supply and a spatial analysis for
9 the delivery of the milk in order to calculate a
10 relative Class 1 price surface, correct?

11 A. That's my understanding.

12 Q. And you did not do an analysis like that?

13 A. Our analysis, I would say, is not as
14 sophisticated as a Cornell analysis would be.

15 Q. Okay.

16 A. I don't think the results would be a lot
17 different, but it's not as sophisticated.

18 Q. One thing your analysis does is it assumes
19 that the sale or the -- I'm sorry, the movement, the
20 cost of the movement of packaging, is just as linear as
21 the cost of moving raw milk, correct?

22 A. I would agree with that.

23 Q. Do you know whether it is true that the cost
24 of moving packaged milk are just as linear as the cost
25 of assembling and moving raw milk?

1 A. Our presumption was that the base rate per
2 mile to move milk was roughly the same between bulk
3 milk movements and packaged milk movements, the
4 difference being the size -- the amount of milk on a
5 bulk milk load versus a packaged milk load.

6 Q. So you're not aware that USDA as a part of
7 federal order reform made a determination that the cost
8 of moving finished product, that is to say, packaged
9 milk, is actually nonlinear?

10 A. I do not recall that.

11 Q. And, therefore, you don't recall that the
12 Department concluded that not only is it nonlinear but
13 at a certain distance it is actually cheaper to move
14 packaged milk than bulk milk?

15 A. I do not recall that.

16 Q. And that was then -- maybe you don't recall.
17 But that was then the methodology by which USDA, as
18 part of federal order reform in adopting the Cornell
19 model, concluded that one would have to look at shadow
20 pricing.

21 Do you remember that term, shadow pricing --

22 A. I do.

23 Q. -- as part of federal order reform?

24 A. I do.

25 Q. Do you know what it was defined as?

1 A. I believe it represents the marginal value of
2 moving one more hundredweight of milk.

3 Q. And if the marginal value of moving one more
4 hundredweight of milk would change the entire pattern
5 of assembly and product transportation costs, did the
6 Department have an opinion as to what would happen
7 then?

8 A. That I do not recall.

9 Q. Okay. Do you recall whether the Department
10 believed that if the regulated price is set higher than
11 shadow price at a particular location then a lower cost
12 solution could be found by processing more milk at
13 another location?

14 A. That would make sense.

15 Q. Okay.

16 A. I don't recall that, but I can see the logic
17 to that statement.

18 Q. And if that were to happen, that is to say,
19 if as a result of adoption of the proposals it would
20 make more sense to produce milk at a farther location
21 and truck it down, that would be an inefficient result?

22 A. I beg your pardon?

23 Q. If adoption of a Class 1 price surface, not
24 your proposal, but your adoption of a Class 1 price
25 surface, were to lead to the situation where a marginal

1 cost of the unit encouraged milk to move from a farther
2 location -- packaged milk, now -- from outside these
3 areas, that would be an inefficient result?

4 A. I'm not following. I'm sorry.

5 Q. All right. I note that on pages L1 through
6 L8, this is your analysis of plant-to-plant movement of
7 packaged milk, correct?

8 A. I wouldn't characterize it that way.

9 Q. Why don't you characterize it for the record
10 rather than my characterizing it.

11 A. This represents, at the current price,
12 differences between plant locations and the proposed
13 differences between plant locations, the difference in
14 those prices per ten miles comparing plants, which are
15 at the same or less Class 1 price proposed and are
16 within 200 miles.

17 Q. And so your final column was a proposed
18 difference per ten miles.

19 And what were we supposed to take from that
20 final column?

21 A. That in each -- in each circumstance, those
22 plants which are within 200 miles and have comparable
23 price, or less prices, none of those cost -- none of
24 those differences exceed the real cost of moving
25 packaged milk.

1 Q. And the real cost of moving packaged milk
2 was?

3 A. In my understanding, approximately five and a
4 half cents per ten.

5 Q. But that analysis is limited, first, to 200
6 miles, correct?

7 A. Yes.

8 Q. You did not look at plants, say, 219 miles
9 away?

10 A. That's correct.

11 Q. And it was limited to plants located in
12 Orders 5, 6, and 7, correct?

13 A. Correct.

14 Q. So you did not look at plants under 200 miles
15 competing with plants along the borders of 7 and 5?

16 A. That analysis was the initial stage of the
17 packaged milk movement analysis, those plants outside
18 the marketing area to establish the first price on the
19 plants inside.

20 So that's what that page H analysis did. It
21 started with plants outside and then prepared their low
22 cost packaged milk movement to plants inside. So that
23 was -- that was the first step in that package milk
24 model of movement process.

25 Q. Did you do this analysis for page H for every

1 plant that's located just outside, compared to every
2 plant that's located just inside?

3 A. I believe so, yes.

4 Q. Is that contained in your documents anywhere?

5 A. It is not.

6 Q. Are you prepared to share that?

7 A. We don't have -- I don't have that report.

8 Q. Nonetheless, neither Analysis H nor Analysis
9 L took into consideration a nonlinear analysis for
10 moving packaged milk, correct?

11 A. Agreed.

12 Q. In your analysis, did you consider the impact
13 of plants located outside the marketing area having a
14 new or different incentive for moving sufficient
15 quantities of milk into one of these areas, getting
16 cooled, and the benefit of the change in the blend
17 price being used to subsidize the haul?

18 A. No.

19 Q. Do you agree that that would be one of the
20 things that ought to be done by USDA in considering
21 whether or not prices set here are reasonable?

22 A. You might want to repeat that.

23 Q. Okay. Let me break it down.

24 Do you agree that, if your proposals are
25 adopted, there will be a new blend price relationship

1 relative to Orders 7 and 32?

2 A. Yes.

3 Q. Okay. And that is that Order 7 blend price
4 will go up relative to the Order 32 blend price?

5 A. Presumably, yes.

6 Q. Similarly, the Order 5 blend price would go
7 up relative to Order 32, correct?

8 A. Yes.

9 Q. And similarly, the Order 5 blend price will
10 go up relative to Order 33, correct?

11 A. Yes.

12 Q. When those relative blend prices in Orders 5
13 and 7 go up relative to Orders 32 and 33, does that not
14 create the incentive for facilities located near the
15 borders of Order 5 and 7 to alter their route positions
16 so as to gain the benefit of that higher blend price?

17 A. Only if that benefit exceeds the
18 additional -- the additional cost of moving milk
19 further in order to qualify.

20 Q. And you did not do the analysis of whether
21 that would be the case, correct?

22 A. We did not.

23 Q. So assume for a moment that it did exceed the
24 cost. You would agree that in such an event, an
25 incentive would be created for plants located

1 physically outside of 5 and 7 to move the -- to change
2 their route disposition in order to get pooled under 5
3 and 7?

4 A. I would say that from a fluid milk plant
5 standpoint, they desire at equal Class 1 prices to be
6 in whatever highest price pool they can be in.

7 Q. So that's my way of saying yes?

8 A. My way of --

9 Q. You just can't quite bring yourself to say
10 it, correct?

11 A. Correct.

12 Q. Turning back to the market administrator
13 statistics for a moment and, for a moment, to Exhibit
14 16, 2006 annual statistics.

15 Do you know how far it is from O'Fallon,
16 Illinois, to either Order 7 or Order 5?

17 A. I analyzed that, but I do not recall.

18 Q. A relatively short distance?

19 A. It is not a long, long distance, no.

20 Q. You would agree there are -- you know,
21 looking at the exhibit that is Exhibit 16, there are
22 plants in Orders 32 and 33 that are within a hundred
23 miles of Orders 5 and 7?

24 A. I would agree with that.

25 Q. Going a little farther away and thinking for

1 a moment about Order 30 -- with a relatively low blend
2 price, correct?

3 A. Yes.

4 Q. -- did you do any analysis of the economic
5 incentives that might exist for a facility located in
6 Order 33 -- I'm sorry, in Order 30, to sell a
7 sufficient quantity of milk into 5, 6, or 7 so as to
8 pool on those orders as a result of adoption of your
9 changes?

10 A. No.

11 MR. ENGLISH: Just one second.

12 (A pause was had in the proceedings.)

13 BY MR. ENGLISH:

14 Q. Turning to my example of a plant in O'Fallon,
15 Illinois, that may -- I emphasize "may" -- if these
16 proposes are adopted, look to pool sufficient
17 quantities of milk in Order 7 to be pooled in Order 7
18 because of blend prices, correct?

19 A. It would not change their Class 1 price as
20 a -- as a pool plant, so any -- the change that -- I
21 guess a perceived benefit to that plant would be as a
22 result of blend price changes, yes.

23 Q. But you agree that the Class 1 price for that
24 plant isn't going to change?

25 A. I would agree with that.

1 Q. Okay. So they pick up -- if they do this,
2 they pick up the blend price benefit -- and yes, there
3 is a cost, but cost is the haul, correct?

4 A. The haul of the package -- the additional
5 packaged milk necessary to meet the in-area sales --
6 in-area route disposition requirement of Order 5 or 7.

7 Q. And that's an important distinction, because
8 it's the additional sales. Because as we already know
9 from the statistics, they already do have some sales;
10 we just don't know how many. Correct?

11 A. Correct.

12 Q. Okay. So it's only the marginal cost on
13 those additional sales, because they've already decided
14 to make the sale in the market?

15 A. Agreed.

16 Q. Okay. But plants that are competing with
17 physically Order 7 that may be no more than 100 miles
18 away will have a Class 1 price increase, correct?

19 A. Yes.

20 Q. So the relative benefit to that new plant
21 will also have to take into consideration that higher
22 cost that its competitor has, correct?

23 A. I would suspect that would be a decisional
24 point, yes.

25 Q. Okay. Did you, when you did your analysis,

1 on page H or on pages L1 through L6 -- well, let's
2 start with page H.

3 When you considered page H, did you consider
4 differences in over-order premiums?

5 A. No.

6 Q. There are differences in over-order premiums?

7 A. Yes.

8 Q. They are higher in the Southeast than, say,
9 in Texas?

10 A. Yes, generally.

11 Q. Generally or specifically?

12 A. I'd say generally. Yes, they are.

13 MR. ENGLISH: Your Honor, I have questions on
14 different areas, but I am further prepared to sit
15 down and give people an opportunity. I mean,
16 there is the transportation credit section, and
17 there is the diversions. And I'm happy to sit
18 down. If you want me to keep going, I can keep
19 going.

20 JUDGE HILLSON: I was going -- my plan was,
21 unless it was delayed, to go until 10:15, or so,
22 and take our morning break.

23 MR. ENGLISH: Well, I candidly -- the witness
24 and I got along so well that I got things faster
25 on this section than I expected. But, you know --

1 I think the witness is unhappy with me in that
2 characterization, but --

3 JUDGE HILLSON: I think the producers all
4 agreed to that. They start at 10:30.

5 MR. ENGLISH: Okay. Well, I assume there are
6 other people who might want to cross on this
7 potential section.

8 JUDGE HILLSON: Oh, yeah, I don't want to
9 start bouncing back and forth.

10 MR. ENGLISH: Okay.

11 JUDGE HILLSON: You do your whole thing.

12 BY MR. ENGLISH:

13 Q. All right. Let me turn to diversion limits,
14 then.

15 What is Florida doing that is working so
16 well?

17 A. I beg your pardon?

18 Q. Well, we have -- it looks to me as if,
19 whether it's over-order premiums, or whatever, you have
20 milk moving to Florida with relatively modest volumes
21 of milk being diverted, would you agree?

22 A. The diversion limits would require relatively
23 modest amounts of diversions.

24 Q. So the diversion limits are working as
25 intended and are maintaining a rather tight pool in

1 Florida, correct?

2 A. I don't know if that's the intent or not.

3 Q. But is that the result?

4 A. I would agree that those are tight diversion
5 limits.

6 Q. And nobody in your organization has asked the
7 market administrator to relax the limits from where she
8 has with her discretion put them, correct?

9 A. Correct.

10 Q. So why not adopt diversion limits similar to
11 those in Florida for Orders 5 and 7?

12 A. Well, I think the first reason is that the
13 secretary has already adjusted diversion limits in
14 Orders 5 and 7 with regard to the milk which earns a
15 transportation credit.

16 If you look at the amount of milk which moves
17 in the tight supply months, which is transportation
18 credit eligible, one third or more of the milk in
19 Order 7, for example, none of that milk earns a
20 diversion.

21 If you applied the Florida percentage of ten
22 percent in the tight diversion limit months and then
23 take another third of that away from -- because the
24 milk earns a transportation credit, now you've got a
25 diversion limit of six to seven percent. I think

1 that's Draconian.

2 I believe that our -- that the DCMA proposal
3 of 25 percent and with zero diversion limits on a
4 transportation -- a third of the milk because it earns
5 a transportation credit is appropriate.

6 Q. Now, that limitation you just referred to was
7 a result of the hearing last January that -- January
8 2006 --

9 A. Yes.

10 Q. -- that we talked about, correct?

11 A. Yes.

12 Q. And your organization is content with that
13 limitation of transportation credits?

14 A. That's what exists in the order.

15 Q. It was something that was actually testified
16 to by others and the secretary adopted?

17 A. Yes.

18 Q. Okay. And you're not proposing changing it
19 now?

20 A. There is no proposal to change that
21 provision.

22 Q. In fact, the others who supported that, the
23 list started with Dean Foods, correct?

24 A. I believe Dean was a supporter of that, yes.

25 Q. A supporter and the original proponent,

1 correct?

2 A. My recollection was the original proposal was
3 somewhat different, and the secretary flipped it around
4 and did it a little different way.

5 Q. Nonetheless -- and I was trying -- I'm trying
6 to divorce the two, but I see you put them together, so
7 we'll have to talk about them together.

8 Florida does not have transportation credits,
9 does it?

10 A. Correct.

11 Q. And no one is proposing having transportation
12 credits for Florida, correct?

13 A. At this point, correct.

14 Q. Okay. So I come back to my question: Why
15 not look more at the Florida model, which appears to be
16 working, than the Orders 5 and 7 model, which we seem
17 to have a hearing about every 16 months?

18 A. I don't think that you could just -- you
19 know, if all you're going to look at is the provisions
20 in a continuous order and whether or not they, quote,
21 unquote, work, you can look just as easily at the other
22 orders which are contiguous to 5 and 7.

23 I think the, you know, the issue in Orders 5
24 and 7 is contingent upon the data we have analyzed.
25 The daily variation, the necessary reserve in Orders 5

1 and 7 requires a reserve and a diversion limit as
2 proposed. And even it's -- the practical end is even
3 tighter than the codified limit we've proposed, because
4 you don't get a transportation credit on
5 transportation -- excuse me, you don't get a diversion
6 on transportation credit eligibility.

7 I believe the data is clear that what is
8 necessary in Orders 5 and 7 is that which is proposed.
9 And I don't think just simply saying, Well, Florida
10 does it this way; therefore, Orders 5 and 7 should do
11 it this way, carries any weight.

12 Q. Well, let me backtrack, because the first
13 part of that said that, as I understood it, that there
14 is no better reason to Compare 5 and 7 to 6 than to
15 compare 5 and 7 to, say, 1, 32, 33, and 126.

16 Is that what you essentially said?

17 A. Yes. That just because they're next door
18 does not mean that one applies necessarily to the
19 other.

20 Q. But you yourself have testified that they are
21 much more similar in they are the deficit areas. They
22 are -- 5 and 7 are almost as much deficit as area 6,
23 correct? I mean, they're all deficit?

24 A. Orders 5 and 7 are more like Order 6 than
25 they are --

1 Q. Okay.

2 A. -- 126, 33, 32, and 1.

3 Q. Okay. Thank you.

4 A. But not identical.

5 Q. Nonetheless, your organization has recognized
6 a number of pieces. And one of those pieces is if you
7 increase Class 1 prices, you're at least -- you are
8 proposing lowering the diversion limits from their
9 current levels in 5 and 7, correct?

10 A. Correct.

11 Q. And you're doing that because your
12 organization recognizes if all you did was raised the
13 Class 1 price and made no change to the diversion
14 limits, you are going to encourage additional milk to
15 pool on the order whether or not it actually shifts,
16 correct?

17 A. I don't know if I agree with that or not. It
18 depends on the handler. It depends on whether or not
19 they are maximizing their diversions now. It may not
20 change their ability to pool another drop.

21 Q. Why did you link the increase of Class 1
22 price to lowering diversion limits?

23 A. All three parts of the proposal are linked.

24 Q. I understand all three are linked. But what
25 is the linkage between Class 1 price and the diversion

1 limits?

2 A. They both tend to increase the uniform price
3 to producers, therefore, encouraging a supply -- a
4 sufficient quantity of milk to be attracted to the
5 marketing areas.

6 Q. And the reason that the diversion lowering
7 increases the uniform price to producers is it
8 discourages excess pooling of milk that does not
9 actually get received at plants in the marketing area,
10 correct?

11 A. It doesn't discourage it; it eliminates it.
12 If you can't -- if you can't pool it, you can't pool
13 it.

14 Q. So I take it your goal, then, is to increase
15 the uniform prices to dairy farmers shipping to Orders
16 5, 6 and 7?

17 A. Yes.

18 Q. So why not lower the diversion limits
19 further?

20 A. I believe that the combination of the Class 1
21 price increase in Orders 5, 6, and 7 with the lowered
22 diversion limits in 5 and 7 creates a blend price
23 incentive which will attract -- help attract milk to
24 Orders 5 and 7.

25 However, I believe that the tightening of the

1 diversion limits in Orders 5 and 7 certainly, if it's a
2 tradeoff with the Class 1 price increases, would then
3 now allow us to Class 1 prices in Order 6.

4 So taken as a package, lowered diversion
5 limits raise 5 and 7 blend prices. Higher Class 1
6 prices raise Order 5 and 7 blend prices. The higher
7 order -- the higher Class 1 prices in 5 and 7 allow us
8 to raise the Class 1 prices over 6, thereby tying all
9 those together.

10 Q. Did you bring the market administrator's
11 statistics, Exhibit 9, up with you?

12 A. Yes.

13 Q. Would you turn to page 13 of 13, please?

14 A. Yes.

15 Q. Do you agree that for 2004, for the relevant
16 months for diversion, limitations would be lowered if
17 proposals were adopted, that for 2004 the adoption of
18 your proposals would not actually eliminate any milk
19 from the pool for Order 7 -- I'm sorry, Order 5?

20 A. Based purely on the data presented on page 13
21 of 13 in Exhibit 9, that is the implication. I would
22 remind the record that the market administrator did not
23 go back and remove the milk which would have been
24 removed from the pool as a result of the diversion
25 limitation on transportation credit of milk. So this

1 data does not really capture what now is in effect in
2 terms of the diversion limits.

3 Q. And what's now in effect went into effect in
4 what month?

5 A. December 2006.

6 Q. So for the one month that is provided by
7 Order 5 that we actually have data, we see 61,379
8 pounds that would have been removed in addition to the
9 effect of transportation credits, correct?

10 A. I presume that that is the way they
11 calculated that, yes --

12 Q. Okay.

13 A. -- for that single month.

14 Q. Not a very large quantity removed, correct?

15 A. No. Yes, whatever. Not a very large
16 quantity.

17 Q. It's a load and a half?

18 A. Load and a third, yeah.

19 Q. Load and a third?

20 A. (Indicates affirmatively).

21 Q. Let's talk about the transportation benefits
22 for a few minutes.

23 What is the rationale for including payment
24 of the transportation credit on the full load of milk
25 and not just the Class 1 value?

1 A. As indicated in the testimony, the delivery
2 of milk to a plant supplies the total need of that
3 plant, pool distributing plants. The deliverers of
4 that milk don't really have any control over the
5 classification and use of the -- that plant. And it
6 had -- it cost exactly the same to move the Class 2
7 portion, Class 3 portion, Class 4 portion of that load
8 as it does the Class 1 portion, and, therefore, paying
9 for the transportation credit on the whole load
10 provides an incentive to deliver milk to that plant
11 where now it's a smaller incentive.

12 Q. Do you charge premiums on Class 2?

13 A. There are over-order prices on Class 2.

14 Q. Do they take into consideration the need to
15 price that haul?

16 A. That would be one element, I would think,
17 yes.

18 Q. Okay. There is no proposal to alter the
19 payment in by handlers. That is to say, only Class 1
20 milk will pay into the transportation credit pool,
21 correct?

22 A. Correct.

23 Q. So plants that have significant Class 2 will,
24 in essence, be subsidized by plants that are close to
25 100 Class 1 in terms of the haul if you adopt it on the

1 full load?

2 A. Full load would be paid.

3 Q. Which is to say that --

4 A. And the assessment is on Class 1.

5 Q. So would you agree with me that all things
6 being equal, in your own phrase, if you have a plant
7 that's basically 100 percent Class 1 and a plant that
8 is 70 percent Class 1 and 30 percent Class 2 in the
9 same volumes, that the plant that is 100 percent
10 Class 1 will essentially be subsidizing the haul to the
11 plant that is 70 percent 1 and 30 percent 2?

12 A. The plant that is nearly 100 percent Class 1
13 would pay more transportation credit assessment than
14 the one who is 70 percent Class 1, yes.

15 Q. Even though the volumes are the same?

16 A. Exactly, yes.

17 Q. Should the federal orders be in the position
18 of encouraging the production of Class 2 using fluid,
19 as opposed to my first set of questions about producing
20 nonfluid, in areas that are so deficit that you need
21 transportation credits, higher Class 1 prices, and
22 lower diversion limits?

23 A. I don't know that that proposal to -- will
24 encourage Class 2 use.

25 Q. It won't discourage the continued use of

1 Class 2 used in fluid, will it?

2 A. In and of itself, it would not.

3 MR. ENGLISH: Just give me a moment. I'm not
4 saying I won't have follow up, but that's all I
5 have for now.

6 JUDGE HILLSON: Thank you.

7 Does anyone else wish to cross-examine this
8 witness?

9 Mr. Stevens, does the AMS group have
10 questions?

11 MR. STEVENS: Yes.

12 JUDGE HILLSON: Make sure to put the mike on
13 and make sure to identify yourself.

14 MR. ROWER: I'm Jack Rower with the AMS
15 theory programs.

16 THE WITNESS: Good morning.

17 CROSS-EXAMINATION

18 BY MR. ROWER:

19 Q. Jeff, would it be accurate to characterize
20 your testimony concerning emergency conditions
21 addressed by Proposals 1 and 2 and 3 as addressing the
22 situation where the provisions, the current provisions
23 of Orders 5, 6, and 7, are inadequate to sufficiently
24 bring an adequate supply of milk to the marketing
25 areas?

1 A. Yes.

2 Q. Okay. Would the proposed amending of the
3 delivery date requirements in Proposal 1 -- let me
4 start again.

5 Would the proposed amending of the delivery
6 date requirements in Proposal 1, for example, to one
7 day per year for producer milk pool in the Appalachian
8 order, streamline the administration of the marketing
9 of milk in Order 5 for DCMA?

10 A. Did you say one day per year? I believe the
11 Proposal 1 one --

12 Q. I'm sorry, I meant one day per month.

13 A. It would streamline.

14 Q. It would streamline?

15 A. Yes.

16 Q. That's the question.

17 A. Yes.

18 Q. Okay. Jeff, do you expect any savings from
19 the streamlining in terms of savings in administering
20 your milk marketing operation?

21 A. There certainly could be an administrative
22 savings and certainly hauling savings, yes.

23 Q. Okay. If the touchbase portion of Proposal 2
24 is adopted -- I'll withdraw that. Excuse me.

25 Actually, that's it. Those are my questions.

1 Thank you.

2 JUDGE HILLSON: Anyone else at the USDA table
3 have any questions of this witness?

4 Is there any other cross-examination?
5 Mr. Beshore, do you have any redirect at this
6 time?

7 MR. BESHORE: I do, but I wonder if this
8 would be a good time to break.

9 JUDGE HILLSON: Well, depending on how long
10 your redirect is going to be. Do you think -- I
11 mean, I can go 25 minutes until the next break,
12 unless -- if you think you'll be done by then, or
13 else we can stop now and start the producers and
14 do the redirect afterwards.

15 MR. BESHORE: I'd prefer to do that.

16 MR. ENGLISH: I'm sure you do.

17 JUDGE HILLSON: Okay. In that case, it's
18 about 10 minutes before 10:00. Let's take a
19 15-minute morning break, and we'll come back with
20 the -- I think we have nine producer witnesses to
21 testify, so that's what we'll do.

22 (Brief recess was taken.)

23 JUDGE HILLSON: I understand the next witness
24 is going be Mr. Jefferson.

25 THE WITNESS: That's correct.

1 JUDGE HILLSON: Let me swear you in.

2 ROGER JEFFERSON,

3 the witness herein, being first duly sworn on oath, was
4 questioned and testified as follows:

5 JUDGE HILLSON: Could you please state and
6 spell your name for the record.

7 THE WITNESS: My name is Roger P. Jefferson.
8 Do you need me to spell it?

9 THE COURT REPORTER: No.

10 THE WITNESS: Okay.

11 JUDGE HILLSON: Okay. You have a statement
12 that you want to read; is that correct, sir?

13 THE WITNESS: Yes, sir.

14 JUDGE HILLSON: I'm going to mark that. I'm
15 assuming you want it in evidence. I'm going to
16 mark that as Exhibit 22.

17 Okay. You have -- may proceed, sir.

18 STATEMENT BY ROGER JEFFERSON

19 THE WITNESS: Thank you. My name is Roger
20 Jefferson, and I'm the owner and operator of
21 Mountain View Farms of Virginia, LLC, in Chatham,
22 Virginia, and we produce over 5,000,000 pounds
23 monthly.

24 I'm the president of Cobblestone Milk
25 Cooperative, Inc., a cooperative that was formed

1 in January of this year. Cobblestone's membership
2 is comprised mostly of large volume,
3 quality-conscious shippers that implement the
4 newest technologies at the farm level.

5 My milk and the Cobblestone milk is marketed
6 in the Southeast and Florida markets and pooled on
7 Federal Orders 7 and 6.

8 I'm testifying today on behalf of Cobblestone
9 Milk Producers, Inc., and Mountain View Farms of
10 Virginia.

11 I support the proposal submitted by DCMA to
12 change the Class 1 differentials in Orders 5, 6,
13 and 7, and modify some of the pooling rules, but I
14 would like to see some modifications to the
15 proposal.

16 The supply and demand situation in the
17 Southeast region covered by the three federal
18 orders is at a critical point. Milk production
19 has declined throughout the region to the point
20 that our market can no longer serve the demands of
21 the consumers in the region.

22 Based on data from the National Agriculture
23 Statistic Service, milk production in the
24 Southeast states has declined by an average of
25 122,000,000 pounds or 3 .6 cents annually since

1 2000.

2 Similarly, milk production in the Appalachia
3 states has declined by an average of 143,000,000
4 pounds or three percent annually since 2000.

5 And I have a graph in the presentation
6 showing that.

7 Going back to 1998 through 2005, the
8 production trend is shown more clearly. Southeast
9 production has declined 6.5 percent while the
10 national production has increased 1.2 percent
11 since 2000. This spread is almost eight percent.

12 As we know, farms located in the Southeast
13 have unique challenges that farms located in other
14 areas do not face. We have the highest production
15 costs due to heat stress, which causes large
16 swings in production and high land prices.

17 Significant periods of low producer pay
18 prices have led to rapidly declining production
19 that is not being replaced by new farms or
20 expansion on existing farms. Simultaneously,
21 population in the Southeast is at record levels,
22 and the projections by the census bureau are
23 shocking.

24 Florida's population is projected to increase
25 by 79.5 percent from 2000 to 2030 and move ahead

1 of New York State to become the third most
2 populous state.

3 Georgia's production is projected to grow by
4 46.8 percent during the same period and become the
5 eighth most populous state.

6 Relationships among milk sheds, production
7 centers, and population concentrations have
8 changed rapidly and significantly over the past 15
9 years. The popular and current solution to
10 reconciling production, processing centers, and
11 consumption within the Southeast is to import
12 fluid milk from distant sources to cover the
13 supply shortage. This solution is short-sighted.

14 The result of this action only adds to the
15 long run supply and demand problem in the
16 Southeast. Higher revenue generated by milk sold
17 to a primary Class 1 market is spread over
18 producers in 15 states to producers with
19 dissimilar production costs.

20 Producers in the Southeast markets ultimately
21 end up sharing the costs to import the milk into
22 the Southeast, sharing the cost to find homes for
23 the milk in the remaining months and sharing the
24 revenue pool.

25 While this is all acceptable and equal in

1 theory, it has been taken to a new level that is
2 no longer equitable. Local producers have been
3 forced out of the business because they cannot
4 compete with farms that have lower production
5 costs and receive transportation and financial
6 subsidies at the expense of the Southeast
7 producers.

8 Local milk does not have the value that I
9 believe it should have. Local milk should be
10 priced at the same level of outside milk that is
11 imported plus delivery cost.

12 We urge the Department to take a long-term
13 approach to addressing the supply demand problem
14 in the Southeast. As operators of large farms, we
15 must make long-term financial investments in our
16 operations to address the challenges in the
17 Southeast, and we expect that the Department would
18 take the same long-term approach.

19 While we support the changes in the Class 1
20 pricing surface, we do not believe that the
21 projected increase in producer pay price is enough
22 to affect or reverse the production trends.
23 Federal Order 5 is projected to receive an
24 additional 28 cents in the uniform price.

25 What I would also like to add here, which I

1 don't have in the written document, is the
2 majority of that is in one state, in South
3 Carolina, which brings that average up to the 28.
4 If you look at North Carolina and Virginia, it
5 would be far less than the 28.

6 The pay price to the producer is comprised of
7 two significant pieces: one, uniform price and,
8 two, over-order premiums. DCMA sets the
9 over-order premiums charged to the processing
10 plants and uses a counter-cyclical pricing method
11 that lowers the premium when the uniform price is
12 expected to increase and increases the premium
13 when the uniform price decreased. When the Class
14 1 pricing surface is modified, we are not
15 guaranteed to see any increase to the producer pay
16 price.

17 The Class 1 premium may be adjusted in the
18 manner in which plants are accustomed to
19 experiencing to compensate for a higher uniform
20 price, leaving the producers with a net of zero
21 price increase in Order 5. While Orders 6 and 7
22 have higher projections, the net impact may be
23 much less than anticipated or projected by the
24 Department.

25 If the desired result is to increase the net

1 price to producers to stimulate production, let us
2 ensure that the regulated change that we are
3 making will accomplish this goal. The USDA cannot
4 regulate over-order premiums, but the impact from
5 the premiums must be considered when discussing
6 net pay prices to dairy farmers.

7 Although some interested parties are
8 concerned that increasing the Class 1 differential
9 in counties bordering other federal orders, we do
10 not share this concern.

11 Although this may generate more packaged
12 product sales from outside sources within the
13 order, this is milk that local producers do not
14 have to share in importing costs prior to
15 processing.

16 If outside packaged product sales reach
17 critical levels, the processing plant will
18 ultimately be regulated by the Appalachia or
19 Southeast orders. We suggest that the pricing
20 surface must be increased in the bordering areas
21 of the Southeast and Appalachia marketing areas
22 and stepped up east and south of the bordering
23 states. We believe that the desired result will
24 not have achieved with Class 1 differentials
25 contained in this proposal.

1 The relationship between milk shed and
2 production centers have changed rapidly and
3 significantly over the past 15 years in the entire
4 United States.

5 In the Southeast alone, we see that the
6 average distance milk travels to Class 1
7 distributing plants has increased by 74 percent in
8 the Southeast order during the spring and 40
9 percent during the fall.

10 And I have a graph showing that.

11 While the proposal seeks to decrease the
12 diversion limitation percentages in Order 7, the
13 proposal requests a significant change in the
14 delivery day requirement. These two provisions
15 work in tandem and is a change -- and a change to
16 one affects the other.

17 Under current conditions, it is difficult to
18 maximize the percentage diversion limitations due
19 to the restrictions on the delivery day
20 limitations. The proposal requests more liberal
21 delivery day requirements, making it easier to
22 associate more milk with the order and sharing
23 revenues over even larger areas.

24 As I see it, this change in delivery day
25 requirements will continue to drive down market

1 utilization in the Southeast and the Appalachia
2 orders. More milk that does not perform for the
3 market will be associated with the order and
4 priced into the pool as Class 3 and 4, lowering
5 the uniform price to producers.

6 Effective September 1, 2006, the milk market
7 administrator made an administrative modification
8 to the producer milk definition known as market
9 association policy in order to lessen the burden
10 of meeting the strict diversion day requirements
11 in the order.

12 The administrative change made it easier to
13 associate more milk on the order and stay within
14 the regulations. Many producers, including
15 myself, were upset with this change. The current
16 proposal will all but eliminate, by reducing to
17 one day per month the delivery day requirement,
18 will be detrimental to the local producers.

19 With the change implemented in September
20 2006, the current delivery day requirements are
21 reasonable and easily met. We do not need to
22 reduce this delivery day requirement further.

23 The local producers that supply the market
24 all year will not benefit from this portion of the
25 proposal, and we are opposed to the delivery day

1 change.

2 We propose that the current delivery day
3 change -- let me start over.

4 We propose that the current delivery day
5 requirements be tightened to ten days year-round
6 and additionally support lowering the percentage
7 diversion limiting during all month -- limitations
8 during all months.

9 Any type of regulatory change that makes it
10 easier to associate more milk with the order may
11 temporarily allow for ample supply of Class 1
12 markets but, in the long run, only serves to
13 further eliminate local production.

14 Milk production has expanded in areas west of
15 the Southeast in record percentages over the last
16 ten years due to changes in the Southeast orders
17 that have allowed higher pay prices to those
18 producers at the expense of local producers.

19 While we believe that the change in the
20 Class 1 pricing surface is a step in the right
21 direction, we do not believe that this addresses
22 the dynamic relationship among consumer population
23 centers, farm locations, and processing centers.

24 If we continue only to modify existing
25 provisions or rules that are not currently

1 working, we will not solve the problems. We, as
2 producers, can help address these issues to
3 keep -- and keep pace with consumer demands only
4 if we are financially healthy and allowed to
5 compete on a level playing field. We must have
6 net higher income to producers in the Southeast
7 markets to sustain and grow their dairy industry.
8 Rules that allow the manipulation and exploitation
9 of producers must be prohibited.

10 We regret that the proposed changes are not
11 adequate to completely address the milk marketing
12 problems in the Southeast. We request that
13 further efforts be made and new initiatives be
14 taken to enhance milk production and pay prices
15 within the marketing area in order to ensure an
16 adequate supply of local fluid milk in the future.

17 JUDGE HILLSON: Thank you. Don't leave just
18 yet. They have an opportunity to ask you any
19 questions.

20 Does anyone have a question for
21 Mr. Jefferson? Mr. Beshore?

22 CROSS-EXAMINATION

23 BY MR. BESHORE:

24 Q. Good morning, Mr. Jefferson. I'm Marvin
25 Beshore. I'm representing DCMA in this hearing.

1 A. Okay.

2 Q. Okay. Can you tell me a little bit more
3 about -- tell us a little bit more about Cobblestone.
4 How many members does Cobblestone have?

5 A. I think it's nine.

6 Q. Okay. How many pounds of milk per month do
7 you market?

8 A. Can I ask you what the relevancy of this
9 hearing would be -- the question to this hearing?

10 Q. I'm asking questions.

11 JUDGE HILLSON: He gets to ask, and you get
12 to answer.

13 THE WITNESS: Okay.

14 JUDGE HILLSON: Unless there is something
15 proprietary or confidential type of information --

16 THE WITNESS: Okay.

17 JUDGE HILLSON: -- you need to answer
18 questions.

19 THE WITNESS: What was the second question?

20 BY MR. BESHORE:

21 Q. Roughly, what's your monthly volume of milk
22 at the cooperative markets?

23 A. Roughly 20,000,000.

24 Q. Now, are you responsible for the full supply
25 of any -- any Florida milk plant?

1 A. Not that I'm aware of.

2 Q. Okay. So that being the case, Cobblestone
3 does not have -- have itself any responsibilities for
4 balancing supply and demand as needed by any plants?

5 A. No. DFA has all the market, so we just have
6 to work around it.

7 Q. Well, in terms of your thoughts with respect
8 to what milk has pooled on the order, you understand,
9 of course, that when milk isn't needed by a plant or
10 when lesser volumes of milk are needed by distributing
11 plants on Saturdays or Sundays, for instance, that milk
12 may have to go to nonpool plants?

13 A. I think I understand the basics of that.

14 Q. Okay. Were you here yesterday when the
15 market administrators testified?

16 A. No.

17 Q. Okay. Let me just represent to you that they
18 showed an analysis of the daily requirements of the
19 fluid milk plants in the orders, how much milk they
20 order in aggregate from day to day -- okay? -- and that
21 there are variations in -- substantial variations from
22 day to day during the weeks of any given month.

23 Are you familiar with those dynamics and the
24 market --

25 A. No. I'm not an expert with that, no.

1 Q. Okay. I'll just ask you one other question.
2 You made the comment on page 3 of your
3 testimony that the DCMA -- I'm right at the top of page
4 3 -- sets the over-order premiums charged to the
5 processing plants and uses a counter-cyclical pricing
6 method that lowers the premium when the uniform price
7 is expected to increase and increases the premium when
8 the uniform price decreases.

9 Now, what is the basis for that statement?

10 A. As I understand it, as the price goes up on
11 the blend price or the Class 1 price, the over-order
12 premium goes down penny for penny to a point. And the
13 reverse, when milk prices are low, the order -- the
14 over-order premiums higher, and it goes up penny for
15 penny as the price goes down.

16 Q. Okay.

17 A. That's the way I understand it.

18 Q. Okay. And my question was what is -- you're
19 not a member of DCMA?

20 A. We haven't been allowed that yet, no.

21 Q. And you're not on the board of DCMA or
22 involved in its operations, correct?

23 A. No.

24 Q. Okay.

25 A. But I was on the board with

1 Maryland & Virginia, so I understood it a little bit at
2 one time.

3 Q. Okay. If I represented to you that the DCMA
4 has not used a counter-cyclical program in this area on
5 prices in several years, would you have any factual
6 basis to disagree with that?

7 A. Not with me, no. Not with me, no.

8 Q. Okay. Do you think that's not correct? Are
9 you asserting that what I've represented is not
10 correct?

11 A. I don't think it's made a change in the last
12 year. But my understanding was prior to -- well,
13 actually, in 2005, I thought it worked that way --

14 Q. Okay.

15 A. -- is my understanding.

16 Q. So your understanding is that several -- some
17 years ago, perhaps --

18 A. It hasn't this year. Okay? But I guess the
19 question is it doesn't mean it won't.

20 Q. Okay. But you asserted that it, present
21 tense, uses a counter-cyclical pricing method. Now
22 you're backing off of that, I take it?

23 A. I'm not sure I'm backing off of that, because
24 I think that system -- that regulation is still in
25 place. It's just you guys, the board on DCMA, has

1 convinced the processors, I guess, at this point to not
2 reduce over-order premium to this point. And I think
3 the question comes in is if we increase the
4 differential, then will the plants demand for new
5 folks, DCMA, to decrease the over-order premium?
6 That's the question, I guess, I have, the statement I
7 was trying to make.

8 Q. Okay. So your statement is you're concerned
9 that if the Class 1 differentials are increased, as
10 DCMA has requested and as you support --

11 A. Uh-huh (Indicates affirmatively).

12 Q. -- you're concerned that the processors may
13 say, We're going to reduce the over-order premiums?

14 A. Uh-huh (Indicates affirmatively).

15 Q. Okay. Fair enough.

16 JUDGE HILLSON: You said "uh-huh." Can you
17 just answer that one yes or no, please?

18 THE WITNESS: Yes.

19 JUDGE HILLSON: Thank you.

20 MR. BESHORE: Okay. Thank you.

21 THE WITNESS: You're welcome.

22 JUDGE HILLSON: Does anyone else --

23 Mr. English, come on up.

24 MR. ENGLISH: Charles English for Dean Foods
25 Company and for National Dairy Holdings.

1 CROSS-EXAMINATION

2 BY MR. ENGLISH:

3 Q. Sir, you've referenced that your members'
4 milk is pooled on two orders, Orders 7 and -- Orders 7
5 and 6.

6 Do you know what plants the milk goes to?

7 A. I can give a little bit of it. I'm not sure
8 I know where all of it goes. But some of it goes to
9 Atlanta Dairies.

10 JUDGE HILLSON: Speak up a little bit.

11 THE WITNESS: Some of it goes to Atlanta
12 Dairies. I know some of it has gone to Publix.
13 And I can't answer where the rest of it goes.

14 BY MR. ENGLISH:

15 Q. I'm on page 3 of your testimony, when you say
16 you don't share the concern with respect to increasing
17 the Class 1 differentials in counties bordering other
18 federal orders, you have the statement, If outside
19 packaged milk product sales reach critical levels, the
20 processing plant will ultimately be regulated by the
21 Appalachia or Southeast orders.22 Do you understand that even if the plant
23 outside the marketing area is regulated by the
24 Appalachia or Southeast orders, that its Class 1
25 differential will not as a result actually go up?

1 A. I think I understand that, yeah. I think I
2 do.

3 Q. So once it reaches critical levels and it
4 gets pooled on Orders 5 -- or 5 or 7, it would get the
5 benefit of the blend price in Orders 5 or 7 but not be
6 contributing a higher value, correct?

7 A. I think that's correct, as I understand it.
8 But, also, it would cost the producers less money
9 because it's less milk we have to pay to supplement to
10 come to the market.

11 Q. Now, what if that plant outside, in order to
12 become pooled on Order 7, takes sales away from Atlanta
13 Dairies and, as a result of lost sales, Atlanta Dairies
14 comes to Cobblestone Cooperative and says, We no longer
15 need your milk?

16 A. Probably not a good thing.

17 MR. ENGLISH: Thank you.

18 THE WITNESS: All right.

19 JUDGE HILLSON: Does anyone have any
20 questions for Mr. Jefferson?

21 Okay. Mr. Jefferson, I'm going to receive
22 your written statement as Exhibit 22.

23 (Exhibit No. 22 received.)

24 JUDGE HILLSON: You may step down.

25 THE WITNESS: Thank you.

1 JUDGE HILLSON: My understanding now is that
2 Mr. Smith is going to call the next group of
3 witnesses, so call your next witness, Mr. Smith.

4 MR. SMITH: Bill Holliday.

5 JUDGE HILLSON: Would you please raise your
6 right hand, sir?

7 WILLIAM E. HOLLIDAY,
8 the witness herein, being first duly sworn on oath, was
9 questioned and testified as follows:

10 JUDGE HILLSON: Okay. Can you please state
11 and spell your name for the record?

12 STATEMENT BY WILLIAM E. HOLLIDAY

13 THE WITNESS: My name is William E. Holliday.
14 Holliday is spelled H-o-l-l-i-d-a-y. And I'm
15 testifying on behalf of myself and Federal
16 Order 5, DFA producer, and the North Carolina
17 Department of Agriculture, where I serve as a
18 board agricultural member.

19 As a dairy producer, I support the proposal
20 submitted by the DCMA to change the Class 1
21 differentials in Order 5, 6, and 7 and modify some
22 of the pooling rules.

23 I wish to call your attention to the trends
24 in production and population in the main states
25 located in Order 5.

1 USDA data shows a persistent decline in milk
2 production in the region. Figure 1 shows, which I
3 have graphs in my handout, shows production trends
4 in five states that lie mostly within the
5 boundaries of Federal Order 5, Kentucky, North
6 Carolina, South Carolina, Tennessee, and Virginia.

7 1989 is used as the starting point because
8 this was the year when we first saw a significant
9 increase in the volatility of farm milk prices. I
10 should point out that significant amounts of milk
11 from Tennessee and Virginia moves into other
12 markets.

13 The population of these states is increasing.
14 Population has grown from 24.9 million in 1990 to
15 31.1 million in 2006, an increase of 25 percent.
16 Milk production has decreased 35 percent over this
17 same period.

18 Order 5 is a deficit market. Per capita,
19 milk production is low and decreasing, from 332
20 pounds in 1990 to 172 pounds in 2006. This is not
21 enough to meet the fluid product needs of the
22 market, which is around 180 pounds per person. It
23 requires almost 600 pounds of milk per person to
24 meet the total dairy product needs of consumers.

25 Figure 2 shows the sharp decline in per

1 capita milk production in each of these states
2 from 1990 to 2006.

3 Local milk is worth more now than it was in
4 2000 when Order 5 was created. An increase in the
5 minimum Class 1 price are justified.

6 Transportation costs have increased approximately
7 20 percent from January 2000 to the present, based
8 on the Bureau of Labor Statistics producer price
9 index for general freight in truck load lots.

10 There is no index specifically for milk hauling,
11 but I would expect these would have increased by a
12 similar amount.

13 While the proposed changes should put some
14 more money in producers' pockets, the proposed
15 changes are not enough. Based on DCMA's
16 prediction of the financial impacts in Order 5 of
17 26 cents, I can tell you as a producer that more
18 is needed to slow or reverse the trends in
19 production we are seeing.

20 Based upon my dairy operation of 175 cows, my
21 mailbox price has averaged around \$14.75 since
22 January 2001. My cost of production for that same
23 period of time to produce 100 pounds of milk was
24 around \$15.25. If the proposed changes were in
25 place during that same period of production, my

1 dairy operation would still have been in the red
2 24 cents a hundredweight.

3 From the initial data from a survey of dairy
4 farmers earlier this year, which was administered
5 by USDA-NASS, for the 10 commissioners of
6 agriculture in the southern region, I am not alone
7 in my financial struggles. 1,782 producers from
8 all ten states returned the survey instrument at
9 an amazing response rate of 64 percent.

10 Dr. Benson at NCSU is analyzing the data, and
11 he provided me with the following preliminary
12 result approximates.

13 Producers were asked about their views and
14 plans for their future. Their response clearly
15 show that they expect farm numbers and cow numbers
16 to continue to decline over the next five years.

17 Some farms do intend or expect to continue
18 and some of these plan to expand. However, these
19 expansion plans only partly compensate for the
20 loss of cows from the farms planning or expecting
21 to stop milk production.

22 When asked about the major problems they
23 face, the overwhelming response was related to
24 milk prices, price volatility, cost of production,
25 and cash flow problems. It is clear from this

1 survey that we need to improve the financial
2 returns from dairy farming and do so right away.
3 The DCMA proposal provides some help, but it is
4 not enough. Additional efforts must be made to
5 support local milk production.

6 Furthermore, based on some information
7 provided by Dr. Benson, the production response to
8 this change in income is likely to be minuscule.
9 Therefore, further efforts should be made and new
10 initiatives taken to enhance milk production
11 within Order 5 and the whole Southeast in order to
12 ensure an adequate supply of milk.

13 In addition to the supply and mailbox price
14 issues I have raised, I would also note that
15 Class 1 utilization in Order 5 has remained
16 unchanged since this order was created in January
17 of 2000.

18 During this period, Class 1 sales in the
19 order have been fairly constant, based on data
20 from the market administrator's office, and local
21 production has declined dramatically, as I have
22 already described.

23 However, the proportion of milk going to
24 Class 1 use has not changed. This raises the
25 issue of whether the order is fulfilling its

1 intended purpose.

2 In short, we believe that the situation in
3 Order 5 and, indeed, in the region served by all
4 three orders is serious, and I urge the USDA to
5 conduct or sponsor an in-depth study in order that
6 problems can be identified correctly, to identify
7 additional measures that might be taken, and to
8 evaluate the impact of these measures. This study
9 should be conducted right away and the results
10 should be made publicly available.

11 Thank you for allowing me to testify before
12 you today.

13 JUDGE HILLSON: Mr. Smith, do you have any
14 direct questions of your witness?

15 MR. SMITH: To clarify a couple of --

16 JUDGE HILLSON: Before you ask, I don't know
17 if -- I'm going to mark as -- Mr. Holliday's
18 written statement as Exhibit 23. I'm assuming you
19 want it in evidence.

20 MR. SMITH: Yes.

21 THE WITNESS: Yes.

22 JUDGE HILLSON: I've marked it as Exhibit 23.

23 MR. SMITH: That was the first order of
24 business.

25 I'm Dan Smith, and I'm here representing the

1 Kentucky Dairy Development Council, the Georgia
2 Milk Producers, the North Carolina Dairy Farmers,
3 and U.S. Milk.

4 DIRECT EXAMINATION

5 BY MR. SMITH:

6 Q. Mr. Holliday, just a couple of quick
7 clarifications.

8 On page 3 of your statement, you referred to
9 a survey being administered by USDA and NASS.

10 A. Right.

11 Q. Okay.

12 A. Right, that's correct.

13 Q. And on page 4, you indicated that you had
14 been provided some information by Dr. Benson.

15 Could you just identify Dr. Benson, and who
16 he is with?

17 A. He's an economist at North Carolina State
18 University.

19 MR. SMITH: Thank you. I have nothing
20 further.

21 JUDGE HILLSON: Okay. Does anyone have any
22 questions of this witness?

23 MR. ENGLISH: (Indicates affirmatively).

24 JUDGE HILLSON: Mr. English?

25 MR. ENGLISH: Charles English, Dean Foods and

1 National Dairy Holdings. I just have a question
2 about how something was prepared.

3 CROSS-EXAMINATION

4 BY MR. ENGLISH:

5 Q. You have Figure 2 attached to your statement,
6 Exhibit 23?

7 A. Yes.

8 Q. Do you understand how this was prepared?

9 A. I think so.

10 Q. Okay. Could you tell us?

11 A. It was prepared by the production in the
12 states and the population and how much milk had been
13 used in those states per person.

14 Q. Is it consumption?

15 A. Consumption.

16 Q. So is it milk -- it's labeled, sir, Per
17 capita milk production. I wonder if it's milk
18 production or is it milk consumption, or do you not
19 know?

20 A. I do not know that. I will be honest.

21 JUDGE HILLSON: I understand it's on the
22 website. Presumably, the website might explain.

23 MR. ENGLISH: Well, it may or may not.

24 JUDGE HILLSON: Well, I'm sure that --

25 MR. ENGLISH: I mean, I'm not going to object

1 to its admission, but I think that if it's used,
2 it needs to be, you know --

3 THE WITNESS: We can try to clarify.

4 JUDGE HILLSON: The AMS folks, whenever they
5 make the final decision, will give it the weight
6 it's worth based on the --

7 MR. ENGLISH: Yes.

8 All right. Thanks.

9 JUDGE HILLSON: Does anyone else have a
10 question of Mr. Holliday?

11 I'm going to admit Exhibit 23 and receive it
12 into evidence.

13 (Exhibit No. 23 was received.)

14 MR. SMITH: Excuse me, Your Honor.

15 THE WITNESS: It says production.

16 MR. SMITH: Again, the graph is clearly
17 labeled per capita at milk production, source for
18 the graph -- the chart. Excuse me, the source for
19 the chart is milk production disposition and
20 income.

21 JUDGE HILLSON: I think when he answered the
22 question, though, he said consumption rather than
23 production.

24 THE WITNESS: I did. I did.

25 JUDGE HILLSON: Reasonably seek a

1 clarification.

2 MR. SMITH: And Mr. Smith is reasonably
3 seeking an opportunity for Mr. Holliday to perhaps
4 reconsider if he might like to.

5 THE WITNESS: It was definitely on
6 production. The graph definitely says that, so --

7 JUDGE HILLSON: Anything else?

8 MR. SMITH: No.

9 JUDGE HILLSON: Mr. English, do you have --

10 THE WITNESS: I should not have answered
11 that.

12 RE-CROSS-EXAMINATION

13 BY MR. ENGLISH:

14 Q. I'm sorry, this is Charles English. I
15 just -- do you know how it was actually calculated?

16 A. Off that website. That's all I can tell you.

17 JUDGE HILLSON: You have your answer,
18 Mr. English.

19 MR. ENGLISH: Thank you.

20 JUDGE HILLSON: You may step down.

21 THE WITNESS: Thank you, sir.

22 JUDGE HILLSON: Mr. Smith, you may call your
23 next witness.

24 MR. SMITH: Bill Newell.

25 JUDGE HILLSON: Do you have a copy of his

1 statement and for the reporter?

2 MR. SMITH: Yes.

3 JUDGE HILLSON: Good morning, Mr. Newell.

4 Let me swear him in before you ask any
5 questions. Okay. Can you please raise your right
6 hand, sir?

7 BILL NEWELL,

8 the witness herein, being first duly sworn on oath, was
9 questioned and testified as follows:

10 JUDGE HILLSON: Okay. Can you please state
11 and spell your name for the record?

12 THE WITNESS: Bill Newell, N-e-w-e-l-l.

13 JUDGE HILLSON: Okay. Go ahead, Mr. Smith.
14 You can ask your questions.

15 MR. SMITH: Mr. Smith, again. Mr. Newell,
16 you've prepared a statement.

17 THE WITNESS: Yeah, I have.

18 MR. SMITH: Your Honor, can we mark the
19 statement? We're up to --

20 JUDGE HILLSON: Twenty-four, is what I have.

21 MR. SMITH: Twenty-four.

22 JUDGE HILLSON: Okay. I've marked your
23 statement as Exhibit 24.

24 MR. SMITH: Would you like to read your
25 statement for the record?

1 STATEMENT BY BILL NEWELL

2 THE WITNESS: All right.

3 I am Bill Newell, a dairy farmer from
4 Maysville, Kentucky. My son and I milk a small
5 herd of registered Holsteins on our 560-acre
6 family farm.7 There has been milk shipped from this farm
8 every day since 1928, when my grandfather started
9 milking cows. I have been doing the majority of
10 the milking since 1970. I'm a DFA council person
11 and was on the Mid Am division board prior to the
12 merger that formed DFA. I'm a member of the Board
13 of Directors of the Kentucky Dairy Development
14 Council, and a past director of the Kentucky
15 Holstein Cattle Club. I have provided leadership
16 to young people with 4-H and FFA dairy projects.17 There was, at last count, 145 dairy farms in
18 my district. Many of them are small, similar to
19 mine, with the cows being milked and cared for by
20 their owners and very little hired labor.21 Nearly 100 percent of the milk produced in my
22 district is processed at the Kroger bottling plant
23 in Winchester, Kentucky.24 I am here today representing the views of the
25 Kentucky Dairy Development Council. The KDDC was

1 formed in 2005 through the efforts of dairy farmer
2 leaders, allied industry friends, and many other
3 individuals who shared a vision of improving the
4 Kentucky dairy industry. Our mission is to
5 educate, promote, and represent dairy producers
6 and foster an environment for the growth of the
7 Kentucky dairy industry.

8 The initial funding for the organization was
9 provided through a grant from the Kentucky
10 Agriculture Development Board, ADB. The ADB
11 invests 50 percent of the Kentucky's Master
12 Settlement Agreement proceeds into agriculture and
13 rural enhancement. In addition to the ADB funds,
14 KDDC has secured financial assistance from allied
15 industry members through sponsorships.

16 The KDDC board is composed of 12 producer
17 directors representing districts throughout the
18 commonwealth. Also, eight individuals serve as
19 allied industry board members representing various
20 related businesses.

21 The KDDC board determines policy issues,
22 working with the Kentucky Department of
23 Agriculture, the education community, regulatory
24 agencies, and other agriculture organizations,
25 such as Kentucky Farm Bureau.

1 The efforts undertaken in the past months
2 include conducting federal milk market order
3 informational sessions to better educate our
4 producers concerning federal order issues. We
5 also held numerous barn meetings throughout the
6 state focusing on federal order updates, improving
7 milk quality, and increasing production.

8 KDDC has also worked with other state dairy
9 producer organizations in the Southeast. Through
10 the Southeast Producers Steering Committee, KDDC
11 worked jointly with the other producer
12 organizations to submit a proposal requesting
13 changes in pooling provisions for Federal Order 5
14 and Federal Order 7.

15 We suggested lower diversion limits and
16 increasing touchbase requirements with the goal of
17 higher Class 1 utilization in both orders.

18 That specific proposal was denied. But we
19 believe the efforts of KDDC and the steering
20 committee helped bring us to this tipping point
21 for the dairy industry in the Southeast, this
22 emergency hearing. I have attended and testified
23 at hearings in the past and appreciate the
24 opportunity to be here.

25 KDDC supports the proposals being made at

1 this hearing. We have reviewed them and have
2 arranged for a third party to review them on our
3 behalf. We also understand that Kentucky, as a
4 border state for the Southeast region, and our
5 producers, especially those in Federal Order 5,
6 will not see the benefit financially as producers
7 farther south in the three orders.

8 However, we do believe it is a small step in
9 the right direction, and we anxiously anticipate
10 more aggressive steps to turn production around in
11 the Southeast.

12 The dairy industry in Kentucky is composed of
13 just over 1,100 licensed dairy farms that produced
14 over 1.3 billion pounds of milk in 2006. Kentucky
15 dairies are challenged by the climate conditions
16 and other factors but many are attempting to
17 address those challenges by improving their
18 facilities with a focus on cow comfort.

19 Positive changes to pooling provisions,
20 reducing the cost of balancing the market, and
21 enhancing Class 1 price will encourage facility
22 upgrades resulting in improved production in
23 Kentucky and the Southeast.

24 Our industry sits near good markets and
25 transportation arteries and is in a good

1 logistical position to supply milk to the growing
2 population of Orders 5, 6, and 7.

3 KDDC is interested in this hearing because
4 the proposals affect the margins that can be
5 generated by Kentucky dairy farmers, and they will
6 be -- better able us to serve the growing
7 Southeast markets.

8 These proposals affect both the revenue from
9 milk sales and provide some offset to marketing
10 costs. Our organization views these proposals as
11 a step in the right direction, but we would like
12 to see them made stronger.

13 We understand that the transportation credit
14 system has been improved. Markets must be
15 supplied and balanced. Seasonal variation in milk
16 production doesn't match the way the consumers
17 always buy milk at the stores. There is not
18 enough milk produced in the Southeast to meet the
19 high demand days of consumption, and we must bring
20 milk into our market to satisfy demand. Farmers
21 generally find that overall price levels are the
22 highest and market service costs the lowest if
23 they manage the process cooperatively.

24 They look to the order for a market structure
25 to help recover a portion of those costs. The

1 order transportation credit system, more
2 importantly, help us keep up with volatile gas
3 prices. Energy costs affect all the levels of my
4 business. I regularly see fuel increases in my
5 milk hauling bill and at the gas pump when I drive
6 my car.

7 However, it is difficult for the dairy
8 industry to pass along all the short-term
9 increases in fuel prices as quickly as they
10 change. This is why the transportation credit
11 system is so important.

12 We support the payment being made on the
13 entire load of milk and for more months out of the
14 year. The costs of delivering a load of milk to a
15 customer is the same no matter if the load is
16 composed of Class 1 volume or otherwise.

17 Now that the transportation credit system
18 changes with changes in fuel costs, we can better
19 recover our costs as fuel prices rise. Also,
20 consumers are protected because the credit system
21 adjusts down if fuel prices drop.

22 The changes in the Class 1 differentials are
23 very important. The differentials are supposed to
24 help draw a milk supply and help move it to
25 processing plants. They have not been adjusted in

1 many years. We understand that this is a
2 difficult topic.

3 It gets different reactions in different
4 regions of the country, in different areas of the
5 Southeast and even on different sides of the room
6 in the KDDC meetings. But difficult or not, this
7 is our system, and it has to keep pace with costs
8 and efficiencies, or the users of the system will
9 lose faith in it.

10 Kentucky is on the outer edge of the
11 Southeast marketing area. This means that
12 increases in differentials in Kentucky, even if
13 warranted, will be tempered by the differential
14 levels in surrounding markets where there is no
15 hearing being held and no differentials can be
16 changed.

17 We will certainly benefit from the entirety
18 of the proposals being presented here today, but
19 we will not see the level of positive price impact
20 that other producers in the Southeast may
21 experience.

22 For this reason, we are hopeful that the
23 nationwide review of the differential surface
24 moves its way through USDA swiftly. Kentucky
25 dairy farmers are stressed by the supply demand

1 imbalance east of the Mississippi River and think
2 a review of this price surface nationally may
3 help.

4 The package of proposals being discussed here
5 does bring some assistance to the producers in
6 Federal Orders 5, 6, and 7. The blend estimates
7 of approximately 28 cents per hundredweight in
8 Order 5, 75 cents per hundredweight in Order 7,
9 and \$1.20 per hundredweight in Order 6 will be a
10 positive step.

11 We will keep a watchful eye on the impact of
12 the change in the diversion limits. And if they
13 need additional modification, we will urge the
14 market administrators to make those adjustments
15 since those provisions can be adjusted on a local
16 order basis.

17 We look forward to a more comprehensive
18 review of differentials from the Department. We
19 urge the USDA to do its work here quickly, as all
20 of the same factors that caused the differentials
21 to need a review and proposed change that resulted
22 are present in the remainder of the eastern United
23 States.

24 Thank you for the opportunity to be here
25 today.

1 JUDGE HILLSON: Mr. Smith, do you have any
2 further questions of this witness?

3 MR. SMITH: I do not, Your Honor.

4 JUDGE HILLSON: Okay. Any cross-examination
5 of this witness?

6 I guess the answer to that is no. You may
7 step down. And I will admit your written
8 statement as Exhibit 24, receive into evidence.

9 THE WITNESS: Thank you.

10 (Exhibit No. 24 received.)

11 JUDGE HILLSON: Okay. Mr. Smith, you may
12 call your next witness.

13 MR. SMITH: Norman Jordan.

14 JUDGE HILLSON: Raise your right hand.

15 NORMAN JORDAN,

16 the witness herein, being first duly sworn on oath, was
17 questioned and testified as follows:

18 JUDGE HILLSON: Okay. Can you please state
19 your name and spell it for the record?

20 THE WITNESS: My name is Norman Jordan, Jr.
21 That's J-o-r-d-a-n.

22 JUDGE HILLSON: Okay. And I'm going to mark
23 Mr. Jordan's written testimony as Exhibit 25.

24 MR. SMITH: Thank you, Your Honor.

25 JUDGE HILLSON: And do you have any other

1 preliminary questions of him?

2 MR. SMITH: Other than, Mr. Jordan, if you
3 wish to read your statement for the record.

4 STATEMENT BY NORMAN JORDAN

5 THE WITNESS: Okay. I am Norman Jordan, Jr.,
6 a dairy farmer from North Carolina, and I am
7 testifying as a representative of the Southeast
8 Producers Steering Committee.

9 This committee is composed of representatives
10 of the North Carolina Dairy Producers Association,
11 the Georgia Milk Producers Association, the Upper
12 South Milk Producers Association, the Kentucky
13 Dairy Development Council, the North Carolina
14 Department of Agriculture and Consumer Services,
15 and the North Carolina Farm Bureau Federation.

16 The Southeast Producers Steering Committee
17 supports the proposal submitted by DCMA to change
18 the Class 1 differentials in Orders 5, 6, and 7
19 and modify some of the pooling rules.

20 I wish to call attention to the supply and
21 demand situation in the region covered by the
22 three federal orders.

23 USDA today shows a persistent decline in milk
24 production within the region. Figure 1 shows
25 production trends in the region as defined by

1 USDA. Appalachia is Kentucky, North Carolina,
2 Tennessee, Virginia, and West Virginia. Southeast
3 is Alabama, Georgia, Florida, and South Carolina.
4 Delta is Arkansas, Louisiana, and Mississippi.

5 1989 is used as the starting point, because
6 this was the year when we first saw a significant
7 increase in the volatility of farm milk prices.

8 From 1989 to 2006, Appalachia declined from
9 just over 8,000,000,000 pounds of milk produced to
10 just over 5,000,000,000 pounds per year, a 35
11 percent loss of production. The Southeast
12 declined from 4.8 billion pounds to about
13 4,000,000,000 pounds, a 16 percent loss of
14 production. The Delta declined from 2.5 billion
15 pounds to 1,000,000,000 pounds, a 60 percent loss
16 of production.

17 The population of the Southeast is
18 increasing. Figure 2 compares population changes
19 and changes in milk production and shows
20 population growth relative to those production
21 changes.

22 As you can see, we are experiencing strong
23 population growth, especially in the Southeast and
24 Appalachia, while the greatest decline in milk
25 production is occurring in all three regions

1 covered by Orders 5, 6, and 7.

2 The Southeast is a deficit market. Figure 3
3 shows the relationship between milk production and
4 population for various regions compared to the
5 U.S. as a whole. Population is highly correlated
6 with the consumption of dairy products. Per
7 capita milk production is the lowest in the
8 Southeast.

9 In short, production is decreasing and
10 population is growing leading to an increasingly
11 deficit situation. The steering committee is
12 concerned about the growing deficit, both in terms
13 of the added cost of bringing in milk from distant
14 sources and the possibility of supply disruptions
15 caused by weather, animal diseases, terrorism, and
16 the like.

17 While we appreciate that the proposed changes
18 are expected to have a positive effect on the
19 uniform prices in the three orders, we believe
20 strongly that the proposed changes are not
21 adequate to fully address the milk marketing
22 problems in the Southeast.

23 Therefore, the Southeast Producers Steering
24 Committee request that further efforts be made and
25 new initiatives be taken in a very timely fashion

1 to enhance milk production within the market area
2 in order to ensure an adequate supply of milk.

3 In addition, we believe that the situation in
4 the region served by the three orders is serious,
5 and we propose that an in-depth study be
6 undertaken or sponsored by USDA as soon as
7 practical in order that problems can be identified
8 correctly, to identify additional measures that
9 might be taken, and to evaluate the impact of
10 these measures. The result of this study should
11 be publicly available.

12 Title 7 of the U.S. Agricultural Code states
13 that one of the functions of milk marketing orders
14 is to assure a level of farm income adequate to
15 maintain productive capacity sufficient to meet
16 anticipated future needs.

17 The Southeast, a net importer of dairy
18 products, is deficient even for fluid milk and
19 soft product needs as reported by the Hoard's
20 Dairyman Magazine.

21 Thank you for allowing me to be here this
22 evening.

23 JUDGE HILLSON: Mr. Smith, do you have any
24 further questions of Mr. Jordan?

25 MR. SMITH: I don't at this moment, Your

1 Honor.

2 JUDGE HILLSON: Mr. English, do you have some
3 questions -- or at least one question?

4 CROSS-EXAMINATION

5 BY MR. ENGLISH:

6 Q. Turning to the last page of your testimony,
7 you have a quote that you say comes from Title 7.
8 Quote, assure a level of farm income adequate to
9 maintain productive capacity sufficient to meet
10 anticipated future needs.

11 Where did you get that quote?

12 A. That was in a report that was put together
13 when we made an initial request to USDA to have a study
14 done. And it was used as justification for the
15 request.

16 Q. Do you know whether that language expired in
17 1999?

18 A. No, sir, I could not tell you that.

19 MR. ENGLISH: Okay. Just for the record --
20 I'd like the record to reflect that language did
21 sunset in, actually, 1996. And, in fact, that
22 issue was litigated recently in federal court.
23 And a federal judge said, while it was in dispute,
24 he concluded that, indeed, that language expired.

25 JUDGE HILLSON: If this is something you want

1 me to take official notice of --

2 MR. ENGLISH: I will try to get you the name
3 of the lawsuit, the citation. But this is an
4 issue that the office of counsel is well aware of.
5 I don't think they'll dispute it. The fact of the
6 matter is that language has expired.

7 JUDGE HILLSON: Any other questions of this
8 witness, Mr. Smith?

9 MR. SMITH: Dan Smith. It's my
10 understanding, Your Honor, that that issue is not
11 as boilerplate clear as Mr. English represents,
12 and --

13 JUDGE HILLSON: Well, that's the great thing.
14 You're all going to get to write briefs.

15 MR. SMITH: Right. For the record at this
16 point, we will --

17 JUDGE HILLSON: Okay.

18 MR. SMITH: -- endeavor further
19 clarification.

20 JUDGE HILLSON: Okay. And I will admit
21 Mr. Jordan's statement as Exhibit No. 25 as
22 received into evidence.

23 (Exhibit No. 25 received.)

24 JUDGE HILLSON: And you may step down. Thank
25 you for that.

1 Okay. You may call your next witness.

2 MR. SMITH: Dr. Ben Shelton, I believe.

3 I would like, Your Honor -- at the present
4 time, it's my understanding Mr. Shelton has just
5 completed his statement this morning. And we had
6 hoped to be able to just read his statement into
7 the record as he has it, but he has not had a
8 chance to make copies.

9 JUDGE HILLSON: It's your privilege to put it
10 in, if you want to. Otherwise, he can read his
11 statement.

12 MR. SMITH: Sure.

13 JUDGE HILLSON: Please raise your right hand.

14 BEN SHELTON,
15 the witness herein, being first duly sworn on oath, was
16 questioned and testified as follows:

17 JUDGE HILLSON: Can you please state your
18 name and spell it for the record?

19 THE WITNESS: My name is Ben Shelton,
20 S-h-e-l-t-o-n.

21 JUDGE HILLSON: Sounds like Mr. Smith wants
22 you to read a statement that you have in front of
23 you, so you may proceed.

24 STATEMENT BY BEN SHELTON

25 THE WITNESS: Okay. I'm a veterinarian in

1 North Carolina, started in 1981, been there,
2 practiced there. I started in the dairy business
3 in 1985 in a partnership with 80 cows. Currently,
4 my partners are my wife and Farm Credit. I'm
5 milking about 1,250 cows.

6 I've seen a lot of changes over the last
7 20-something years in the dairy industry. I've
8 seen a lot of people go out of business.

9 I remember back in the eighties, mailboxing
10 over \$15 for our milk. And last year in '06, we
11 had five months that we didn't break \$13. So I
12 think the game has changed a lot, but we haven't
13 changed the rules.

14 It wasn't many years ago sitting in a co-op
15 meeting it was talking about surplus versus
16 deficit. And it was kind of concluded that, from
17 a co-op standpoint, you were better to be a little
18 bit short than a little bit long. It was easier
19 to bring in milk when it was needed than it was to
20 get rid of too much milk when you were really
21 long.

22 And all that has changed now. So when I say
23 the game has changed but the rules have stayed the
24 same, it's kind of like in baseball when they got
25 to hitting all those home runs. They started

1 looking if they need to change the ball or the bat
2 or the height of the pitchers mound. So I think
3 that's kind of where we are today.

4 I have some clients who moved into North
5 Carolina about five years ago. They had family
6 that had dairied in Michigan. So they knew what
7 the price was in Michigan. They came to North
8 Carolina, and they looked at what the price was in
9 North Carolina. They said this looks like the
10 place for us to dairy, about a \$2.50 to \$3
11 advantage in price to be in North Carolina versus
12 being in Michigan.

13 Now after they've been here for five years,
14 that \$2.50 to \$3 -- and they have a way to monitor
15 price in Michigan because they still have family
16 there.

17 So some months their family in Michigan
18 actually outpays them from what they get in North
19 Carolina, and some months they are higher.
20 Overall from what they tell me in comparing the
21 prices, there is about a 70 to 80 cent advantage
22 of North Carolina over Michigan now, whereas five
23 years ago it was \$2.50 to \$3.

24 So with dairy farmers in our area seeing
25 these kind of changes -- and I think the

1 frustration that it brought -- and I will admit
2 that myself and a lot of producers don't
3 understand the complexities of diversions,
4 pooling, touchbase, a lot of these things that
5 were talked about here.

6 But we do understand the difference between
7 the order paying on 82 percent Class 1 utilization
8 and paying on 62 percent Class 1 utilization. We
9 know that that's a lot of dollars in the pocket.

10 We talk about how much money is really needed
11 to make a difference. I think that's really the
12 bottom line. Of course, everybody has their
13 opinion as to what that is.

14 In my opinion, you've got to make a move of
15 at least a dollar to a dollar and a half in the
16 mailbox price before you're going to stimulate
17 production in our area. And I'm sure we can get
18 some economists, and we can work that out with a
19 lot of graphs and analysis.

20 After sitting here today, I'm just really
21 glad I'm a dairyman and not an economist or a
22 lawyer. But I'm sure you all can work that out.

23 So with the frustration and the lack of
24 knowledge, I think from that a group of us got
25 together, and we started talking about it. We

1 started trying to educate ourselves. And from
2 that, we formed what we called Upper South Milk
3 Producers Association, which in reading -- or in
4 hearing the testimony about Kentucky Dairy
5 Council, I think we really had very similar goals
6 and ideas in mind.

7 We need to learn about the system. We need
8 to educate ourselves; we need to educate the
9 producers. And if we can do that, then we can at
10 least ask the right questions, so then we can
11 start asking the questions, and then we can start
12 trying to drive some change in the right
13 direction.

14 One of the things that we try to do is we
15 sponsored a school on federal milk marketing,
16 brought in Dr. Tommie Shepherd from the University
17 of Georgia, Dr. Benson from North Carolina State
18 University, got some producers together. And they
19 spent a day trying to explain to us how the
20 federal milk market system worked so that we would
21 know a little bit more about it.

22 From that, the Southeastern Steering
23 Committee was formed, because through that we kind
24 of got the idea that, yeah, there were some rules
25 that needed to be changed to catch up with the

1 game.

2 So the steering committee was formed. We
3 made a trip to Washington, met with the USDA
4 officials. We were very impressed that they were
5 willing to spend three-plus hours with us with a
6 lot of people in the room and asking a lot of
7 questions and really seemed to understand our
8 concerns and our plight and where we were trying
9 to go.

10 They suggested to us that we submit a
11 proposal, and so we did. We worked on that. We
12 submitted the proposal, trying to change diversion
13 limitations and touchbase. And it was rejected.
14 I know it went through the normal process of
15 comment, and it was rejected. But I do feel that
16 through this process, hopefully we had some
17 influence on how -- on why we got here today.

18 I got in last night and was talking to some
19 people. And I came to find out that -- and you
20 can correct me if I'm wrong -- but my
21 understanding was that Dean Foods requested a
22 study from the market administrator's office to
23 look at what some of these proposals would have
24 done specifically related to changing diversion
25 limitations.

1 I saw the one last night on Order 5. I have
2 the one here on Order 7 that we got off the table
3 back there, but I didn't see the one on Order 5.

4 The one on Order 7, the way I read it, would
5 have changed average price by about 25 cents for
6 Order 7. I think for Order 5 it was about 50
7 cents by changing those diversion limitations.

8 If we could consistently add 50 cents from
9 diversion limitations to Order 5 producers, we
10 would be making an impact. And I guess myself as
11 an Order 5 producer, that's certainly what I'm
12 going to refer to primarily today.

13 The differential adjustment that has been
14 proposed is certainly much more helpful for
15 Order 6 and 7 than it is for Order 5. So when we
16 get down to, really, the proposal at hand, we have
17 today for what's it's going to do for Order 5, as
18 it's been alluded to already, maybe we'll add 25
19 cents in the North Carolina area where I'm from,
20 and then the Kentucky area may not add anything,
21 if very little.

22 As a veterinarian, when I'm going to go out
23 on the farm in the next few months -- maybe this
24 has been past -- and someone, a client, is going
25 to ask me when we get through with our work that

1 day, Well, I read that this DCMA proposal has gone
2 through. What is that going to mean to us?

3 And I say, Well, I think it might mean 25
4 cents, but we're not really sure about that.

5 But thinking in what Mr. Jefferson alluded
6 to, if we do get a high -- higher differentials,
7 we really are not assured that we will not lose
8 over-order premium at the same time. So in net
9 mailbox money, which is what really matters, we're
10 really not sure how much this is going to do for
11 Federal Order 5.

12 I'm not really sure -- we're pretty certain
13 it's not going to do enough to change production
14 trends in Federal Order 5. So we're going to be
15 back faced with the same situation. And the way
16 the situation works right now, the way I
17 understand it -- and, like I say, a lot of us
18 don't understand the whole thing.

19 But I think most people -- most producers do
20 understand that as the more deficit we become, the
21 less producers there are, and the more milk has to
22 come in, and we have to pay for our share of that
23 to supply the market, the last man standing is
24 going to have a pretty heavy burden there. He's
25 going to have to milk a whole lot of cows to be

1 able to cover and survive in the system that we
2 operate under today.

3 U.S. Milk, in representing the Southeast and
4 in its involvement with the Southeastern Steering
5 Committee, does support the proposal. We're not
6 here to say we don't support it, because it is
7 doing something. I think it's a move in the right
8 direction. I think specifically for Federal
9 Order 5, it's not doing enough to really get where
10 we need to be.

11 So in my opinion -- like I say, we can get
12 some economists to analyze this, but I think
13 you're really going to have to do something that's
14 going to get a dollar to a dollar and a half
15 consistently in the mailbox price through the hard
16 times.

17 Now, we're going to approach some \$18 or \$20
18 milk here for the next little bit, and everybody
19 is going to be real happy and quit complaining
20 about everything. But we usually know what
21 happens shortly after \$18 or \$20 milk. We have
22 some \$12 and \$13 milk, and everybody wonders how
23 they're going to make it to the next milk check.

24 So my concern is that most dairyman in
25 Order 5 will be told, you know, this proposal has

1 really done something for us, and we're
2 approaching these high prices, and we really
3 haven't done that much.

4 If the USDA really wants to fix the problems,
5 I think the diversions is the only way we're going
6 to really tighten it up. We're going to try to
7 get back to a level playing field. I think
8 producers in my area would say that's all they
9 want.

10 If we know milk 500 to 1,000 miles away,
11 wherever it's got to come from to supply this
12 market, we know that price there, and we know what
13 it costs to get it here, then we're looking to
14 get -- that our local milk should have somewhere
15 close to that value. Okay?

16 That's the way everything else I buy is. If
17 I've got to buy hominy out of Indiana, they price
18 it to me there, and they tell me how much freight
19 it's going to be to get here. The same way with
20 alfalfa hay . I think milk would be the same way.
21 And that's the market. That's the price that we
22 pay in our area for it. So it looks like our milk
23 should have the same value in our local market
24 just like any other commodity.

25 Thinking of Mr. Sims' comments, a lot of what

1 he said was that the market is here to attract to
2 the market. And that's true. We are attracting
3 milk to the market.

4 My point is I would like for us to try to
5 look for the way that we grow the local market
6 from the price that local milk is worth versus
7 taking dollars to bring milk from 500 to 1,000
8 miles away.

9 I thank you for this opportunity to be here.
10 I appreciate your efforts. I don't want to
11 downplay them. I just feel like we're going to
12 have to do more, specifically for Federal Order 5
13 for me to be able to go back home and tell those
14 producers that I think we've done something that's
15 really going to make a difference.

16 JUDGE HILLSON: Mr. Smith, do you have any
17 questions?

18 MR. SMITH: I do not.

19 JUDGE HILLSON: Does anyone else have
20 questions? Go ahead, Mr. English.

21 CROSS-EXAMINATION

22 BY MR. ENGLISH:

23 Q. Thank you, Mr. Shelton, for being here. My
24 name is Charles English, and I represent Dean Foods
25 Company and National Dairy Holdings.

1 You referenced a proposal that your
2 organization made regarding diversions that was
3 rejected by USDA.

4 A. Yes.

5 Q. What was your proposal, do you remember?

6 A. I could get a copy of it for you. But we
7 are -- we proposed that we change the diversion limits
8 to be -- I can't tell you if I know that they were
9 identical to Federal Order 6 but I know they would be
10 more in line with Federal Order 6 in terms of touchbase
11 and diversion limitations.

12 Q. And did you do that because you believe that
13 what Florida was doing was working for Florida?

14 A. That's our opinion, yes.

15 Q. Okay. When did this happen?

16 A. We met with the USDA, if I'm not mistaken, in
17 October of '06. I believe we had our proposal in, I
18 believe, by December of '06. I do have a letter here
19 dated December 22nd from Sue Mosley, where she sent it
20 out to interested parties of the Southeastern marketing
21 area concerning this proposal.

22 So we got it in December. Comments were to
23 be submitted by February the 16th of '07. I don't have
24 the letter, and I can't tell you the date that it was
25 rejected. It was sometime, if I'm not mistaken, March

1 or April.

2 Q. Do you recall whether you were asking for a
3 hearing or asking the market administrator to exercise
4 discretion to lower --

5 A. My understanding of the process, we were
6 asking the market administrator to make that decision.

7 Q. Okay. Do you understand that today the issue
8 of diversions is open?

9 A. The way I understand it -- now, I don't claim
10 to have -- know this specifically -- but I understand
11 that, yes, a diversion proposal has been made, but it
12 is not as tight a diversion proposal as what we
13 proposed in our proposal.

14 Q. Do you understand that modifications of
15 existing proposals are permitted?

16 A. I guess I did not realize that, no.

17 Q. Okay.

18 A. I thought this was kind of a cut-and-dry deal
19 here.

20 Q. Okay. Well, we hope it's not.

21 A. Okay.

22 Q. But --

23 A. Well, we --

24 Q. And the Department will tell you it's not a
25 cut-and-dry deal.

1 A. Well, we hope we're going to make a
2 difference, then?

3 Q. Well, I think that that's why people are
4 here.

5 A. Okay.

6 Q. And so if you understand, now, that you are
7 permitted to actually speak to diversion limits that
8 are different from what is actually proposed, would you
9 like the Department to consider the material that you
10 submitted back in October as part of this hearing?

11 A. Yes. I would like for the Department to
12 review the proposal that we admitted initially, study
13 that. Of course, it looks like we've already got -- it
14 looks like we've already got a study of it. We've got,
15 from the market administrator's office, the way I
16 understand it from Federal Orders 5 and 7, what this
17 would do by changing the diversion limits.

18 Q. Assuming that what you proposed was similar
19 to what Dean is suggesting now as a modification, then
20 that would be correct.

21 A. And if I'm -- if I'm not mistaken, I think
22 the proposals are very similar.

23 Q. So the bottom line is you support diversion
24 limits even lower than those proposed by DCMA?

25 A. Yes.

1 MR. ENGLISH: Thank you, sir.

2 JUDGE HILLSON: Mr. Beshore?

3 CROSS-EXAMINATION

4 BY MR. BESHORE:

5 Q. Good morning, Dr. Shelton. My name is Marvin
6 Beshore, and I represent DCMA in this hearing.

7 Can you tell us a little bit about Upper
8 South Milk Producers Association? Is that -- is
9 that -- what type of organization is it?

10 A. It's strictly an association. We do not
11 market milk. I would compare it to Georgia Milk
12 Producers Association, North Carolina Dairy Producers
13 Association, Western United Dairymen Association in the
14 California area.

15 As I stated, our goal was really to try to
16 educate ourselves. We have looked into, similar to
17 Kentucky Dairy Council, dairy development council, a
18 way to attract milk to the Southeastern area. We
19 obviously have not made a lot of headway on that at
20 this time, but it's still on the radar.

21 Q. You also mentioned an organization called
22 U.S. Milk.

23 A. U.S. Milk is the same as -- we refer to that
24 as Upper South Milk Producers, yes.

25 Q. So they're one and the same?

1 A. Yes, sir.

2 Q. Okay.

3 A. Yes.

4 Q. Now, do you understand what you -- what a
5 diversion is under the order?

6 Or let me ask you, What do you understand the
7 diversion to be under the order?

8 A. Well, understanding -- my understanding of
9 the pooling and diversion concept is that milk that is
10 really not sold in our area still receives our price.
11 It's the ability of that milk to -- from what I glean
12 from our federal order study that day was that the
13 dollars are moving east to west due to diverted and
14 pooled milk.

15 Q. Okay. So your understanding of diversions
16 are milk movements outside your area, which
17 nevertheless capture -- are capturing the blend price
18 in your area?

19 A. Yes. I've never understood why milk that
20 stayed in Texas needs to be benefitted by me being in
21 North Carolina in a deficit market. Maybe I don't
22 understand it more or less, but I know from what people
23 that seem to know a lot more about it than I do tell me
24 it costs me money.

25 Q. Are you aware that there may be diversions

1 within your area and that there are diversions within
2 the area?

3 A. I can't say that I really understand that
4 concept enough to comment on it.

5 Q. Okay. One of the -- some of the information
6 that's been provided by market administration in
7 Federal Order 5, in Exhibit 9, page 2 of 13, it shows
8 the differences -- it shows the daily demands for milk
9 of all the distributing plants in Order 5. And it
10 shows the variations from day to day.

11 Have you seen --

12 A. I have not seen that, no.

13 Q. Okay.

14 A. I understand there is quite a bit of
15 variation in supply and demand from the plants, yes.

16 Q. Okay. Let me just -- I'm just taking the
17 first month of the data, which is January of 2004.

18 On the 9th of January 2004, the distributing
19 plants of Order 5 required 15,510,769 pounds of --
20 pounds of milk, and that was the high demand point in
21 the month. Okay?

22 A. (Indicates affirmatively).

23 Q. And on the 25th of the month -- this is
24 January 2004 -- they only required 10,022,289 pounds of
25 milk, according to the market administrator's data.

1 Now, that's only about two thirds of the milk on the
2 low day as required on the high day.

3 You're not involved in marketing, but
4 somebody is, cooperatives primarily. You understand
5 that something has to happen to the milk that's not
6 required under the 25th by the distributing --

7 A. Well, I would understand kind of a simplistic
8 approach. This may not be the way it is. You usually
9 have to store it or you have to take it to a balancing
10 plant.

11 Q. Okay. And storing fresh milk, you can't
12 store it for very long?

13 A. Not too long.

14 Q. Okay. By the way, cows' production is
15 generally equal from day to day --

16 A. Yes.

17 Q. -- correct --

18 A. (Indicates affirmatively).

19 Q. -- on the farm?

20 Okay. Would you be aware that those
21 movements to a balancing plant are typically
22 diversions?

23 A. No, I did not understand that as a diversion.

24 Q. Okay. You would agree, would you not, that
25 the milk of the producers who happen to be involved in

1 not being needed on the low day of demand,
2 nevertheless, are entitled to be part of a pool?

3 A. Say that again.

4 Q. That when the milk from whatever farms it
5 comes from, the milk that's not needed on the low days
6 by the pool plants, by the handlers, that milk is
7 nevertheless part of the -- of the supply for the
8 order, or the pool?

9 A. That's the way it is. I'm not sure that I
10 really understand the real economics that it really
11 needs to be that way. If I don't need hominy, I don't
12 need it, so I don't pay for it out there.

13 Q. Well, let's just -- let's just look at this
14 month.

15 Say all the milk supplied to a given plant in
16 Order 5 is coming from North Carolina -- I'm sure that
17 might happen in some plant -- and that North Carolina
18 plant only needs two thirds of the North Carolina farms
19 on one day --

20 A. Uh-huh (Indicates affirmatively).

21 Q. -- and it needs all of their demand on
22 another day.

23 A. Uh-huh (Indicates affirmatively).

24 Q. Okay? Now, let's -- assume with me that the
25 concept of diversions allows all of the milk of all the

1 farms to be pooled for the month, to share in blend
2 price for the month, because they're needed some days
3 to meet the market at least. Okay?

4 A. Uh-huh (Indicates affirmatively).

5 Q. Is that a fair system in your view? That's
6 the way it works now.

7 A. Yeah, that's the way it works now. And if we
8 can only supply half the plant's production, I don't
9 really see that as my problem. Maybe I should see it
10 as my problem, but I really don't.

11 If they need a lot of milk and I've got --
12 and I'm sending them all the milk I can make and they
13 still don't have enough, then I'm not sure that's
14 really my problem.

15 Q. What if they don't need your milk one day?
16 Whose problem is that?

17 A. That's my problem.

18 Q. Okay. And is it your view that you shouldn't
19 be -- if your milk is needed five days and not needed
20 two days, then two days worth shouldn't be part of the
21 order?

22 A. I better find a home for it.

23 Q. And if that home is not a pooled plant, you
24 will take a Class 3 or Class 4 price?

25 A. I guess if we were to that situation, that's

1 what I would have to do.

2 Q. Okay. Is that what you're advocating for
3 the -- advocating for this, for Order 5?

4 A. Well, I'm saying that I think we're still
5 operating on the rules of when we had too much milk in
6 our area, and now we don't have enough milk in our
7 area. Is that -- is that -- you know, that may not fit
8 the economic deal there, but, you know, from a simple
9 veterinarianian standpoint and a dairy farmer, that's kind
10 of the way it works.

11 Q. Let me ask just one other question. Do you
12 know -- your acquaintances or family in Michigan --

13 A. My client's family, yes, in Michigan, yes.

14 Q. Client's family in Michigan?

15 A. Yeah.

16 Q. You've compared bulk price, and whatnot,
17 between them. And sometimes they're quite close to
18 prices in North Carolina, as you indicated?

19 A. Yes. Sometimes higher, sometimes lower, but
20 pretty close.

21 Q. Do you have any idea what the diversion
22 limits are on the pooling of milk in Michigan?

23 A. I have no idea.

24 Q. If I represented to you that they're much
25 more liberal, lenient than they are in your order,

1 would that change your thinking at all about the
2 diversion?

3 A. Well, I guess the difference I would see in
4 Michigan is they have too much milk, and we don't have
5 enough. So they probably do need a different set of
6 rules than we do.

7 Q. But their price under that separate --
8 separate set of rules is comparable to yours. So the
9 rules might not be -- diversion rules don't necessarily
10 generate lower prices, fair?

11 A. I really don't know. All I know is that it
12 doesn't make sense to me when there is not enough milk
13 you get less money. It looks like if you're in a
14 deficit market, it should have value. Local milk
15 should have value if you're in a deficit market.

16 Q. Okay.

17 A. When my milk is 50 miles from the plant, it
18 looks like it would be worth just as much, if not more,
19 than milk that is 5- or 600 miles away from the plant.

20 Q. Are you asserting that it's not worth more
21 today under the orders? Is that your understanding?

22 A. If the people in Michigan can get just about
23 as much as I can get 5- or 600 miles away, it seems
24 like there is something a little bit out of whack
25 there.

1 Q. How about your order, I mean, your -- the
2 milk that's distant from your order that gets pooled,
3 it gets less. Do you understand that?

4 A. The milk that's distant from my order?

5 Q. I'm sorry. Distant from your location. Milk
6 that's in Virginia, let's say --

7 A. I understand --

8 Q. -- gets a lower price.

9 A. I realize there is differences in the
10 differentials getting across there, yes.

11 Q. They get a lower price?

12 A. Uh-huh (Indicates affirmatively). I
13 understand that.

14 MR. BESHORE: Okay. Okay. Thank you.

15 JUDGE HILLSON: Any further cross-examination
16 of Dr. Shelton? Any redirect?

17 MR. SMITH: No, Your Honor.

18 JUDGE HILLSON: Okay. Thank you, Doctor.
19 You may step down.

20 THE WITNESS: Thank you.

21 JUDGE HILLSON: Mr. Smith, you may call your
22 next witness.

23 MR. SMITH: Dan Smith. The next witness is
24 Leigh Lane. Mr. Lane will also express his
25 statement for the record without a written

1 statement.

2 JUDGE HILLSON: Raise your right hand.

3 LEIGH LANE,

4 the witness herein, being first duly sworn on oath, was
5 questioned and testified as follows:

6 JUDGE HILLSON: Would you please state your
7 name and spell it for the record.

8 STATEMENT BY LEIGH LANE

9 THE WITNESS: My name is Leigh Lane. And
10 that's L-e-i-g-h, L-a-n-e.

11 My name is Leigh Lane. I'm testifying on
12 behalf of North Carolina Farm Bureau as the
13 chairman of the Dairy Advisory Committee and also
14 as DFA producer in North Carolina.

15 My wife and I own and operate a 170-cow
16 dairy, have for the last 22 years. We ship
17 mostly -- or all the plants regulated under
18 Order 5, and we support the proposal submitted by
19 DCMA for changes in the Class 1 differentials in
20 Order 5, 6, and 7 and to modify some of the
21 pooling rules.

22 JUDGE HILLSON: Sir, will you talk more in
23 the microphone, please?

24 THE WITNESS: I'm sorry.

25 I wish to call attention to the trends in

1 production and population in the main states
2 located in Order 5, which are Kentucky, North
3 Carolina, South Carolina, Tennessee, and Virginia.

4 USDA data show a persistent decline in the
5 milk production in the region. And using 1989 as
6 the starting point, because that year was the
7 first year we saw a significant increase in the
8 volatility in farm prices, the decline has been
9 dramatic.

10 I should point out that significant amounts
11 of milk in Tennessee and Virginia move into other
12 markets.

13 The population in these states is increasing.
14 The population has grown from two-point -- 24.9
15 million in 1990 to 31.1 million in 2006, which is
16 an increase of 25 percent. And the milk
17 production has decreased 35 percent over the same
18 period.

19 Order 5 is a deficit market. The per capita
20 milk production is low and is decreasing. It's
21 decreased from 332 pounds in 1990 to 172 pounds in
22 2006.

23 This is not enough to even meet the fluid
24 needs in the market, which is around 180 pounds
25 per person. It requires almost 600 pounds per

1 minute to meet the total dairy product needs of
2 the consumers.

3 There has been a sharp decline in the per
4 capita milk production in each of those states
5 from 1990 to 2006. I feel like the local milk is
6 worth more now than it was 2000, when Order 5 was
7 created, and increases in the minimum Class 1
8 price are justified. The transportation costs
9 have increased approximately 20 percent from
10 January 2000 to the present based on the Bureau of
11 Labor Statistics, producer price index for general
12 freight in truck load lots. While the index did
13 not specifically cover milk hauling, I would
14 expect the cost would be similar.

15 While the -- we realize that proposed changes
16 should put some money in the producers' pockets,
17 the proposed changes are not enough.

18 Based on DCMA's prediction of the financial
19 impacts in Order 5 of 26 cents, I can tell you as
20 a producer that more is needed to reduce or
21 reverse the trends of production we are seeing.

22 My son, my oldest son, went to college and
23 always claimed that he wanted to be a dairy
24 farmer. He came back to the farm after college
25 and spent four years with us. During the downturn

1 of 2002, 2003, he became quite discouraged about
2 his future prospects to be able to stay on the
3 farm for the next 30 or 40 years, which would be
4 his career. And he's now an officer in the
5 U.S. Army.

6 So in order to change these production
7 trends, we're going to have to be able to
8 encourage young people to stay on the farm. And I
9 don't think we're getting it done right now with
10 the prices that we're seeing and the price -- the
11 trends in production are not going to be improved
12 with the 26 cents.

13 In addition to the supply issues, I'd also
14 like to note that Class 1 utilization in Order 5
15 has remained unchanged since this order was
16 created in January of 2005. During this period,
17 Class 1 sales in the order have been fairly
18 consistent based on the market administrator's
19 office.

20 While the local production has declined
21 dramatically, however, the proportionate milk used
22 in Class 1 uses has not changed. This raises the
23 issue of whether the orders are fulfilling the
24 intended purpose.

25 In short, we believe that the situation in

1 Order 5 and, indeed, the region served by the
2 three orders is serious, and we urge USDA to
3 conduct or sponsor an in-depth study in the
4 order -- in order that the problems can be
5 identified correctly to identify additional
6 measures that might be taken and to evaluate the
7 impact of these measures. We feel like this study
8 should be conducted as soon as possible and the
9 results be made publicly available.

10 For these reasons, I support the DCMA
11 proposal but would like to see further changes
12 made in the future.

13 Thank you for allowing me to testify.

14 JUDGE HILLSON: Any further questions,
15 Mr. Smith?

16 MR. SMITH: No, Your Honor.

17 JUDGE HILLSON: Anyone wish to ask questions
18 of this witness?

19 Okay. Mr. Lane, you may step down. And
20 thank you for testifying.

21 THE WITNESS: Thank you.

22 JUDGE HILLSON: And you may call your next
23 witness, Mr. Smith.

24 MR. SMITH: Bill Crist.

25 JUDGE HILLSON: Raise your right hand.

1 WILLIAM L. CRIST, SR.,
2 the witness herein, being first duly sworn on oath, was
3 questioned and testified as follows:

4 JUDGE HILLSON: Please state your name and
5 spell it for the record.

6 THE WITNESS: It's William L. Crist, Sr., and
7 it's C-r-i-s-t.

8 JUDGE HILLSON: Okay. Do you have any
9 questions you want to ask him or do you want him
10 to read the statement?

11 MR. SMITH: Shall we mark his statement?

12 JUDGE HILLSON: Okay. I'll mark Mr. Crist's
13 statement as Exhibit 26.

14 MR. SMITH: Mr. Crist, would you like to read
15 your statement for the record?

16 THE WITNESS: Certainly.

17 STATEMENT BY WILLIAM L. CRIST, SR.

18 THE WITNESS: My name is Bill Crist. I have
19 served as an extension professor and dairy
20 extension specialist with the University of
21 Kentucky since 1978 and am still in a dairy
22 specialist position one quarter time until my
23 replacement comes on board in January 2008.

24 I received a Ph.D. in physiology of
25 reproduction from the Ohio State University in

1 1970. My professional areas of emphasis are
2 mastitis control, milking management, and dairy
3 facility layout.

4 I'm testifying today primarily in my capacity
5 as a Kentucky dairy farmer, however, rather than
6 as an extension dairy specialist.

7 My son and I are partners on two dairies that
8 we lease near Glasgow, Kentucky, and my son is the
9 primary manager on these farms.

10 The first dairy we have 230 cows, milking
11 around 200 of those, and we have 200 heifers that
12 are being custom raised for us. We own the cows
13 and the feeding equipment. We lease the parlor,
14 the feed barn, and the pasture. All of our feed
15 is purchased.

16 We started leasing the second farm in March
17 of this year, and we have 340 cows on this farm
18 and about 300 of those cows are being milked.
19 Again, the parlor, free stall barn, and pasture
20 are leased, and all the feed is purchased.

21 We sell milk to Lone Star Milk Producers and
22 are pooled in Federal Order 7.

23 I'm also testifying on behalf of the Kentucky
24 Dairy Development Council. KDDC represents all
25 elements of the Kentucky dairy industry and has as

1 its mission to educate, promote, and represent
2 dairy producers and foster an environment for
3 growth of the Kentucky dairy industry.

4 I am here to testify in support of the
5 proposal by the Dairy Cooperative Marketing
6 Association, Inc. The proposal will increase the
7 producer income and begin to rationalize the
8 pooling structure of the three market orders that
9 control pricing and pooling for our dairy
10 marketplace in the Southeast. Both of these are
11 critical, vital steps towards enabling the South's
12 dairy farmers to stay in operation and continue to
13 supply the market and thereby assuring the
14 continued vitality of our region's dairy industry
15 for the future.

16 Also, as developed further below, we believe
17 that the circumstance warrants emergency action by
18 the Department.

19 It goes without saying that the dairy
20 industry is in crisis here in the Southeast. As
21 noted in the DCMA proposal, during the period 1986
22 through 2006, milk production in the 12
23 Southeastern states has declined from 18.3 billion
24 pounds to just under 12 billion pounds. Simply
25 put, we are experiencing a decimation of the

1 region's milk supply.

2 Certainly, the Southeast has historically
3 been a deficit region and depended on the
4 importation of milk from surplus regions to ensure
5 the stability of its milk supply. Yet, the
6 stability of the very base of the South's milk
7 supply is now under grave threat.

8 The situation is nothing less than dire in
9 Kentucky. Between 1990 and 2004, milk production
10 in Kentucky declined from 2.25 billion pounds to
11 1.42 billion pounds, for a decrease of fully one
12 third. This reduction in supply runs completely
13 contrary to the basic economic laws of supply and
14 demand.

15 If ever there are such laws in operation and
16 if they are, indeed, supposed to act as the
17 underpinning for the federal order system, a
18 decline in supply should be precipitated by, or at
19 least correspond somehow with, a decline in
20 demand. Yet our region has experienced instead a
21 period of explosive population growth and so a
22 tremendous corresponding increase in the region's
23 demand for milk. In Kentucky alone, the
24 population increased fully 10 percent between 1990
25 and 2000.

1 In combination, the reduction of local supply
2 and increase in demand has placed tremendous
3 pressure on the region's surplus supply areas and,
4 hence, the need for this hearing. DCMA's
5 proposal, on page 3, identifies the structure
6 problems with current federal minimum pricing as
7 follows.

8 Simply put, the Class 1 price surface as
9 currently established under the orders is failing
10 to offer sufficient economic incentives to move
11 milk into the Southeast from the reserve supply
12 areas and is failing to encourage local production
13 within the Southeast.

14 The proposal directly confronts these
15 problems with amendments to pooling and
16 transportation provisions, as well as increases in
17 the region's Class 1 price surface. These are
18 critical first steps toward restoring the
19 stability and a proper balance of the pool. And
20 KDDC supports them for these reasons.

21 Most importantly, KDDC supports the proposal
22 because it has as a central premise the
23 restoration of the region's ability to provide its
24 own basic milk supply.

25 Under the proposal, the Class 1 price surface

1 is raised in the region as a direct incentive to
2 encourage greater local production. Revision of
3 the pooling provisions also has this incentive as
4 its aim by the attempt to eliminate uneconomic
5 incentives for the irrational importation of milk.

6 These changes place the proper emphasis on
7 the production of local milk as being the most
8 rational basis of stability for the region's base
9 supply.

10 KDDC also welcomes the proposal's suggestion
11 that this hearing be used to determine the most
12 appropriate level of allowable diversions. See
13 page 5 of the proposal.

14 As noted, the proper amount of diverted or
15 supplemental milk needed to balance the market has
16 been the subject of much discussion leading up to
17 the hearing. Based on the formal testimony now
18 received, the Department will be in the right
19 position to best sort out this issue.

20 The KDDC also notes that DCMA's proposal
21 identifies the importance of the market
22 administrator's continued authority to adjust
23 diversion limits.

24 Once again, this makes clear that the proper
25 levels for diversion needs to be constantly

1 monitored and adjusted as necessary to eliminate
2 the uneconomic incentives for bringing milk into
3 the Southeast marketplace.

4 We also understand the rationale for the
5 proposed reduction in touchbase provisions. The
6 market order administrators will still retain
7 their authority to review these requirements, and
8 we believe, nonetheless, that this is still
9 important.

10 KDDC also supports that the transportation
11 credit provision amendments, recognizing the
12 importance of these amendments to the overall
13 proposal or the necessity to rationalize the
14 process for bringing in surplus milk in addition
15 to enhancing incentives for local production.

16 I close with a particular note of caution for
17 the future of the Kentucky dairy industry, which
18 should be of particular concern for this hearing.
19 The subject of this hearing is the continued
20 maintenance and adequacy of the region's supply of
21 milk for processing plants regulated under the
22 Southeast orders. A substantial portion of this
23 processing base is located in Kentucky.

24 Kentucky processors provide upwards of 20
25 percent of the total output of the two Southeast

1 orders most immediately associated with Kentucky.
2 They are packaging more than twice the volume of
3 milk consumed by Kentuckians.

4 The long-term stability of the Southeast's
5 supply of milk, in other words, is largely
6 dependent on the ability of these primarily
7 exporting plants to continue to source a stable
8 supply of milk in the region.

9 Yet Kentucky dairy producers, being located
10 closest and thereby best suited to supply these
11 plants under the basic principles of milk
12 marketing regulation, continue to be forced out of
13 business in droves by inadequate minimum pay
14 prices established under our federal orders.

15 The current proposal promises only marginal
16 relief to Kentucky producers, and this is of great
17 concern to KDDC.

18 Being on the northern edge of the region, the
19 closest to a key part of the region's processing
20 base, the net return for the proposed changes to
21 the Class 1 surface will yield a very limited
22 return to our producers.

23 We certainly recognize the need to retain
24 alignment between the southern orders and the
25 adjacent orders to the north and understand how

1 being on the border puts us in a precarious
2 position.

3 We also understand from the Department's
4 notice, however, that this hearing is for the
5 purpose of temporarily adjusting the Class 1
6 pricing surface for each county within each of the
7 three milk marketing orders until such time that
8 the Department is able to comprehensively address
9 the Class 1 pricing surface on a national scale.

10 Much as we urge emergency action on the DCMA
11 proposal, we further urge the Department to
12 proceed without delay with its plan for
13 comprehensive review of the national pricing
14 picture. There is certainly no time for delay in
15 Kentucky and, I believe, through the Southeast.

16 In closing, I would note that the Kentucky
17 Department Dairy Council Board of Directors, on
18 behalf of approximately 400 Kentucky producers and
19 allied industries, has voted to support the
20 concepts contained in the DCMA proposal being
21 considered in this hearing. The board also
22 expressed the hope that the proposal could be
23 enhanced in a way that would be of greater benefit
24 for Kentucky producers.

25 Thank you for very much for your

1 consideration of my testimony, and I'd be happy to
2 try to answer any questions anybody might have.

3 JUDGE HILLSON: Okay. Mr. Smith, do you have
4 any questions?

5 MR. SMITH: I do not. Thank you, Your Honor.

6 JUDGE HILLSON: Does anyone else have any
7 questions? Mr. Beshore?

8 CROSS-EXAMINATION

9 BY MR. BESHORE:

10 Q. Good morning, Dr. Crist. Thank you for your
11 testimony and support.

12 A. Good morning.

13 Q. I have just a couple questions for
14 clarification.

15 On the third page of your testimony, about
16 the middle of the page, the paragraph that begins, KDDC
17 also welcomes the proposal suggestion that the hearing
18 be used to determine the appropriate level of allowable
19 diversions.

20 Do you see that paragraph?

21 A. Yes.

22 Q. Okay. Then the next sentence, it says, See
23 page 5 of the proposal.

24 What are you referring there in terms of when
25 you say the proposal on page 5, just for clarification?

1 A. That was a DCMA proposal, I believe, is where
2 that came from.

3 Q. What document? Is that -- was that like
4 Mr. Sims' testimony statement, or is that a different
5 document?

6 A. I believe that was. Can I ask for some --

7 Q. Sure. I just want the testimony to be clear
8 with respect to what you are referencing here.

9 MR. THOMAS: Judge, I'm Roger Thomas with the
10 Kentucky Dairy Development Council, executive
11 director. Could I --

12 JUDGE HILLSON: If you can answer without
13 having to be sworn in, if it's -- just as a point
14 of reference.

15 MR. THOMAS: Sure. That language was
16 contained in the original draft that we had
17 possession of, and it was on page 5.

18 JUDGE HILLSON: Whose original draft are you
19 talking about?

20 MR. THOMAS: Not the proposal presented at
21 this hearing.

22 MR. SMITH: It's the draft letter submitted
23 by DCMA to the secretary. That was then --

24 MR. BESHORE: It was in the letter requesting
25 the hearing?

1 MR. SMITH: Yes.

2 MR. BESHORE: Okay. And that's on the -- on
3 the USDA -- on the hearing website, I think.

4 JUDGE HILLSON: That's something that's part
5 of record, I think, in this case.

6 MR. SMITH: Yes. It's on the website.

7 JUDGE HILLSON: If it's not, the record will
8 take official notice of it.

9 MR. BESHORE: Okay. It's the request for
10 hearing.

11 JUDGE HILLSON: Okay.

12 MR. BESHORE: Okay. That's helpful in
13 clarifying the reference there.

14 BY MR. BESHORE:

15 Q. Now, on the next page, page 4, Dr. Crist, you
16 make the comment that Kentucky processors provide
17 upwards of 20 percent of the total output of the two
18 Southeast orders most immediately associated with
19 Kentucky.

20 Can you tell us a little more about how
21 you -- how you made that calculation or what the basis
22 for that calculation is?

23 A. Well, just in the two federal orders, 5 and
24 7, that they provide upwards of 20 percent of the total
25 output of the Southeast orders.

1 Q. Was there -- is there some publication by the
2 market administrators which indicated how much of the
3 processing volume was originating with Kentucky?

4 A. Well, just the volume of milk from Kentucky
5 is all. I don't know what milk goes to particular
6 plants but just the volume of the milk from Kentucky.
7 So maybe that's an overstatement. I'm not sure about
8 that.

9 Q. Okay. In any event, you're referring to the
10 production volumes --

11 A. Yes.

12 Q. -- at the farm level --

13 A. Right, right.

14 Q. -- at the farm level in Kentucky?

15 A. Yes, uh-huh (Indicates affirmatively).

16 MR. BESHORE: Okay. Thank you.

17 JUDGE HILLSON: Mr. English?

18 MR. ENGLISH: Charles English for Dean Foods
19 Company and National Dairy Holdings.

20 CROSS-EXAMINATION

21 BY MR. ENGLISH:

22 Q. Dr. Crist, just a few questions here.

23 First, do you know where your milk is
24 marketed, what operations?

25 A. I think most of it goes to Dean plants in

1 Nashville.

2 Q. Okay. And what led you and your son to lease
3 a second farm in March of this year in this market
4 that's a disaster?

5 A. Yes. My reason for leasing a second farm is
6 because I have a son that is energetic and wants to
7 milk more cows and needs to milk more cows in order to
8 make enough living to send my three granddaughters to
9 college some day. That's my -- that's my reason.
10 That's my primary reason for doing it.

11 I asked my son that the other day. I said,
12 Son, why did we do this? That's after we had started
13 this operation. In the first week of March, we brought
14 in 340 cows. And the next three weeks, I lost ten
15 pounds, and so, see, it's good for you. It's very --
16 it's very good for you.

17 But I asked my son, Son, why did we do this?
18 And his response was, Well, Dad, I thought
19 you had to have something to do when you retired.

20 So we had a little communication problem
21 there. But, no, I -- it's from the fact that he is
22 energetic. He wants to milk more cows. And it's the
23 fact that we sincerely believe that we can make money
24 on the operations, but you have to milk more and more
25 cows all the time in order to make a decent income.

1 And, of course, it's a challenge. It's one that I'm
2 certainly looking forward to as well.

3 Q. Was this --

4 A. Excuse me. 2006 was a very difficult year.

5 Q. Sure. Yeah. Was this a brand new dairy
6 farm, or did you purchase -- or lease this from
7 somebody else who had been dairy farming?

8 A. We leased this from somebody else. It's
9 about three miles from our other dairy that we lease.
10 We don't own any land. And I'd love to own land. We
11 looked at a farm this last fall to purchase, and -- but
12 by the time you purchase the farm and then you add
13 buildings and then cows, you don't have any money to
14 buy cows. No money to -- you can't even --

15 But, anyway, no. The second farm is a lease
16 farm. And the reason that the dairyman sold his cows
17 last December was the fact that he was just really
18 upset. He was tired with the price of milk being up
19 and down so much and, certainly, 2006 being a very
20 difficult year for him. And he just decided to sell
21 his cows. And he's an excellent dairyman. He was an
22 excellent dairyman.

23 Q. Did he sell his cows in the hundredweight
24 program?

25 A. No, no. They went -- they went north

1 somewhere, but he sold them as an entire herd.

2 Q. But -- so you didn't buy his --

3 A. No. We didn't -- we weren't even considering
4 leasing his facility at that time when he sold. That
5 came about since then.

6 Q. Do you know any dairy farmers in your area
7 who have participated in the hundredweight program?

8 A. No. I had heard that there was a couple in
9 the northern part of Kentucky, but I don't even know
10 who those are. We have very few that have gone out in
11 the CWT program.

12 Q. And just for clarity of the record: What is
13 the CWT program, to your knowledge?

14 A. Well, that's the program where producers --
15 many producers are paying in like -- I think it's 10
16 cents a hundredweight now. It was a nickel. And now
17 it's 10 cents a hundredweight now. And then cattle are
18 then purchased every so often. They'll have a program
19 where dairy farmers can bid in terms of being able to
20 sell their cows for beef to reduce the number of cows,
21 to reduce the production level in the country, to try
22 to maintain our price level.

23 Q. And is some of that reduction also done
24 through Lone Star? Does Lone Star participate in the
25 hundredweight program?

1 A. It's not required, but we do participate in
2 it, I mean, we as a farm. The Crist farm --

3 Q. Right.

4 A. -- does participate in it, yes.

5 Q. And does Lone Star as a cooperative
6 participate in it?

7 A. I think that they do. Now, it's not -- to my
8 knowledge, it's not required that you have to.

9 MR. ENGLISH: Okay. Thank you very much.

10 JUDGE HILLSON: Any further questions of this
11 witness?

12 MR. SMITH: (Indicates negatively).

13 JUDGE HILLSON: Okay. I'm going to receive
14 Exhibit 26 into evidence.

15 (Exhibit No. 26 received.)

16 JUDGE HILLSON: You may step down. I note
17 that it's noon. I don't know -- everyone thinks
18 it's a good time for lunch.

19 I'm not sure about what's around here, but
20 would an hour and a quarter be a reasonable time
21 for lunch and come back at 1:15? Do you think
22 that will work for everybody? We'll come back at
23 1:15.

24 And, Mr. Smith, you have one more witness to
25 call?

1 MR. SMITH: One more witness, yes.

2 JUDGE HILLSON: And then we'll finish with
3 Mr. Sims, and then, I guess, it will be
4 Mr. English calling your witnesses.

5 MR. ENGLISH: If they're here.

6 MR. BESHORE: We have two more.

7 JUDGE HILLSON: You have two more after that.

8 MR. BESHORE: Yes.

9 MR. ENGLISH: We're going fast.

10 JUDGE HILLSON: Okay. Back at 1:15.

11 (A lunch recess was taken.)

P R O C E E D I N G S

1
2 JUDGE HILLSON: Okay. Let's get seated so we
3 can get started, please. Okay. We can go back on
4 the record.

5 Mr. Smith, you have one more witness that you
6 wanted to call; is that correct?

7 MR. SMITH: Dan Smith.

8 Tom Thompson, Your Honor.

9 JUDGE HILLSON: Did Mr. Thompson have a
10 written statement that he wants to --

11 THE WITNESS: I have a written statement.

12 JUDGE HILLSON: A written statement. Okay.
13 I'll mark this up front as Exhibit 27. And I'll
14 swear you in.

15 TOM THOMPSON, JR.,

16 the witness herein, being first duly sworn on oath, was
17 questioned and testified as follows:

18 JUDGE HILLSON: Okay. Could you state your
19 name and spell it for the court reporter.

20 THE WITNESS: Yes. I'm Tom Thompson, T-o-m,
21 T-h-o-m-p-s-o-n, and that has a junior at the end.

22 JUDGE HILLSON: Okay. Do you want to ask him
23 any preliminary questions?

24 MR. SMITH: Yes.

25 DIRECT EXAMINATION

1 BY MR. SMITH:

2 Q. Mr. Thompson, one question before you get
3 started. Towards the middle of your statement, there
4 is a Table 4.2. It looks --

5 A. I believe you'll find that right behind the
6 references that are the references on the elasticity of
7 supply.

8 Q. If you could explain why it is that you've
9 put in the statement with the smudges, more
10 particularly which part of the statement you intend to
11 refer to.

12 A. Correct. The only -- the only pertinent part
13 of that page is the farm supply response, the
14 elasticity farm supply response. And this follows the
15 references on the preceding page that refer to this
16 page, and it gives you the numbers for the various
17 sources for those elasticities. But that top line is
18 the only one that we need to be concerned about.

19 Q. So the remainder of the table is not relevant
20 to your testimony?

21 A. It is not.

22 JUDGE HILLSON: Okay. You may testify.

23 STATEMENT BY TOM THOMPSON

24 THE WITNESS: Thank you.

25 Thank you for the opportunity to appear

1 before you to discuss a subject vital to all of
2 Georgia's dairy farm families.

3 I am Tom Thompson, president of the Georgia
4 Milk Producers, as well as a dairyman from
5 Eatonton, Georgia.

6 Georgia Milk Producers represents all of
7 Georgia dairymen and speaks on their behalf in
8 matters such as we are here to address today. It
9 is in this role that I also represent all Georgia
10 dairymen on the Southeast Steering Committee,
11 joining other members of this committee speaking
12 at this hearing.

13 We applaud USDA for holding this emergency
14 hearing to address matters of grave concern to
15 those of us trying to produce milk in the
16 Southeast. We support the proposals made by DCMA
17 at this hearing as a first step in addressing the
18 federal order rules and regulations that appear to
19 be at the heart of the economic plight of the
20 Southeast milk producer.

21 The Southeast is a unique region. On one
22 hand, it contains one of the fastest increasing
23 populations in the U.S. On the other hand, its
24 milk production is decreasing at one of the
25 highest rates in the country and is now deficit

1 year-round. Georgia alone imports more than 1,000
2 tanker loads per month. We need to attempt to
3 understand this seeming paradox.

4 The Southeast has the highest cost of
5 production in the United States. Contributing to
6 this cost is high heat and humidity, causing wide
7 swings in cool versus hot weather milk production.
8 Since production cost is high, the Southeast is
9 not able to produce milk intended for
10 manufacturing purposes, instead trying to operate
11 in a niche market supplying milk primarily for the
12 needs of local bottling plants.

13 Another factor contributing to our high
14 production cost is a lack of proximity to abundant
15 grain and forage production. We have neither the
16 vast rich soils of the corn belt nor the federally
17 subsidized irrigation of the west.

18 In the Piedmont region of Georgia where our
19 dairy is located, there is no aquifer to supply
20 water so desperately needed to grow the forage
21 crops that are currently being decimated by the
22 second year of drought.

23 Let's look a little closer at the region's
24 declining milk production. Since federal order
25 boundaries do not exactly follow state lines, we

1 will use USDA's production figures for Georgia,
2 Alabama, Mississippi, and Tennessee for annual
3 milk production trends from 2000 through 2006.

4 These states have experienced a 3.6 percent
5 annual decline in milk production between 2000 and
6 2006, beginning in 2000 with 3,727,000,000 pounds
7 and falling to 2,997,000,000 pounds in 2006.

8 These numbers have been translated into trend
9 lines by the market administrator's office in
10 Atlanta and would indicate that virtually no
11 dairies will exist in the Southeast in ten years.

12 One of the proposals that is part of the DCMA
13 package we support here today addresses the
14 out-of-state differentials that are supposed to
15 reflect the cost of moving milk from areas of
16 plentiful supply to deficit areas.

17 The differentials in place today were done in
18 an era of gas in the dollar-per-gallon range, when
19 stainless, over-the-road tankers and the tractors
20 that pulled them were far cheaper, and a truck
21 driver's pay was less than one and a half of what
22 is paid today. Adjusting differentials to reflect
23 changes in transportation costs is long overdue.
24 We strongly support that much needed change.

25 Can the Southeast dairymen be economically

1 viable in supplying the needs of the Southeast,
2 primarily fluid milk plants, whose outputs are
3 typically 90 percent Class 1? I would suggest
4 that the answer is it all depends.

5 In my economics courses at Emory University's
6 School of Business, we learned that the price of a
7 commodity in a deficit area was the FOB price of
8 this commodity in a plentiful area plus the true
9 cost of freight to the deficit area.

10 There was no concept that the producer in the
11 deficit area should have his reduced by the cost
12 to deliver additional amounts from a distant area,
13 whether this cost occurred through pooling,
14 transportation credits, reblending, or some other
15 means.

16 In order to put this in perspective, let's
17 review a little history. In the late 1960s,
18 Georgia's milk commission was ruled
19 unconstitutional, and Georgia subsequently got its
20 own Georgia federal order. Unlike today, where
21 the co-ops controlling the majority of milk in the
22 Southeast have their majority membership living
23 outside the Southeast, co-ops in Georgia were
24 local, represented Georgia dairymen, and the
25 Georgia federal order served the industry well.

1 Class 1 utilization was normally in the high
2 eighties and low to mid nineties. Subsequent
3 years added a state here and a state there to the
4 order that soon became the Southeast order.

5 Each geographical increase in the order
6 resulted in small declines in Class 1 utilization.
7 However, USDA's 2000 inclusion of southern
8 Missouri and an additional portion of Arkansas
9 resulted in no small -- in no small decline. This
10 time, the Southeast saw a drop of 15 to 20 points
11 in utilization.

12 Instead of utilization that typically ranged
13 from the eighties to nineties, we now saw
14 utilization hovering in the fifties to sixties,
15 with its corresponding transfer of milk revenues
16 from the dairymen serving the needs of bottling
17 plants in their close proximity every day, to
18 those dairymen far distant who were qualified by
19 touchbase and diversion rules.

20 Since January 2000, my partners and I have
21 estimated this change in utilization has cost our
22 800 cow dairy hundreds of thousands of dollars.
23 We cannot continue to operate our dairy under
24 these adverse economic conditions.

25 Therefore, we and other Georgia milk

1 producers applaud and support DCMA's proposal to
2 place a cap on diversions as a first step need to
3 raise utilizations.

4 Since this is an emergency hearing, USDA has
5 not had the time to do a study to determine how
6 much stand-by capacity is required to supply the
7 Southeast's deficit needs. We suggest that USDA
8 should conduct this analysis and initiate
9 subsequent changes that their study might deem
10 warranted in order to more closely approximate the
11 real economics I was taught years ago.

12 It is my belief the purpose of this hearing
13 is an attempt to address the economic issues that
14 are forcing Southeast dairymen out of business.
15 With the Southeast becoming increasingly dependent
16 on milk transported many times more than 1,000
17 miles from where it is produced to where it is
18 needed, this has vast implications of increasing
19 demands on foreign oil, air pollution, congested
20 highways, vulnerability to bioterrorism, in
21 addition to the insidious economic bleeding of the
22 Southeast milk producer.

23 According to DCMA's estimates, the combined
24 impact of additional Class 1 pooled revenue and
25 lower diversion limits would increase federal

1 order minimum blend prices. Based on 2006 annual
2 data, the estimated increase in blend prices at
3 various order base zones are -- and I quote and
4 only use this particular one -- 75 cents per
5 hundredweight in the Atlanta base of Federal order
6 7. And I reference the proposed Federal Orders 5,
7 6, and 7 amendments talking points by DCMA.

8 Other locations and orders vary from these
9 numbers.

10 Now, I would like to reference projected
11 increases in the milk production resulting from
12 the proposed price changes compiled by Dr. Tommie
13 Shepherd, University of Georgia, and Dr. Geoff
14 Benson, North Carolina State University.

15 And now if you will flip to the next sheet, I
16 will read from the title of this, The projected
17 increases --

18 JUDGE HILLSON: Wait, Doctor.

19 THE WITNESS: Yes.

20 MR. BESHORE: Your Honor, if I might, I would
21 object to Mr. Thompson proposing to read the
22 publication of Dr. Shepherd and Dr. Benson. It's
23 not his testimony. It's not his work product, and
24 I don't think it's appropriate for him to read it
25 as his testimony. Dr. Benson and Dr. Shepherd are

1 not here to answer any questions concerning it,
2 and that's beyond the type of testimony should be
3 accepted.

4 JUDGE HILLSON: Okay. It's not unusual to
5 attach articles to be relied on by the testimony.

6 MR. BESHORE: Well, yes and no. I would say
7 that in testimony of the economist in these
8 proceedings typically reference works in their
9 field with which they may be familiar and may have
10 used. Experts rely on other expert testimony.

11 It's not typical for dairy farmers or persons
12 who are not in the field of expertise to attach or
13 present as their statement the publication of
14 experts in other fields. And I don't -- I don't
15 feel it's appropriate. I object to it.

16 JUDGE HILLSON: Mr. Stevens, does the AMS
17 have any position in this?

18 MR. STEVENS: Well, we've had this issue come
19 up before. And I think many times the documents
20 accompany the record, are admitted or accompany
21 the record, and the Department -- the secretary
22 gives it the weight to which it's entitled, you
23 know. It is something that, you know, can
24 accompany the record, and the people in
25 Washington, when they look at the record, they'll

1 decide what weight they give the testimony and the
2 exhibit.

3 JUDGE HILLSON: Mr. Smith, do you want to --

4 MR. SMITH: Dan Smith.

5 Thank you, Your Honor. I think Mr. Stevens'
6 point is well taken. The Department can provide
7 whatever weight to the statement as necessary. I
8 don't think it's relevant whether it's attached to
9 a farmer's statement or not. If the witness
10 wishes to submit a scholarly article, which is
11 certainty sourced as an attachment to his
12 testimony, then that ought to be within the
13 purview of the testimony.

14 JUDGE HILLSON: Well, Mr. Beshore's objection
15 is based on the fact that there is no
16 cross-examination in terms of the contents of the
17 article. I mean, if this was an adversarial
18 hearing, I guess I would just -- I would sustain
19 the objection. But at this point, I will allow
20 him to introduce it with the understanding that
21 the government is going to give it the weight that
22 it thinks it deserves, which if there is any
23 questions on it, with nobody to ask about it, then
24 it's -- it should not be entitled to much weight.

25 MR. SMITH: Mr. Beshore, obviously, has the

1 opportunity to brief whatever concerns he has.

2 JUDGE HILLSON: Right. But he's still -- in
3 terms of whatever facts come out of here --
4 obviously, I'm seeing it for the first time --
5 he's at a disadvantage, because he's -- he has
6 Mr. Thompson here, but Mr. Thompson is not the one
7 to cross examine on what is in this -- in this
8 article, which is pretty pertinent, I guess, to
9 some of -- which may be pertinent to some of the
10 issues in this case.

11 I'm going to allow it in, but I just don't
12 think it's entitled to that much weight. I can't
13 tell AMS, because I'm not the deciding official in
14 this case, how much weight to give it. But I
15 would think that they wouldn't give it that much
16 weight because there is no -- they don't have
17 anybody to cross examine. So I'm going to let it
18 in, but with the understanding that I don't think
19 it should be given much weight.

20 So you can proceed.

21 THE WITNESS: The title of the compilation of
22 the research data that is presented here in this
23 summary by Dr. Tommie Shepherd and Dr. Geoff
24 Benson entitled, Projected Increase in Milk
25 Production Resulting from Proposed Price Changes.

1 And the first portion of this is, Farm Milk
2 Supply Elasticities.

3 The primary reason cited for the proposed
4 changes to the Southeast, Appalachian, Florida
5 federal milk marketing orders is concern over the
6 declining milk production levels in these areas.

7 To assess the impact on DCMA's proposed Class
8 1 differential increases and diversion limit
9 decreases on milk production in the Southeast and
10 Appalachian, it is beneficial to understand how
11 changes in farm level milk prices impact
12 production.

13 In addition to the price of milk, numerous
14 other factors may influence production, including
15 feed prices, land values, replacement heifer
16 prices, and government programs, to name a few.

17 Extensive research has been conducted in the
18 area of farm level milk production responses to
19 changes in milk prices at a national level,
20 yielding a wide range of estimated price
21 elasticities.

22 Price elasticity is a measure of the expected
23 percentage change in the quantity of a commodity
24 produced given a one percent change in its price.
25 A review of current peer-reviewed academic

1 research reveals estimates ranging from .07 to
2 .59.

3 This includes estimates from sources
4 including the United States Office of Management
5 and Budget, OMB, the Food and Agriculture Policy
6 Research Institute, FAPRI, as well as other
7 authors listed in references at the end of this
8 paper.

9 Little, if any, work has been published in
10 the area of estimating supply response functions
11 for the Southeast and even less specifically
12 related to individual states.

13 The next area is milk production trends in
14 the Southeast and Appalachia.

15 Figure 1 shows annual milk production for
16 selected states for 2000 through 2006. Since
17 federal order boundaries do not exactly follow
18 state lines, the states of Georgia, Alabama,
19 Mississippi, and Tennessee are referred to as the
20 Southeast. And North Carolina, South Carolina,
21 Virginia, and Kentucky are referred to as the
22 Appalachia.

23 Based on data from the National Agriculture
24 Statistics Service, NASS, milk production in the
25 Southeast states has declined by an average of 122

1 million pounds or 3.6 percent annually since 2000.
2 Similarly, milk production in the Appalachian
3 states has declined by an average of 143 million
4 pounds or 3.0 percent annually since 2000.

5 And at the top of the next page, you will see
6 a graph indicating those production trend lines.

7 Estimated supply -- milk supply response.

8 A widely circulated set of talking points
9 compiled by proponents of the proposed states that
10 the combined impact of additional Class 1 pool
11 revenue and lowered diversion limits would
12 increase federal order minimum blend prices.

13 Based on 2000 annual data, the estimated
14 increase in blend prices at the various order base
15 zones are approximately 28 cents per hundred
16 weight in Federal Order 5, parentheses,
17 Charleston, Winston-Salem, and approximately 75
18 cents per hundredweight in Federal Order 7,
19 Atlanta, Dacula.

20 Blend price increases in other cities would
21 vary up and down from the above values based on
22 each city's proposed increase in Class 1 prices,
23 end quote.

24 Combining these estimated price increases
25 with the aforementioned estimated milk price

1 supply elasticities offers a projection of how
2 much milk production in the Southeast and
3 Appalachia may be expected to increase as a result
4 of the proposed federal order changes.

5 A range of milk supply increases is derived
6 based on the low and high elasticity estimates
7 cited above. The low estimate, .07, is attributed
8 to the FAPRI, and we consider it a short-term or
9 partial response. The high estimate, .59, is
10 attributed to Suzuki and Kaiser, and we consider
11 it a long-term or full effect.

12 Dairy farmers have limited options to respond
13 to price increases in the short-term run. Milking
14 cow numbers cannot be adjusted easily except by
15 less rigorous culling. Options to boost milk
16 production per cow are similarly limited in a
17 well-managed herd.

18 In the longer term, some additional heifers
19 can be raised and the rate of dairy farm exits may
20 slow, slowing or reversing the long-term trend in
21 cow numbers.

22 Between 2000 and 2006, the average mailbox
23 milk price, which is the price actually received
24 by farmers for their milk, as published by USDA,
25 was \$14.72 per hundredweight for the Southeast

1 federal milk marketing order and \$14.27 for the
2 Appalachian order.

3 The proponents estimate of a 75 cent per
4 hundredweight increase represents a five percent
5 increase in the average Southeast federal order
6 uniform price.

7 The estimated 28 cents per hundredweight
8 increase represents a two percent increase in the
9 Appalachian federal order uniform price. The
10 results of applying these estimated price
11 increases to the indicated supply elasticities are
12 shown in Figure 2.

13 Figure 2 is a table showing that at the short
14 term in the Southeast, a 75 cent change in milk
15 price would be expected to have a .35 percent
16 increase in production. And that's the short
17 term.

18 The long-term would be 2.95 percent. And in
19 the Appalachia, an increase of 28 cents would be
20 expected in the short run to give .14 percent and
21 in the long run 1.18 percent.

22 Table 2 demonstrates that given the estimated
23 price increases and supply response elasticities,
24 production in the Southeast can generally be
25 expected to increase by less than three percent

1 and production in Appalachia can generally be
2 expected to increase by less than 1.2 percent.

3 These are lower than the average annual rates
4 of decline of 3.6 percent and 3.0 percent
5 experienced since 2000 by the Southeast and the
6 Appalachian states respectively.

7 Applying these estimated percentage increases
8 to 2006 production levels in the two regions
9 yields the expected milk production increases
10 shown in Figure 3.

11 And that table shows that for the Southeast,
12 based upon the 75 cents, the short-term or partial
13 effect would be 10,489,000 pounds. The long-term
14 would be 88,411,500 pounds. And the Appalachian,
15 the increase of 28 cents would yield a short-term
16 effect of 6,011,600 pounds and a long-term effect
17 of 50,669,200.

18 Based on these estimates, the expected
19 increase in milk production in the two areas as a
20 result of the anticipated price increase is less
21 than the current average annual rate of decline,
22 suggesting that these modest price increases will
23 have a very limited impact on the current milk
24 production trends.

25 The next page are the references that these

1 numbers were based upon. And then the previously
2 mentioned smudge sheet that Mr. Smith asked me
3 about is the things that would clarify and follow.
4 And it gives you an Excel spreadsheet showing
5 those various ranges and the sources from where
6 they came from.

7 Given the limited impact on current milk
8 production trends that this analysis indicates
9 would be expected from DCMA's proposal, this
10 underscores our position that, although we fully
11 support DCMA's proposal to address the Southeast's
12 economic plight, it is but a first step to correct
13 the economic inequities that have plagued the
14 Southeast's ability to continue local milk
15 production.

16 It is my belief that USDA first needs to
17 implement DCMA's proposal and then use the data
18 and qualified economists at its disposal, becoming
19 proactive similar to the federal reserve board as
20 opposed to reactive.

21 After implementation of the DCMA proposal,
22 USDA should also monitor the results.

23 If the goal is to achieve a reversal of the
24 present trends in the Southeast, USDA needs to
25 give serious thought to a partial decoupling of

1 Class 1 pricing from manufacturing milk prices set
2 primarily by western overproduction, production
3 that controls our fluid milk price but which is
4 physically unrelated to our market.

5 The need for this review is underscored by
6 the current lack of confidence in the veracity of
7 the pricing data provided. Price volatility may
8 be acceptable and understandable in manufacturing
9 prices. Volatility and fluid pricing typically
10 robs both the consumer and the dairyman. Georgia
11 and other Southeast dairymen are tired of being
12 robbed.

13 Given the dismal track history of reform
14 inflicted on the Southeast since 2000, nothing
15 less than a review and readdress by USDA is needed
16 to achieve true economics. Only then will there
17 be a chance to stop the cannibalization of the
18 Southeast.

19 Thank you, and I appreciate the opportunity.

20 JUDGE HILLSON: Any further questions of this
21 witness, Mr. Smith?

22 CONTINUED DIRECT EXAMINATION

23 BY MR. SMITH:

24 Q. Dan Smith.

25 Tom, if we could just go back to the smudge

1 chart for a minute. Just to clarify the footnotes, if
2 you can. Do you have a clear copy to read what the
3 footnotes identify?

4 A. I do not.

5 Q. And if you could clarify the two spreadsheets
6 you referenced following that -- the numbers that --
7 did you -- did you prepare these spreadsheets or --

8 A. No, I did not. That was a part of the data
9 that Dr. Shepherd and Dr. Benson used in preparing this
10 analysis.

11 Q. Are the circles made by you or by him?

12 A. They were made by Dr. Benson and
13 Dr. Shepherd.

14 Q. And can you explain the relevance of these
15 numbers as it relates -- does it relate to the table?

16 A. It relates to the table that they calculated
17 their numbers from, the response. If you remember,
18 they referenced both FAPRI as well as Suzuki and
19 Kaiser. They used FAPRI as the initial response on the
20 low end. That was what they considered to be an
21 initial response. They used Suzuki and Kaiser at the
22 high end at .59, as .59 of one percent response in
23 supply expected with a one percent change in the milk
24 price.

25 Q. And can you point to where the two tables,

1 the two spreadsheet tables, fit into that?

2 A. If you look at -- if you look at the Figure
3 3, you will notice there they used a .07. They took
4 the low end of FAPRI as their short term or partial
5 effect, and then they took Suzuki and Kaiser at .59 for
6 the long-term or full effect.

7 MR. SMITH: Okay. I don't have any other
8 questions, Judge. Thank you.

9 JUDGE HILLSON: Anyone else have questions of
10 this witness, Mr. Thompson? Mr. English, go
11 ahead.

12 CROSS-EXAMINATION

13 BY MR. ENGLISH:

14 Q. Good afternoon, Mr. Thompson. My name is
15 Charles English. I'm here for Dean Foods Company and
16 National Dairy Holdings. And I guess this is déjà vu
17 all over again. I remember talking with you back in
18 2004.

19 A. You and I have both been around a while.

20 Q. And at that time, there was a proposal being
21 submitted that would merge the Southeast and the
22 Appalachian orders.

23 A. That's correct.

24 Q. And your organization opposed that?

25 A. That's correct.

1 Q. And in addition, there was a proposal that
2 had been submitted -- but the secretary decided not to
3 hear it -- that would break up the orders.

4 A. That's correct.

5 Q. And your organization supported what wasn't
6 on the table, but you nonetheless supported that
7 concept, correct?

8 A. That's correct.

9 Q. And the positions you took at that hearing
10 were very much consistent with -- and looking at your
11 testimony on page 2 today, a very long paragraph in the
12 discussion of what happened every time you added more
13 territory. Your position then was consistent with that
14 as well?

15 A. Yes, sir.

16 Q. So when you asked the secretary to conduct a
17 study and analysis of what might be the proper standby
18 capacity, should the secretary also look at what size
19 these orders should be?

20 A. We certainly think so, yes, sir.

21 MR. ENGLISH: Thank you.

22 JUDGE HILLSON: Mr. Beshore, do you have any
23 questions?

24 MR. BESHORE: I do have one question.

25 CROSS-EXAMINATION

1 BY MR. BESHORE:

2 Q. Mr. Thompson, with respect to the Shepherd
3 and Benson paper, do you know -- do you know what the
4 test of the mailbox prices was, what the butter fat
5 test was?

6 A. No, I do not.

7 Q. Would you agree or disagree that if your
8 calculating percentage changes in price, you ought to
9 be using the same butter fat test for that?

10 A. I would agree. And I suspect that they did,
11 but I cannot say that for sure.

12 Q. Okay. Just one other question. You used
13 pretty strong language here, Georgia dairymen being
14 robbed.

15 A. I thought you might ask that.

16 Q. I mean, we appreciate your support for the
17 proposal. If the proposals are adopted, are you still
18 being robbed?

19 A. Well, part of the money that we feel that has
20 been removed from the market will be -- will be
21 replaced. We do not think that all of it will be with
22 the proposals. And that's the reason we urge that a
23 study be conducted to properly put in perspective the
24 role of the Southeast dairymen in this market.

25 MR. BESHORE: Okay. Thank you.

1 THE WITNESS: Thank you.

2 JUDGE HILLSON: Anything from the government
3 table?

4 MR. ROWER: No.

5 JUDGE HILLSON: Okay. I'm going to admit
6 Exhibit 27 into evidence.

7 (Exhibit No. 27 received.)

8 JUDGE HILLSON: And, Mr. Thompson, you may
9 step down. Thank you for testifying.

10 THE WITNESS: Thank you, sir.

11 JUDGE HILLSON: I guess the next step is to
12 have Mr. Sims come on back up.

13 Before I turn over to Mr. Beshore for
14 redirect, I just want to make sure that everyone
15 in -- see if there is any other cross-examination,
16 any other questions the other parties want to ask
17 before I turn it over to Mr. Beshore?

18 Mr. Rower, do you have a question? Let's
19 wait until he gets up there.

20 MR. ROWER: Sure, just one question.

21 JUDGE HILLSON: You can ask more than one.
22 It's okay by me.

23 MR. ROWER: Thanks.

24 JUDGE HILLSON: You can go ahead, Mr. Rower.

25 CROSS-EXAMINATION

1 BY MR. ROWER:

2 Q. Welcome back, Jeff.

3 A. Thank you.

4 Q. Jeff, my question is could you please expand
5 on the discussion in your testimony -- and it was also
6 raised by Dr. Shelton in his testimony earlier --
7 concerning the impact of increased Class 1 prices on
8 the existing premium structure, as what Dr. Shepherd
9 was saying, as Class 1 prices increase, it seems that
10 premiums will decrease.

11 A. In the past in the Southeast, there was a --
12 I guess a formula based process by which over-order
13 prices did decline when the -- what we typically refer
14 to as the mover -- if Class 1 price mover exceeded to
15 certain benchmark prices, and the over-order prices
16 would come down. Conversely, when the Class 1 price
17 mover moved below certain benchmark prices, the
18 over-order prices would increase.

19 That system has not been in place in at least
20 a year and a half, perhaps longer.

21 Q. So that's no longer the practice?

22 A. That has not been the practice for some
23 significant number of months. We've had a -- we have
24 had, roughly, the same over-order price, except for
25 adjustments in fuel, surcharges, for quite some time

1 now --

2 Q. Okay. Thank you.

3 A. -- even with the increases in price that
4 occurred recently.

5 MR. ROWER: Okay. Thank you.

6 JUDGE HILLSON: Mr. English, do you have
7 anything else?

8 MR. ENGLISH: Sure.

9 Charles English for Dean Foods Company and
10 National Dairy Holdings.

11 RECROSS-EXAMINATION

12 BY MR. ENGLISH:

13 Q. Mr. Smith, with respect to your
14 organization's proposal to alter the touchbase
15 requirements from their current levels to one day a
16 month, how is it that lowering the touchbase
17 requirements will make the market more efficient?

18 A. It provides greater flexibility in providing
19 supplies.

20 Q. What about the current touchbase requirements
21 is reducing flexibility or reducing the ability to
22 supply the market?

23 A. Just requires on those very odd occasions
24 where a producer might have to come more often than the
25 one day, producers of that necessity.

1 Q. You say it's a very rare occasion?

2 A. Somewhat rare, yes.

3 Q. But you're reducing it from as many as six
4 days down to one, correct, depending on the month?

5 A. Depending on the order --

6 Q. Depending on the order and the month.

7 A. -- it would be as many as ten days in the
8 Order 7. I believe the current provision is ten days
9 in the tight supply months.

10 Q. If it's rare, why do you need to go down all
11 the way to one rather than going to 6 or 5? What is it
12 that got you to go to 1?

13 A. Well, that provides the -- every month, it
14 provides the certainty those dairy farmers can supply
15 the market when required. That makes them remain
16 associated every month and provides sufficient evidence
17 that those producers can supply when needing more.

18 Q. To the extent a month is a month in which
19 transportation credits are available, if the milk is
20 coming when it's not needed and it is nonetheless
21 drawing -- not needed in the sense that it's -- you
22 said the rare instance when you don't really have to
23 have it, correct?

24 A. Yes.

25 Q. Okay. If it's coming, it's going to draw

1 money from the transportation credit for the purpose of
2 touching base; is that correct?

3 A. If a transportation credit is requested. And
4 if it is delivered to a pool distributing plant, it
5 then would be eligible for a transportation credit.

6 Q. And so if you reduce the touchbase
7 requirement for those rare instances in which a
8 producer is merely shipping in order to stay pooled and
9 if a transportation credit is requested and provided,
10 we're not only having inefficient movement of milk into
11 the market, we're paying for it extra with the
12 transportation credit?

13 A. Would you say that again?

14 Q. Okay. As I understand it, your concern is
15 that there are times in which milk is being delivered
16 merely for the purpose of meeting the touchbase
17 requirement and is not necessarily needed; is that
18 correct?

19 A. That could happen on a rare occasion, yes,
20 sir.

21 Q. Okay. Are there other circumstances you're
22 concerned about?

23 A. I think that's the primary one.

24 Q. Okay. So on those rare occasions when that
25 is occurring, if that milk is coming from outside -- I

1 assume that's milk that's coming from outside the
2 market primarily, correct?

3 A. Not necessarily. The touchbase days and
4 diversion limits apply equally to producers inside the
5 marketing area as outside.

6 Q. Is it difficult to find a home at a pool
7 distributing plant for farms located in the marketing
8 area for ten days out of the month?

9 A. It depends on where the plant is and where
10 the producers are. I wouldn't think difficult would be
11 the right word, but they generally can be touched some
12 number of days.

13 Q. Would it be more rare for a dairy farmer
14 within the marketing area to need, quote, unquote,
15 need, the day to touchbase than for a producer outside
16 the marketing area?

17 A. I beg your pardon?

18 Q. We've been talking about the rare
19 circumstance in which it is necessary in order to
20 maintain pooling for a dairy farmer to touchbase merely
21 to keep pooling, correct?

22 A. Yes.

23 Q. And you said it's a rare circumstance, but
24 sometimes that's what happens, correct?

25 A. Yes.

1 Q. In terms of relative rareness --

2 A. Medium rare or well done?

3 Q. No. I was referring to, you know, the rare
4 hearings that we have in the Southeast.

5 In terms of how rare it is that that happens
6 with respect to a dairy farmer located inside the
7 marketing area versus a dairy farmer outside the
8 marketing area, would it be logical to conclude that it
9 is more rare for it to happen for a dairy farmer inside
10 the marketing area?

11 A. The efficient use of milk requires that -- or
12 provides or requires, suggests that the local producers
13 are used first; the more distant producers are used
14 last. So based on that -- predicated on that axiom, it
15 would be more rare for producers inside than outside.

16 Q. Okay. So, now, given that if under the rare
17 circumstance the milk is coming from outside and a
18 transportation credit would normally be requested and
19 now your proposal is adopted and, as a result of its
20 adoption, that milk no longer has to come in that
21 inefficient way, have we also saved for the
22 transportation credit pool the transportation credit on
23 that milk that otherwise wouldn't be needed to move?

24 A. If you -- if I understand your question --

25 Q. That's quite a caveat.

1 A. -- if you had moved it six days and now
2 you're moving it one and you're paying a transportation
3 credit on six days versus one, you would save
4 transportation credit costs on those five days that
5 didn't move, if that was the question.

6 Q. Now, if you reduce the touchbase requirement
7 from six to one day, are you increasing the number of
8 dairy farmers outside the marketing area who can be
9 pooled and thus -- let me stop that -- stop there.

10 Are you increasing the number of dairy
11 farmers who can be pooled, because now you only need to
12 touchbase one day a month?

13 A. I don't know that it increases the number.
14 The producers who are economically viable to come to
15 the marketing area, I don't know it would change.

16 Q. Does it increase the volume?

17 A. Does it increase the volume that could be
18 pooled?

19 Q. Yes.

20 A. No, since you can touch every -- all 65,000
21 dairy farmers in the country one day at pool plants.
22 And the limit on diversions is the percentage limit in
23 effect in the order. Those touchbase days do not
24 define how much milk can be pooled. The limiting
25 factor is the percentages.

1 Q. And that's why you've proposed
2 simultaneously, with reducing the touchbase
3 requirements, reducing the diversion limits?

4 A. That is one reason, yes, sir.

5 Q. One. Thank you. One reason.

6 Why is it that supplemental milk not
7 delivered to the marketing area needs -- and I mean in
8 an economic sense -- needs to share the pool?

9 A. I think we have a basic question about what
10 forms a marketwide pool, and we need to maybe explore
11 that a little.

12 If local producers can only supply 60
13 percent, 70 percent, you pick the number of the milk
14 necessary to supply a marketing area. Just because
15 they are local or just because a producer -- let me say
16 this better.

17 Just because a producer is more distant, if
18 you have a need for a certain amount of Class 1 milk,
19 the fact that a producer is more distant does not make
20 their milk less valuable, nor does it make it less
21 needed. It just has to go farther.

22 So if you're going to have a market wide pool
23 then the people who are providing the milk necessary to
24 supply the marketing area should share in that blend
25 price and truly provide the amount necessary.

1 Q. Can you get supplemental milk without pooling
2 it if it stays home in a distant market?

3 A. Can you get it without pooling it?

4 Q. Yes.

5 A. Absolutely. Yes, you can. How is that? It
6 can be -- it can happen.

7 Q. And, in fact, Florida does that to a
8 significant extent, correct? It gets supplemental
9 supplies that are not pooled?

10 A. Not pooled?

11 Q. Not pooled.

12 A. Well, I think it's pooled.

13 Q. To the extent that -- well, it's pooled, but
14 it's not pooled on the Florida order?

15 A. I believe that is true, that they might get
16 some supplies sometimes here that are not necessarily
17 pooled on Order 6.

18 Q. And they do that more than, the percentage
19 matter, than Order 5 or 7 do?

20 A. Probably.

21 Q. And they don't have transportation credits,
22 correct?

23 A. Correct.

24 Q. But they have lower diversion limits,
25 correct?

1 A. Correct.

2 Q. Turning to over-order premiums, do you know
3 what the over-order premiums are today in the Markets
4 5, 6, and 7?

5 A. I can get real close.

6 Q. Well, why don't you tell me how close you can
7 get for Order 5. This is Class 1. Start -- let me
8 backtrack.

9 Are the premiums different for different
10 classes?

11 A. Yes.

12 Q. For instance, are they different for Class 1
13 than Class 2?

14 A. Yes.

15 Q. Okay. Is Class 1 the highest?

16 A. Yes.

17 Q. Okay. So what is the Class 1 premium for
18 Order 5?

19 A. For the base city of Charlotte, I believe for
20 the month of June, it's \$2.64 a hundredweight net after
21 receiving credits.

22 Q. Okay. And for Order 6?

23 A. I'm calculating in my head.

24 Q. Okay.

25 A. \$3.81, I believe, for Central Florida.

1 JUDGE HILLSON: Did you just imagine that
2 number out of the air or what?

3 THE WITNESS: Sometimes things just come to
4 me.

5 MR. ENGLISH: I think it came over my right
6 shoulder.

7 JUDGE HILLSON: Just a vantage point for the
8 record, you were lip reading from one of your
9 colleagues.

10 THE WITNESS: But -- yes. I concurred with
11 that statement.

12 BY MR. ENGLISH:

13 Q. All right. And Order 7?

14 A. Atlanta is the same as Charlotte, and then
15 Birmingham is five cents less than Atlanta, and New
16 Orleans, Little Rock, Memphis is 20 cents less than
17 Atlanta.

18 Q. So \$2.44?

19 A. Yes. \$2.64 minus 20 is, I believe, \$2.44.
20 That sounds about right.

21 Q. Do you know what Class 2 premiums are in
22 these markets?

23 A. I can speak for Orders 5 and 7.

24 Q. Okay.

25 A. I believe it's \$1.75 net.

1 Q. And does your organization have any plans
2 regarding the level of the premium should your
3 proposals be adopted?

4 A. Plans?

5 Q. Yes. Like changing of levels.

6 A. At this point, since we have no decision, it
7 would be presumptuous to make any assumption on that.
8 So the answer on plans is no.

9 Q. Turning for one moment to the question of
10 emergency.

11 We have at the moment an open proceeding
12 regarding how the Class 1 or 2 price formulas will be
13 calculated based upon a hearing that was held in
14 Pittsburgh in December of 2006; is that correct?

15 A. That sounds right.

16 Q. And your calculations and your analysis have
17 not taken any consideration of the results of that
18 hearing, correct?

19 A. The calculations by the market administrator
20 used the Class 1, 2, 3, 4 prices in effect in 2004,
21 2005, 2006. And I am confident that they did not
22 insert any assumption regarding any changes resulting
23 from some other proceedings.

24 Q. And you've done no assumptions about that or
25 any other proceeding --

1 A. Correct.

2 Q. -- correct?

3 A. I have done no other calculations.

4 Q. And we've heard a little bit of testimony,
5 but so far not a whole lot, about current marketing
6 conditions.

7 It's true we are in a period of relatively
8 high and rising milk prices, correct?

9 A. Yes.

10 Q. Does your organization -- does your
11 organization have a projection -- well, first of all,
12 what will be the Class 1 price mover for June? It was
13 announced last Friday, wasn't it?

14 A. \$17.82? I believe it was \$17.84, or
15 thereabouts.

16 Q. Have you done any projections as to what the
17 blend price might be for June?

18 A. No, I have not, other than my usual little
19 back of the envelope. But, no, I don't have those with
20 me.

21 Q. Little back of the envelope, what was your
22 little back of the envelope?

23 A. It will increase from May to June, depending
24 on the order.

25 Q. And does your organization have any view on

1 the likely price mover in July relative to June for
2 Class 1?

3 A. I don't know about my organization, but I
4 personally expect that the mover for July may very well
5 be higher than June.

6 Q. And at the moment, the industry expects those
7 numbers to continue to go up or at least stay where
8 they are for the month of June, correct, for some
9 period of time?

10 A. They will either go up, go down, or stay the
11 same.

12 Q. And is it not the case that most industry
13 observers believe these prices will remain high at
14 least to the fall of 2007?

15 A. That is correct. I was facetious before.
16 But, yes, we are in a condition where generally people
17 believe prices are rising and continue to rise for some
18 period of time.

19 Q. And unlike previous periods, part of that is
20 there is a shortage internationally for milk solids?

21 A. That's my understanding, yes, sir.

22 Q. And no immediate prospects for alleviating
23 the supply as opposed to the demand?

24 A. I'm unaware of any of those prospects.

25 MR. ENGLISH: Just one second.

1 (A pause was had in the proceedings.)

2 MR. ENGLISH: I have no further questions.

3 Thank you very much.

4 JUDGE HILLSON: Mr. Smith, do you have
5 cross-examination? Come on up.

6 CROSS-EXAMINATION

7 BY MR. SMITH:

8 Q. Dan Smith. I just have a couple of questions
9 about your Exhibit 21, page B3 --

10 A. Yes.

11 Q. -- and B4.

12 A. Yes.

13 Q. You used this to calculate out the volume --
14 the deficit production for the combined two orders; is
15 that correct?

16 A. Yeah. A presumed deficit. It's -- I don't
17 hold this out to be the actual deficit. And it is --
18 in fact, since you've broached the question, these data
19 on B3 and B4 probably do not recognize the full
20 enormity of the deficit in that these are monthly data.
21 And we all know that milk produced on the first day of
22 the month, if it's not needed for Class 1, is not
23 available on the -- for using Class 1 on the 8th, 9th,
24 10th, etc.

25 So when you look at months as a snapshot,

1 they kind of tend to wash out those daily effects, and
2 you tend to -- when you look at a month, it looks like
3 milk produced on the first day of the month is
4 available on the 8th or 9th. So these numbers
5 represent, in essence, from a practical standpoint, a
6 conservative estimate of the deficit.

7 Q. I guess I'm happy to ask a question for
8 Mr. Beshore.

9 MR. BESHORE: Thank you.

10 BY MR. SMITH:

11 Q. My question relates to the factor that you
12 used between the two pages on the fourth column at the
13 top on B3 for orders for the Appalachian and Southeast
14 orders. You factored 125 percent, as you explained
15 yesterday, to reflect the additional volume necessary
16 to supply the basic supply. And on page B4, you used
17 115 percent.

18 Could you explain the difference between the
19 two?

20 A. Yeah. The primary difference is the use of
21 Class 2 milk in the Florida order, which is somewhat
22 less than the milk used to produce Class 2 products in
23 Orders 5 and 7. That represents the basic difference
24 between those factors.

25 MR. SMITH: Okay. Thanks.

1 JUDGE HILLSON: Cross?

2 Okay. Time for redirect, Mr. Beshore.

3 REDIRECT EXAMINATION

4 BY MR. BESHORE:

5 Q. Mr. Sims, I would first like to address a
6 question related to Mr. English's most recent questions
7 concerning the quest for expedited consideration of
8 this hearing, or so-called emergency consideration.

9 The fact that we're for the time being in a
10 period of rising prices, as described in response to
11 Mr. English's questions, does that alter in any way
12 DCMA's view and your view of the need for emergency or
13 expedited actions on this hearing record?

14 A. Absolutely not.

15 Q. Why not?

16 A. Several reasons.

17 No. 1, prices, even if they are going to
18 increase at least in the short term, will not remain
19 above long-term averages forever. So these proposals
20 would provide those economic incentives beyond,
21 hopefully, this current price environment.

22 Secondly -- and I guess this is in respect to
23 the emergency issue -- one of the cruel ironies for the
24 Southeast is that rising prices make attracting milk to
25 the Southeast more difficult, in that the prices in the

1 reserve supply orders whose prices are -- whose blend
2 prices are generated more in response to changes in the
3 Class 3 and Class 4 prices tend to move up faster than
4 the blend prices in Orders 5, 6, and 7, whose prices
5 are driven by the Class 1 price.

6 And since we have a lag in the classing --
7 or, excuse me, we have an advanced Class 1 pricing
8 system, those blend prices escalate in the reserve
9 areas faster than the blend prices escalate in the --
10 in the Southeast.

11 Milk moves on differences in price, not total
12 price level. So as we move through these price
13 increases, actually, the economic incentive to move
14 milk from the reserve supply areas to the Southeast
15 diminishes in the short term even though we have rising
16 prices.

17 Q. Does the fact that there is an open hearing
18 from last December on the national milk proposal to
19 adjust Class 1, 2 pricing formulas, does that in any
20 way change your request for expedited or emergency
21 consideration of this hearing?

22 A. It does not.

23 Q. Why not?

24 A. Well, these issues are, I believe, separate
25 and address the price relationships within the

1 Southeast and with -- between the Southeast and the
2 reserve supply areas and would not be impacted by, I
3 think, I'm sure -- I think that proceeding.

4 Q. Okay. Let me get to the question of the
5 one-day touchbase and transportation credits, which
6 Mr. English was also just asking a few questions about.

7 Milk that is subject to transportation
8 credits may not be diverted under the present order
9 regulations, correct?

10 A. The actual provision is that when milk which
11 is delivered to a pool plant for which a transportation
12 credit is requested, the actual pounds of allowable
13 diversions are reduced so that, in essence, milk which
14 is requesting a transportation credit, which is by
15 definition milk which is delivered, does not earn an
16 allowable diversion.

17 Q. So that being the case, isn't it, you know, a
18 non sequitur in talking about leveraging touchbase and
19 transportation credits, as I understood it to be, the
20 premises of some of those questions?

21 A. There are many dynamics regarding how
22 diversions are earned and how much, you know -- and
23 those things. But I think the salient point is that
24 when a transportation -- when a load is delivered and a
25 transportation credit is requested on that, that

1 particular delivery to a pool plant does not earn any
2 diversion without any regard to the codified
3 percentages in the order.

4 Q. Okay. I guess theoretically it could -- it
5 could earn a touchbase?

6 A. Not theoretically; that would be a touchbase.

7 Q. That would be a touchbase?

8 A. Yes.

9 Q. But it doesn't earn any diversion credits?

10 A. Correct.

11 Q. Okay. Now, earlier on in your
12 cross-examination -- again, it was probably in response
13 to questions from Mr. English -- you used the colorful
14 terminology of teleporting milk or Star Trek'ing milk,
15 or something to that effect. Okay? And I want you --
16 I want to -- I want to ask you to elaborate a little
17 bit about that, because I think it's an extremely
18 important point to be understood in this record.

19 What were you talking about and why?

20 A. Analogous to the answer I just gave to a
21 question, milk which is -- which is produced and
22 available on the, you know, one day in a month is just
23 basically not available three, four, five days later.

24 The same is true of milk of, you know, a load
25 available in the Shenandoah Valley of Virginia can't be

1 moved instantaneously or free when it's needed in
2 Charleston, South Carolina. You know, there are time,
3 dollars, and miles which create daily variations in
4 need, and you can't use every available load to cover
5 every available need simply because time and space
6 don't allow it.

7 Q. And what does that, you know, factual dynamic
8 of everyday marketing in the order, what does that mean
9 in terms of interpreting statistical data in this
10 hearing record?

11 A. Those data are also masked -- or those
12 realities are also masked in taking a snapshot of a
13 monthly picture. It presumes that every pound that is
14 available at one spot is available for the entire
15 marketing area, which is not true.

16 And, also, certainly it increases the need
17 for a reasonable reserve in terms of how much milk is
18 attached to an order and available -- made available
19 and remains available to service the Class 1 needs.

20 Q. So if monthly data such as in pages B1
21 through B4 of your Exhibit 21, if monthly data of that
22 nature is masked by the spatial and temporal dynamics
23 that you've discussed, what does that tell us about
24 those data? Are they understated or overstated?

25 A. They would understate the real day -- you

1 know, the real deficit, which occurs day to day, would
2 be greater than that calculated for a month in total.

3 Q. Because the spatial and temporal dynamics are
4 masked by the aggravation of numbers?

5 A. Correct.

6 Q. With respect to DCMA's -- your proposal to
7 reduce diversion limits in the orders but not to in
8 Orders 5 and 7, not to the -- to any greater level, to
9 any greater degree, is it your view, in view of the
10 day-to-day realities, the masking of the numbers in
11 terms of needs from aggregate data, is there any way
12 you can serve those markets and reduce those diversion
13 levels lower?

14 A. I believe the data are beyond compelling with
15 regard to the day-to-day needs for balancing and
16 reserve supplies and that the diversion limits proposed
17 by DCMA, particularly as practically impacted by the
18 zero limit on transportation credit delivery of milk,
19 represent the barest minimum diversion limits that
20 would accommodate a market wide pool and a reasonable
21 reserve.

22 Q. And your point with respect to the zero
23 credit for transportation, zero effect on diversion for
24 transportation credit of milk is, as you described
25 earlier, that those percentages in reality must be

1 reduced by, roughly, a third to be real hard
2 percentages?

3 A. In the month when transportation credits are
4 affected, yes.

5 Q. In those months, yes.

6 Okay. Let me ask you a question or two about
7 Class 2 prices, which have come up. That subject has
8 come up a number of times most recently in
9 Mr. English's questions about Class 2 premiums.

10 First of all, do you have any of the market
11 administrator's annual summary? I'm looking at eight,
12 which is Order 5 for 2006.

13 A. Yes, I have that.

14 Q. Okay. Can you just turn to Table 1?

15 A. Yes.

16 Q. Okay. First of all, in terms of the basic
17 economics of Class 2 and pooling, in 2006, in Order 5,
18 the Class 2 price was \$11.76, correct?

19 A. That is the average for the year, yes.

20 Q. Average for the year.

21 Okay. Did the Class 2 volumes in the order
22 add to the overall producer value? Are they higher or
23 lower than the blend price?

24 A. They're lower.

25 Q. Okay. Which means that every hundredweight

1 of Class 2 utilization in the market, the producer's
2 blend price is reduced by some amount?

3 A. Yes.

4 Q. So the Class 2 average value for 2006 was,
5 what, \$3? And do the math. Class 1 minus Class 2.
6 \$3.22 less?

7 A. Yes, that's how I calculated it.

8 Q. So when you're delivering milk to a
9 distributing plant which has both Class 1 and Class 2
10 uses -- which is common, is it not?

11 A. Yes, yes.

12 Q. Okay.

13 -- the producer, the suppliers have no
14 control over how that milk is going to be used,
15 correct?

16 A. Correct.

17 Q. But in Order 5, for instance, there was a
18 \$3.22 per hundredweight average difference in the value
19 of the milk at the plant?

20 A. Yes, between one and two.

21 Q. Between one and two.

22 Okay. And for whatever reasons, whatever
23 market factors are involved, you're unable to -- the
24 DCMA agency is unable to make up that difference in
25 value in over-order pricing, correct?

1 A. Have not up to now.

2 Q. Okay. In fact, your \$1.75 premium on
3 Class 2, setting aside any cost to get any milk there
4 reflected in the, you know, that the premium is needing
5 to defray, it doesn't even make -- it makes a little
6 more than half the gap in value?

7 A. Well -- and since it's less than the Class 1,
8 it even falls further behind, the Class 1 over-order
9 price.

10 Q. Less than a Class 1 over-order price, it even
11 falls behind?

12 A. (Indicates affirmatively).

13 Q. So is it fair to say that the supply in
14 Class 2 milk in these orders is not a like lucrative
15 enterprise for --

16 A. Generally not, yes.

17 Q. In that context, is it appropriate in your
18 view that -- and it's a DCMA proposal, so I assume that
19 it is -- that all of the volume that needs to be
20 brought into the market from great distances subject to
21 transportation credits should receive pay?

22 A. Yes.

23 Q. One final question on diversions.

24 Could Order 5 and 7, in your view, be served
25 if the Florida diversion limit, which have been

1 referenced here, were applied in those orders?

2 A. No.

3 Q. I would like to request, Your Honor -- I have
4 a copy of Mr. Sims' Exhibit 20, which have been
5 annotated with the blanks for exhibit numbers, page
6 numbers that he read into his testimony, being filled
7 in. I would like to ask your permission to have him
8 just look at it and make sure it's correct --

9 JUDGE HILLSON: That's fine.

10 MR. BESHORE: -- the complete version of
11 Exhibit 20, and then substitute this one for the
12 official record, so that when we all look at the
13 exhibit on the Internet copies and everything, we
14 have a document which has all the blanks filled
15 in.

16 JUDGE HILLSON: That's fine. I haven't
17 admitted 20 at this point, anyway. I was going to
18 ask you about that if you wanted him to look at
19 that.

20 MR. BESHORE: Okay.

21 JUDGE HILLSON: You can approach. And why
22 don't you look at it, if you want to look at it.
23 The only difference between that and the copy that
24 we're working with are the blanks were filled in?

25 MR. BESHORE: Correct. I wanted Mr. Sims to

1 confirm that so there is no question about that.

2 JUDGE HILLSON: I'm assuming yesterday's
3 reporter took the exhibits with her.

4 MR. STEVENS: That can be replaced.

5 JUDGE HILLSON: Okay.

6 MR. STEVENS: We can work that out.

7 THE WITNESS: It appears to be correct.

8 MR. BESHORE: So I would request that
9 Exhibits 20 and 21 be received, and I have no
10 further questions.

11 JUDGE HILLSON: I will receive Exhibits 20
12 and 21 into evidence.

13 (Exhibit Nos. 20 and 21 received.)

14 JUDGE HILLSON: And I'll ask you,
15 Mr. Beshore, to put a little tab on it, a yellow
16 sticky or something, that they'll know that that's
17 the official one to replace the one that the
18 reporter took yesterday.

19 Is there anyone who wants to recross?

20 MR. STEVENS: Mr. English, what a surprise.

21 MR. ENGLISH: I promise a true recross.

22 RE-CROSS-EXAMINATION

23 BY MR. ENGLISH:

24 Q. If the Class 2 value is so much less than the
25 Class 1 value and, indeed, less than the blend price,

1 why deliver milk to plants with Class 2 use?

2 A. Because the deliverers can't make that
3 decision. The plant operator determines what the use
4 of that plant is and demands volumes that fill their
5 needs. The deliverer doesn't get to choose which
6 classification they deliver to. In fact, the market
7 administrator provides a proration through a practical
8 sense of that utilization to all suppliers.

9 Q. Doesn't this come back to the problem,
10 though, that was testified about at the last -- at
11 least the last -- not the last two hearings -- and you
12 have knowledge that you haven't changed full supply
13 contracts at any time. The full supply contracts
14 provide for the milk, correct?

15 A. They have not been changed, to the best of my
16 knowledge.

17 Q. Did we hear you correctly? Did you say that
18 if the Florida diversion limits were adopted for
19 Federal Orders 5 and 7, that Orders 5 and 7 would not
20 be supplied?

21 A. I probably answered that a little too
22 quickly.

23 Q. But that's what we heard, right?

24 A. Yes.

25 Q. Okay. Would you like to change that a little

1 bit?

2 A. I can -- I'm not going to -- I'm not going to
3 make a declarative statement that they would not be
4 supplied. I believe they would be supplied
5 inequitably. If they were supplied, there would be an
6 inequitable sharing of the cost and an inequitable
7 sharing of the Class 1 revenue and not a true market
8 wide pool which would supply those. I can't say -- I
9 won't declare that they wouldn't be supplied, but a lot
10 of bad things would happen if they were.

11 Q. You're certainly not saying that in the
12 absence of regulation, milk wouldn't flow to the
13 plants?

14 A. I would not say that, that's correct. I
15 probably spoke a little quickly with that answer.

16 Q. But you've said that you believe you've
17 provided for a reasonable reserve. What is the
18 reasonable reserve for these orders?

19 A. The reasonable reserve I provided -- that is
20 provided based on our testimony is roughly 25
21 percent --

22 Q. Okay.

23 A. -- of pooled plant deliveries in the short
24 season, and then it allows for the additional ten
25 percent in the flush in December.

1 MR. ENGLISH: Thank you.

2 JUDGE HILLSON: Anyone else? Any more
3 redirect?

4 You may step down, Mr. Sims. Since we're
5 going to go until 6:30 tonight, I suggest two
6 ten-minute breaks instead of one 15-minute break.
7 And I suggest we take that break now.

8 (Brief recess was taken.)

9 JUDGE HILLSON: Let's get seated, and we can
10 get started. All right, sir. Let's go back on
11 the record.

12 Mr. Beshore, you may call your next witness,
13 please.

14 MR. BESHORE: Thank you, Your Honor. We call
15 Mr. Dale Lawson.

16 JUDGE HILLSON: Okay. Please raise your
17 right hand.

18 DALE LAWSON,
19 the witness herein, being first duly sworn on oath, was
20 questioned and testified as follows:

21 JUDGE HILLSON: Okay. Can you please state
22 your name and spell it for the record?

23 THE WITNESS: My name is Dale Lawson,
24 D-a-l-e, L-a-w-s-o-n.

25 MR. BESHORE: Your Honor, I would ask that

1 Mr. Lawson's statement be marked for purposes of
2 identification as Exhibit 28.

3 JUDGE HILLSON: Okay. So marked.

4 MR. BESHORE: Okay. And there are marked
5 copies available in the room for -- hopefully
6 enough for everyone that may wish to follow along.

7 JUDGE HILLSON: Okay. Do you have any
8 questions of him or --

9 MR. BESHORE: No, I do not.

10 Mr. Lawson, could you proceed with your
11 statement, and then I may have a question or two
12 after.

13 THE WITNESS: Thank you.

14 First off, I want to say I'm appreciative of
15 being here today.

16 My name is Dale Lawson. I'm from Pauline,
17 South Carolina. My farm consists of 300 cows. We
18 raise 500 acres of crops, corn, hay to support the
19 dairy.

20 I'm a member of Maryland & Virginia Milk
21 Producers Cooperative Association, Inc. I serve
22 as an elected member on the board of directors.
23 And as part of my responsibilities of that board
24 of directors, I serve on executive finance and
25 milk marketings committees.

1 In addition, I serve as an alternate director
2 for the Dairy Cooperative Marketing Association,
3 and the Southern Marketing Association.

4 My milk is generally pooled on the
5 Appalachian order. But like my neighbors, it
6 could be pooled on Southeast or the Florida
7 orders. Generally, my milk goes to the Class 1
8 plant in Spartanburg, but some days it moves many
9 miles, as the market dictates and what needs to be
10 done.

11 It would be a benefit to the producers, to
12 the plant, and the consumers that the federal
13 order price surface reflect more of the real cost
14 for moving milk in the Southeast. For that
15 reason, I'm here to testify in support of
16 Proposals Nos. 1, 2, and 3 as offered by DCMA of
17 which Maryland & Virginia Milk Producers is a
18 member.

19 I testify today on behalf of Maryland &
20 Virginia Milk Producers whose board of directors
21 fully supports the hearing proposals offer by
22 DCMA.

23 In my area, the northwest corner of South
24 Carolina, we have seen the dairy farm rapidly
25 decline. Ten years ago, we were the third largest

1 producing counties in South Carolina. Today,
2 there are five dairies left, and we are on the
3 verge of losing two of those.

4 This same situation is true throughout South
5 Carolina. And according to USDA numbers,
6 productions from '06 to -- from '05 to '06
7 declined 3.45 percent. Milk production in South
8 Carolina peaked in 1985 and today is approximately
9 half that number.

10 Based on the information that I receive
11 regularly from the cooperative, I don't think the
12 whole -- the region as a whole fares any better
13 than this.

14 People are moving into the Southeast. Milk
15 production is declining. It's the cooperatives
16 members, such as myself, that balance these
17 supplies in the Southeastern order marketing
18 areas.

19 The burden of balancing becomes greater for
20 every person we gain and every pound of production
21 we lose. The proposals offered by DCMA at this
22 hearing will hopefully stem the tide of milk
23 production declines in the Southeast and
24 hopefully, possibly encourage new production.

25 Even if they do not, the price signal will be

1 sent by increased producer blend prices through
2 higher Class 1 prices, and reduced pooled
3 diversions will make getting milk from the outside
4 region into the Southeast easier.

5 The change in the transportation credit
6 system will give my milk marketers an improved
7 tool to use in getting supplemental milk to the
8 Southeast.

9 We have seen on our farm what the increase in
10 fuel costs have done to the hauling of milk. And
11 these costs do not just apply to my farm; they
12 apply to the cost of moving milk, whether we're
13 moving them into the Southeast or among or around
14 or in the Southeast.

15 The Class 1 price surface in the Southeastern
16 orders need to be updated to take into account
17 these large costs of moving milk.

18 Other parts of the country continue to see
19 increases in milk production or at least not the
20 decrease we're seeing in the Southeast. The
21 federal order should be updated to keep them
22 current with the cost of getting milk into the
23 Southeast from the reserve supply region, as is
24 the purpose of the order program.

25 We support the level of diversions and

1 touchbase days proposed by DCMA for the
2 Appalachian and Southeastern orders. Milk which
3 makes up the regular reserve supply for the order
4 area deserves to be pooled and shared in the
5 order's blend price, even if it doesn't deliver to
6 a Class 1 plant every day.

7 Since Class 1 plants don't receive the same
8 volume of milk every day, not every producer can
9 deliver it to a plant every day. The reserve
10 supplies are generally the furthest from the
11 marketing area and should be the last ones moved
12 into the marketing area for a Class 1 use.

13 It just makes sense for these reserve
14 supplies to be able to share in the blend price if
15 they truly are standby reserve supplies when the
16 market needs the milk. It only adds to the
17 balancing costs to require these producers to
18 deliver extra days even in the short period when
19 the milk is not needed.

20 Based on data I have seen introduced at this
21 hearing, I can understand why the order needs
22 diversion limits and touchbase days that the DCMA
23 has proposed.

24 I heard another producer say that the
25 diversion limits proposed by the DCMA, even though

1 they are less than the current provisions, remain
2 too loose and would continue to allow too much
3 milk to be pooled on the Appalachian and Southeast
4 orders by diversion, lowering Class 1 utilization
5 on the order.

6 I also would like to participate in the
7 federal order pool with the highest Class 1
8 utilizations possible, but I recognize that the
9 diversion provisions need to be realistic and
10 reflective of the need to balance supplies and
11 Class 1 plants.

12 Since these receipts at the Class 1 plants
13 vary so much day to day and week to week by
14 substantial amounts, which was testified to
15 earlier, I believe the DCMA proposal strikes a
16 reasonable balance between the need to make
17 pooling provisions not too wide yet allowing them
18 pooling for the needs and justifiable reserve
19 supplies.

20 Where I live in South Carolina, it is very
21 costly to get milk to the Class 1 plants because
22 South Carolina is simply not close to any reserve
23 supply. The consumers of my state need and
24 deserve a reliable supply of milk, and the order
25 program should provide the pricing signals and or

1 adjust the diversion limits, and touchbase
2 requirements, and update the transportation credit
3 provisions of Orders 5, 7 but utilizing his
4 authority to take emergency action.

5 This concludes my statement. And, again, I
6 appreciate the opportunity to testify.

7 DIRECT EXAMINATION

8 BY MR. BESHORE:

9 Q. Now, Mr. Lawson, could you just -- you're a
10 dairy farmer by occupation today, correct?

11 A. That's correct.

12 Q. Could you just tell us a little bit about
13 your educational background and what, if anything, you
14 did before you went into dairy.

15 A. I am -- I have a bachelor's degree from the
16 University of South Carolina in business. I have a
17 major in accounting. While at Carolina, I was a member
18 of the honor accounting fraternity. I only worked one
19 tax season with a CPA, and I thought I would get rich
20 milking cows. Some things work, some things don't.

21 Q. Okay. With your accounting background and
22 training and your business degree, could you just look
23 at the exhibit that goes with your testimony, the last
24 page of 28?

25 Now, you talked about this a little bit in

1 your testimony, but can you just, perhaps, go over it a
2 little bit with me.

3 A. Anybody that has a copy of it, if you look at
4 the top portion of this sheet, it takes the current
5 rules of the order system, and it takes the distance
6 from my farm to given markets. It takes the hauling
7 cost, and it takes the 2006 federal order blend price,
8 and it projects what the net return is.

9 Under the top portion of it here, which is
10 the current order, my milk will go to Spartanburg,
11 which is about 15 miles away, which is where it should
12 go. But in order to maximize the net returns from my
13 milk, the next place that it should go is to Asheville,
14 which is direct, Asheville, North Carolina, which I
15 presume would be milk code, which is directly north,
16 moving milk into the absolute opposite direction it
17 needs to go.

18 And then you can see on across here, I
19 believe Charleston is the -- is next to the lowest
20 return. And that's the most deficit area that we have
21 in the state of South Carolina.

22 Q. Okay. If you can hold there just for a
23 minute. The line that is captioned at the left,
24 preference rank, is that what you were just referring
25 to?

1 A. Yes. Preference rank is ranked according to
2 the net dollars received from my milk by the
3 cooperative.

4 Q. Okay. So under the top half of the table,
5 this shows that under the economics of the present
6 location prices in the order, it shows the relative
7 ranking and returns to those various plant locations?

8 A. That is correct. The closest plant ranks No.
9 1, and where my milk should go at the second rank is
10 actually ranked No. 5.

11 Q. Okay. And when you say where your milk
12 should go, you mean where you know that it's needed
13 most?

14 A. That is the next closest, really, deficit
15 market.

16 Q. Okay. Now, what's the bottom half of --

17 A. The bottom half is the same analysis with the
18 proposals overlaid on it, which means my milk still --
19 they still take the same distances, and everything.
20 They take the location adjustments and the net dollars,
21 and then they rank it in highlights down here at the
22 bottom.

23 My milk will still go to Spartanburg as it
24 is -- as the No. 1 choice, but the No. 2 choice will be
25 Charleston, which is where it logically should go if

1 we're going to supply a market in an orderly fashion.

2 Q. So this shows, in essence, for your farm, how
3 the proposals would change and make more logical, as
4 you've described, the incentives to move milk within
5 the Southeast to where it's needed?

6 A. That's correct.

7 Q. Okay. And you're familiar with the --
8 generally with the distances and the numbers and the
9 data reflected in the exhibit?

10 A. That is also correct.

11 MR. BESHORE: Okay. I have no other
12 questions for Mr. Lawson.

13 At this time, Your Honor, I would ask that
14 Exhibit 28 be received.

15 Let me ask you just one final question.

16 BY MR. BESHORE:

17 Q. Mr. Lawson, the document that has been marked
18 Exhibit 28, when you read it, there may have been some
19 places where you -- your statement from the witness
20 stand was not verbatim to what's in the exhibit.

21 A. Yes.

22 Q. Is the exhibit and the statements there,
23 nevertheless, part of your intended statements of
24 testimony?

25 A. They are. This is my first time here. I

1 just had to ad-lib a little bit.

2 MR. BESHORE: Thank you.

3 JUDGE HILLSON: Does anyone else have
4 questions of Mr. Lawson? Mr. English?

5 MR. ENGLISH: Charles English for Dean Foods
6 Company and National Dairy Holdings.

7 THE WITNESS: I'm pleased to make your
8 acquaintance.

9 MR. ENGLISH: I'm sorry?

10 THE WITNESS: I'm pleased to make your
11 acquaintance.

12 CROSS-EXAMINATION

13 BY MR. ENGLISH:

14 Q. Does your farm participate in the
15 hundredweight program?

16 A. Yes, we do.

17 Q. Does Maryland & Virginia participate in the
18 hundredweight program?

19 A. Yes, we do.

20 Q. And the hundredweight program, as a matter of
21 policy, after it collects money from the voluntary
22 participation of dairy farmers, uses that money to buy
23 cows out including within the Southeast region,
24 correct?

25 A. That is correct. I understand there are

1 limits on the Southeast.

2 Q. But, nonetheless, they -- there is a limit,
3 but there is also a lower limit. There is a regional
4 basis to make sure that the cows are being removed
5 nationwide, correct?

6 A. That is my understanding, yes.

7 Q. So how is participation in the hundredweight
8 program consistent with the statement that you made on
9 page 2: The burden of balancing becomes greater for
10 every pound of production lost and every person that
11 moves into the area?

12 Doesn't that just add to the burden?

13 A. It probably adds to the burden, but in
14 reality, we probably would be better off if the
15 hundredweight just drew cows out of the, really,
16 pockets of the milk and did not pull them out of the
17 Southeast.

18 Q. Okay. But, nonetheless, your organization
19 participates even though it pulls out of the Southeast,
20 correct?

21 A. Yes.

22 Q. On page 3 of your testimony in the first
23 paragraph, you say, It just makes sense for these
24 reserve supplies to be able to share in the limit price
25 if they are, indeed, true standby reserve supplies for

1 the market needs of the milk.

2 Are you saying that if such milk is not
3 entitled to the pool benefits, you, your organization,
4 the plants in the Southeast would be unable to attain
5 it?

6 A. Say again?

7 Q. Are you saying in the absence of pooling
8 those reserve supplies, that your organization,
9 Maryland & Virginia and the plants that you supply
10 would be unable to obtain that supplemental milk?

11 A. I don't know that I have the expertise to
12 answer that question.

13 Q. Okay. Thank you.

14 And turning finally to your last page.
15 That's not a separate exhibit number.

16 MR. BESHORE: No.

17 MR. ENGLISH: It's --

18 MR. BESHORE: Part of 28.

19 MR. ENGLISH: -- part of 28. Thank you,
20 Mr. Beshore.

21 BY MR. ENGLISH:

22 Q. One of the significant changes from the
23 present to the proposed, as you see it, is that
24 Charleston moves up from being the first -- the fifth
25 preferenced rank to the second, correct?

1 A. That's correct.

2 Q. Now, presently, the plant -- plants in
3 Charleston have the same price as a plant fairly nearby
4 in Florence, correct?

5 A. I think that would be correct.

6 Q. If a plant in Charleston is competing against
7 a plant in Florence and now has a 30 cent per
8 hundredweight disadvantage and loses sales as a result,
9 what happens to the preference if the Charleston plant
10 no longer needs your milk?

11 A. I'm sorry, say that again. I have to think
12 through what you're asking me.

13 Q. What I'm asking is what happens to the
14 efficiency of the movement if, as a result of changing
15 the relationship between Florence and Charleston,
16 Charleston loses a sale and no longer needs milk from
17 Pauline, South Carolina?

18 A. I think as deficit the Charleston area is,
19 that is not likely to be the scenario.

20 Q. Charleston --

21 A. There is not a dairy farm within 60 miles of
22 Charleston, I don't think there is.

23 Q. There is also not a customer east of
24 Charleston, is there?

25 A. Not that I'm aware of.

1 Q. So if you raise the price and the Charleston
2 plant loses its ability to compete to the north and to
3 the west -- and actually, as I remember, Charleston is
4 sort of on the coast and to the south it's a little
5 hard, too, to sell -- who do you expect Charleston to
6 pick up as customers once you've increased their price?

7 A. I don't know that I'm privy to that
8 information.

9 MR. ENGLISH: Thank you very much, sir.

10 JUDGE HILLSON: Does anyone else have any
11 questions of Mr. Lawson?

12 I will receive Exhibit 28 into evidence.

13 (Exhibit No. 28 received.)

14 JUDGE HILLSON: And thank you for testifying.
15 You may step down.

16 THE WITNESS: Thank you.

17 JUDGE HILLSON: Mr. Beshore, you may call
18 your next witness.

19 MR. BESHORE: I call Mickey Childers.

20 JUDGE HILLSON: Please raise your right hand,
21 sir.

22 MICKEY CHILDERS,
23 the witness herein, being first duly sworn on oath, was
24 questioned and testified as follows:

25 JUDGE HILLSON: Please state your name and

1 spell it for the record.

2 THE WITNESS: Mickey Childers, M-i-c-k-e-y,
3 C-h-i-l-d-e-r-s.

4 JUDGE HILLSON: And, Mr. Beshore, I assume
5 you want me to mark that as Exhibit No. 29?

6 MR. BESHORE: I would, yes.

7 JUDGE HILLSON: Okay.

8 DIRECT EXAMINATION

9 BY MR. BESHORE:

10 Q. Your statement, Mr. Childers, has been marked
11 for identification as Exhibit 29. Would you care to
12 present it?

13 A. Yes, sir.

14 Q. Would you proceed, please?

15 A. Yes, sir.

16 STATEMENT BY MICKEY CHILDERS

17 THE WITNESS: My name is Mickey Childers. My
18 wife and I live at 277 Blue Springs Road,
19 Somerville, Alabama 35670.

20 Judy and I operate Burden-Childers Farms, a
21 700 milking cow dairy in partnership with her
22 father, and my two sons, Jim and John. Our farm
23 spans four generations that began milking cows in
24 1945. It goes without saying that we have
25 witnessed numerous changes in the dairy industry,

1 from the days of milking in the flat barn into
2 pails, pouring the milk into ten-gallon cans,
3 cooling it in the spring water, hauling the
4 ten-gallon cans 20 miles to meet the Carnation
5 truck to be shipped off to be processed.

6 Today we milk 50,000 pounds of milk onto a
7 trailer, and it will be processed tomorrow. Times
8 have changed.

9 I'm a member owner of Dairy Farmers of
10 America, Incorporated, DFA, and market all my milk
11 through that cooperative. I am a director
12 representing local dairy farmers on the DFA
13 Southeast Area Council Board, and also on the
14 corporate board of directors.

15 Our cooperative board actively discusses
16 marketing issues at every board meeting, and my
17 testimony reflects not only my own opinion but
18 also those of the producers I represent. Our
19 board has discussed the proposals being presented
20 here today and endorses the position of DCMA.

21 I have attended and testified at federal
22 order hearings in the past and appreciate the
23 opportunity to be here today to represent the
24 views of more than 2,900 producers in the
25 Southeast, the largest single block of producers

1 in the region.

2 I do not claim to have all of the technical
3 expertise of Mr. Sims and some of the other
4 witnesses, but I do have some understanding of how
5 orders work and how they are supposed to benefit
6 producers, processors, and consumers.

7 I understand that the federal order system
8 does not guarantee my neighbors or me a profit or
9 even a market. But it should determine and
10 enforce the provisions to market milk in the most
11 economical and equitable way.

12 This should mean that the consumers get a
13 good product at the most reasonable price
14 possible, that processors get adequate supplies at
15 prices and terms that are transparent and
16 reflective of the market conditions, so they can
17 focus their businesses on processing and
18 delivering products, and that dairy farmers share
19 in the market returns equally, and that those
20 returns reflect a competitive cost to supply milk
21 to consumers and are shared among all farmers.

22 In the Southeast, production conditions are
23 stressful to cows, making milk production a
24 difficult enterprise. This fact is pretty clear
25 when you consider that there have been few large

1 scale western style dairies planted in the
2 Southeast. There are several in the lake states
3 and many in the western Kansas and New Mexico and
4 west Texas. There, conditions are just more
5 conducive to these types of operations.

6 Because of my interaction with the DFA boards
7 and our attempts through the DCMA to source
8 supplemental milk supplies, I am aware of more
9 than one such operation that has considered a
10 Southeast farm site and simply chosen to locate
11 somewhere else, where the profit margins were more
12 predictable and the dairy conditions better.

13 We have excellent markets, a growing
14 population, and a good product to sell in the
15 Southeast, but a difficult time making margins
16 high enough to maintain production to meet the
17 needs of the area.

18 My farm generates more production per cow
19 than ever before. But the Southeast industry will
20 be hard pressed to achieve the continuous high
21 levels of output per cow that are in other regions
22 of the country simply due to the climatic
23 conditions in the Southeast.

24 Because our local milk production continues
25 to shrink, the Southeast brings milk into the

1 market nearly every day of the year. This is an
2 expensive process. I review and discuss these
3 costs monthly at our board meetings. Because of
4 the difficult production conditions in the
5 Southeast, our seasonality is more severe than
6 many other areas, and this affects our costs to
7 supply the market.

8 Rising fuel costs have a big impact on our
9 balancing costs, because we import milk from long
10 distances every day. Our plant customers, many of
11 them are sitting in the hearing room today, also
12 deal with efficiencies.

13 There are fewer milk plants now than when I
14 started dairying, and most of them are much
15 larger. When they break down or face a holiday or
16 reduce their volume because of a change in school
17 schedule, the pounds of milk they don't need
18 becomes a lot of milk to take care of.

19 My co-op has taken steps to improve our
20 situation. We have made better strides in
21 controlling our marketing costs. We coordinate
22 dispatching activities from New Mexico to Indiana
23 to Miami to Pennsylvania every day. We attempt to
24 bring the most economical supplies first and the
25 most costly last.

1 Where we make commitments for milk volumes,
2 we attempt to balance them in the home market, not
3 here in the Southeast. Bear in mind it is not
4 easy to get commitments for 200 loads for milk in
5 one day. You must be a steady buyer and commit
6 for the whole year to secure that much. There are
7 days when we need the whole 200 loads and days
8 when we need much less.

9 If we get an order, we assume our customer
10 wants the load, and we certainly want to sell it.
11 Also, the members of DCMA work together to move
12 our own local milk supplies as efficiently as
13 possible.

14 My farm produces approximately one load of
15 milk a day. My milk may be sent to Winter Haven,
16 Florida, Dothan, Alabama, or Birmingham, Alabama,
17 on any given day depending on where the milk is
18 needed.

19 We work together to reduce marketing costs,
20 but we are not the whole market. And I know that
21 while everyone gets to share the order benefits
22 equitably, after all the blend price is announced
23 for everyone, not everyone shares in the marketing
24 costs.

25 This is one of the reasons why we are here

1 today, to ask the secretary to look at the
2 Southeast orders and the costs of serving them and
3 determine if the proposals we have made are a fair
4 way to address the costs and serve the market.

5 I'm not an expert in order language, but I do
6 understand the basics of what we're doing. The
7 provisions that deal with touchbase will help us
8 in saving delivery costs. I know it is hard to
9 estimate how much, because in spite of the number
10 of times I've asked Mr. Sims or Ms. Mosley how
11 much, they can't figure it out. They won't give
12 me an answer. I don't think they know.

13 But intuitively, we know there is a benefit.
14 For those that claim it will expose the market to
15 more milk than it needs, we can tell them the
16 diversion limits will help control that.

17 The data from the market administrator shows
18 that less milk can be attached to the pool than
19 before and blend prices will be increased. Also,
20 both of these factors are adjustable by the market
21 administrator, and we have great faith in her
22 ability to keep things under control.

23 The changes in the transportation credits
24 will also help us to offset marketing costs by
25 being better able to recover haul costs. Both the

1 higher rates of assessment and the pay back on
2 full loads will cover more of the costs, but not
3 all. And as a local producer, I don't want it to
4 cover them all.

5 Finally, the changes in the differentials
6 will help put more dollars in dairy farmers'
7 pockets. The look at differentials is long
8 overdue. I realize changes like this are hard to
9 make, but they should have been made sooner.
10 Price changes are never 100 percent accepted. Ask
11 any of the dairy farmers in the room today about
12 costs to feed, and you will quickly get an
13 education.

14 But our marketing and sales personnel have
15 studied them, discussed them with the market
16 administrator personnel, and we are satisfied they
17 are a good package. They are higher the deeper
18 one travels into the Southeast, matching the areas
19 that are more costly to supply.

20 We trust that AMS, Agricultural Marketing
21 Service, personnel listening to the testimony here
22 today can make sure the right price changes take
23 place in the right cities.

24 The combination included in this package do
25 not please everyone, including some who may be

1 speaking here this week. It is not perfect in the
2 eyes of all my dairy farmer neighbors either. It
3 does not address all of our key needs, but it does
4 improve many of the day-to-day marketing
5 situations our organizations face.

6 We have to make compromises to move forward.
7 If every complaint stopped the process, we would
8 never get any changes. I know from my
9 associations in the industry that some dairymen
10 think some of these proposals go too far, while
11 others of them think not far enough. But I have
12 not seen a comprehensive set of proposals offered
13 by anyone else that does not -- that does as much
14 good as these.

15 If those here who are negative have a
16 complete set of proposals to offer, they would
17 have been considered. But I did not see one, and
18 this is the one that we have before us today to
19 deal with.

20 My neighbors and the producers I represent
21 think these proposals are a step in the right
22 direction.

23 Changes in the Southeast have been slow in
24 coming. Most of us would like to see this package
25 of proposals happen as soon as possible, so we

1 support moving the hearing along quickly.

2 Thanks for the chance to give you my views.
3 I'll take any questions you may have and pass the
4 hard ones on to Mr. Sims.

5 MR. BESHORE: Okay. Thank you, Mr. Childers.

6 The witness is available for
7 cross-examination.

8 JUDGE HILLSON: Okay. Anyone have questions
9 of this witness? Mr. English, come up.

10 MR. ENGLISH: Charles English for Dean Foods
11 and National Dairy Holdings.

12 CROSS-EXAMINATION

13 BY MR. ENGLISH:

14 Q. Sir, you stated that you have not seen other
15 proposals. I take it that means you have not seen
16 proposals that Dean Foods submitted at the beginning of
17 this month that the secretary received on or about the
18 same day that this emergency hearing notice was signed.

19 A. No, sir, I have not.

20 Q. Okay. And that the secretary indicated,
21 except for one of those proposals, they could all be
22 considered. So you have not seen that; therefore, your
23 testimony here did not consider that. Correct?

24 A. No, sir.

25 MR. ENGLISH: Thank you, sir.

1 JUDGE HILLSON: Any other questions?

2 Okay. Mr. Childers, thank you very much for
3 testifying. You may step down.

4 And I will receive Exhibit 29 into evidence.

5 MR. BESHORE: Thank you.

6 (Exhibit No. 29 received.)

7 JUDGE HILLSON: That was the last witness you
8 wanted to call?

9 MR. BESHORE: Yes. We have no further
10 questions.

11 JUDGE HILLSON: I guess it's your turn,
12 Mr. English. Do you have a witness?

13 MR. ENGLISH: I have a motion, first. I've
14 got to make a motion.

15 JUDGE HILLSON: Make your motion.

16 MR. ENGLISH: Your Honor, on behalf of Dean
17 Foods Company and National Dairy Holdings and
18 pursuant to 7 CFR 900.7, which is an oral motion
19 before a judge, as long as you haven't certified
20 the transcript yet, we have a motion to terminate
21 this proceeding for lack of evidence consistent
22 with the secretary's policy concerning the
23 adoption of Class 1 differentials.

24 Dating back at least to the decision in the
25 Fifth Circuit -- I'm sorry, the D.C. Circuit in

1 1979, in Schepps Dairy vs. Bergland, with respect
2 to the establishment for a proper mechanism for
3 the establishment of Class 1 differentials, when
4 the secretary argued, and prevailed, some of the
5 mechanisms presented today are not appropriate for
6 setting prices. And that is the mechanism of
7 packaged milk between plants.

8 Moving next to the fact that in April of
9 1985, the secretary issued a decision in order 126
10 in Texas with respect to the establishment of
11 differentials within the then Texas order; that is
12 to say, an increase in the class of differential
13 between Dallas and Houston of 36 cents -- from 36
14 cents to 54 cents.

15 And the handlers in that order in Houston
16 promptly sued. And Mr. Stevens and I were down
17 in -- before Judge Hughes in Houston. And in that
18 proceeding, the secretary took a position that the
19 proper mechanism for determining relative prices
20 was to compare a plant location to -- and other
21 plant locations, to their relative reserve supply
22 areas.

23 From there, the secretary repeatedly, in
24 Indiana, in New Mexico, and in Arkansas, was
25 consistent with that kind of formulation. And

1 that culminated in the spatial model adopted by
2 Cornell and used by the secretary in federal order
3 reform in 1999.

4 The proponents, by their own testimony, have
5 not done an analysis consistent with that to which
6 the secretary has said is the proper mechanism for
7 determining relative Class 1 prices.

8 The proponents have not provided any analysis
9 with respect, for this record, with respect to the
10 treatment of plants outside the order -- orders
11 and plants inside the orders.

12 The proponents have used as a smoothing
13 mechanism, which we may appreciate but it may not
14 be lawful, a mechanism for recognizing
15 plant-to-plant values for packaged milk.

16 And by their own admission, without
17 precedent, the proponents have started at the end,
18 Miami, and worked their way backwards to work out
19 what the prices are, none of which is consistent
20 with the secretary's position in the Schepps vs.
21 Bergland case and in all of the hearings that
22 preceded thereafter, whether they were the 1985
23 Farm Bill, whether they were the 1990 hearing,
24 whether they dealt with Clovis, New Mexico, with
25 Goldstar in Little Rock, with Schepps Dairy in

1 Dallas. None of that is consistent.

2 And, therefore, the Class 1 differential
3 portion, which they say is linked to everything
4 else, must fail and the hearing should be
5 immediately terminated.

6 Thank you very much.

7 JUDGE HILLSON: I'm presuming that some
8 proponents want to speak to that. I'll let you go
9 first, Mr. Beshore.

10 MR. BESHORE: Thank you, Your Honor.

11 Your Honor, the motion made by Dean and NDH
12 has no merit whatsoever.

13 First of all, the packaged milk -- as
14 Mr. Sims clearly testified, delivery of packaged
15 milk was not a price establishment issue. It was
16 a check, in essence, with respect to the prices
17 established primarily from the bulk milk movement.
18 And that's clear in his testimony. So as far as
19 the Schepps, either the D.C. Circuit case or the,
20 you know, the Texas case are concerned, we're not
21 doing what was, you know, what was advocated in
22 those cases.

23 More importantly, or significantly, the
24 policies that, you know, are reflected for
25 interpretation of prices -- the setting of prices

1 at location points which is what the act permits,
2 the establishment of location prices, the policy
3 that the secretary has established for that can be
4 adjusted by him over time with changes in time.

5 There is certainly nothing in the Marketing
6 Agreement Act that says that the Cornell, you
7 know, metric model developed sometime in the 1990s
8 is cast into the -- into the fiber of the act,
9 which was written in '37.

10 I mean, the secretary has more than enough
11 authority to promulgate prices on the basis of a
12 record which reflects current realities, current
13 technologies, current competitive conditions,
14 current supply and demand.

15 And the proposals of DCMA and the testimony
16 of Mr. Sims and others here are -- provide a basis
17 that's fully within the authority of the secretary
18 to adjust these prices. And the motion should be
19 denied, without any merit whatsoever.

20 JUDGE HILLSON: Mr. Stevens?

21 MR. STEVENS: With all due respect to
22 my eloquent colleague --

23 JUDGE HILLSON: Which one is?

24 MR. STEVENS: Well, they're eloquent,
25 certainly. But Mr. English is the one I'm

1 speaking to at this time.

2 I have to agree with Mr. Beshore. There is
3 some history on this certainly, but the secretary
4 is free to change his position in these matters.

5 This record is going to be reviewed.
6 Certainly, the parties are able to make any legal
7 arguments they want in briefs. And those are
8 subject to your review until such time as you
9 certify the transcript and then they're subject to
10 review by the administrative officials who have
11 the final authority to rule on any motions that
12 are filed in these hearings, as they do when they
13 issue the decisions.

14 So I agree with the points made by
15 Mr. Beshore. This record should continue. The
16 hearing should continue. The legal positions can
17 be staked out in the briefs, considered, and dealt
18 with during the course of this proceeding.

19 JUDGE HILLSON: Well, given that the
20 secretary has decided to go ahead with this
21 hearing in the first place and full well knowing
22 the type of evidence that was already existing, I
23 believe, I'm going to deny the motion.

24 Certainly, the secretary can -- the secretary
25 decided to hold the hearing; the secretary is the

1 one who makes the decision in this hearing. And I
2 think we're going to continue with the hearing, so
3 I'll deny the motion.

4 And you're invited, Mr. English, to call your
5 first witness.

6 MR. ENGLISH: Thank you, Your Honor.

7 Actually, as I stated at the outset, two of
8 the people whose names I provided are not my
9 clients, but I certainly asked for the opportunity
10 to put their names out. I think Mr. Hitchell
11 wanted to go next, and he is not my client.

12 JUDGE HILLSON: I see.

13 MR. ENGLISH: But, therefore, he is not
14 really my witness, although he's on my side.

15 JUDGE HILLSON: You gave me a list of
16 witnesses that --

17 MR. ENGLISH: Yes, I think I did. But at the
18 outset, I made it clear that I represented Dean
19 Foods and NDH, and I didn't want the record to
20 reflect otherwise.

21 JUDGE HILLSON: So Mr. Hitchell will be
22 testifying on his own, then?

23 MR. ENGLISH: Yes. Mr. Hitchell --

24 JUDGE HILLSON: He has a written statement,
25 and he'll be reading that?

1 MR. ENGLISH: Yes.

2 JUDGE HILLSON: Okay. Thank you.

3 Come on up, Mr. Hitchell.

4 JOHN HITCHELL,

5 the witness herein, being first duly sworn on oath, was
6 questioned and testified as follows:

7 JUDGE HILLSON: Can you please state your
8 name and spell it for the court reporter?

9 THE WITNESS: My name is John Hitchell.
10 J-o-h-n, last name is H-i-t-c-h-e-l-l.

11 JUDGE HILLSON: And, Mr. Hitchell, you have a
12 written statement which, I assume, you are going
13 to read and you want it in evidence. I'm going
14 mark it at this point as Exhibit 30. And you may
15 testify.

16 STATEMENT BY JOHN HITCHELL

17 THE WITNESS: Thank you.

18 I'm employed by the Kroger Company
19 Manufacturing Group as a general manager for Raw
20 Milk Procurement. I'm appearing in opposition to
21 the proposed Class 1 differentials in Proposal
22 No. 1.

23 The Kroger Company operates four fluid
24 distributing plants that are regulated handlers in
25 the federal orders under discussion at this

1 hearing.

2 Winchester Farms, located in Winchester,
3 Kentucky, and Westover Dairy, located in
4 Lynchburg, Virginia, are regulated in Order No. 5.
5 Heritage Farms Dairy, located in Murfreesboro,
6 Tennessee, and Centennial Farms Dairy, located in
7 Atlanta, Georgia, are regulated in Federal Order
8 No. 7.

9 The Kroger Company believes that the
10 implementation of the proposed Class 1
11 differentials will disrupt traditional pricing
12 relationships dating back to the Class 1
13 differentials mandated in the 1985 Farm Bill and
14 reestablished during the federal order reform in
15 1999 between fluid handlers located inside and
16 outside Federal Order No. 5 and Order 7 and place
17 our dairy plants in an unacceptable competitive
18 situation.

19 Winchester Farms has operated since 1982, and
20 the plant has serviced the Cincinnati markets and
21 part of West Virginia within Federal Order 33 and
22 the Louisville Order No. 5 market since its
23 inception. The Order 33 sales represent
24 approximately 53 percent of the plant's sales,
25 Class 1 sales, and the sales of Order 5 represent

1 44 percent.

2 The relationship between Winchester Farms and
3 their competitors located in Louisville and the
4 Cincinnati market has remained unchanged since the
5 increase in the differentials mandated in the '85
6 Farm Bill and the adjustments in the Class 1
7 differentials implemented in 2000, with the
8 conclusion of the federal order reform process in
9 1999.

10 The proposed increase in Class 1
11 differentials contained in this hearing would
12 raise the differential at Winchester 40 cents a
13 hundredweight. The Louisville differential would
14 be increased only 10 cents per hundredweight, and
15 the differentials in the Cincinnati markets are
16 untouched by this proposal.

17 Implementation of these differentials would
18 place Winchester Farms in an unacceptable,
19 uncompetitive position compared to their fluid
20 competitors located in Order 33 and Louisville.

21 The Kroger Company is requesting that the
22 Class 1 differential for Winchester Farms and
23 Louisville, Kentucky, remain at the current level
24 of \$2.20 per hundredweight in order to maintain
25 the traditional spread in Class 1 differentials

1 between Winchester and their competitors in
2 Cincinnati, West Virginia, and Louisville.

3 At the minimum, the Kroger Company requests
4 that the Class 1 differential increase at
5 Winchester be no greater than the proposed Class 1
6 differential increase at Louisville of ten cents
7 per hundredweight. The proposed increase in the
8 Class 1 differential at Westover Dairy is 40 cents
9 per hundredweight.

10 Westover has serviced a Class 1 fluid
11 customer located in Order 1 for over six years.
12 Implementation of these proposals would place
13 Westover in an uncompetitive position compared to
14 the fluid processors located in Order No. 1, which
15 is not being addressed at this hearing and will
16 not receive an increase in Class 1 differentials.

17 In addition, dairy farmers located in Mid
18 Atlantic states produce the vast majority of the
19 raw milk supply to Westover Dairy. The current
20 pricing structure is generating a sufficient
21 income to dairy farmers to supply the majority of
22 Westover's raw milk requirements.

23 Implementation of the proposed differential
24 at Westover Dairy will place the plant in an
25 uncompetitive situation compared to fluid

1 processors located in Order 1 who are in a
2 position to service their customer. In addition,
3 the current pricing structure has maintained the
4 local milk supply for the plant. For these
5 reasons, the Kroger Company requests that the
6 Class 1 differential remain at current level \$2.80
7 per hundredweight.

8 The Kroger Company has operated Heritage
9 Farms since 1980. When Heritage Farms opened, the
10 plant serviced the Atlanta market. The sales
11 within the Atlanta market continued to increase to
12 a level that justified the Kroger Company making a
13 significant capital investment in 1996 when we
14 opened Centennial Farms Dairy.

15 Part of the justification for the facility
16 was based on the traditional spread of Class 1
17 differentials between Murfreesboro, Tennessee and
18 Atlanta, Georgia, of 50 cents per hundredweight.

19 The proposed increase in the Class 1
20 differential at Heritage is 30 cents. The
21 proposed increase in Class 1 differentials at
22 Centennial Farms is 70 cents per hundredweight.

23 If adopted, as proposed, the spread of
24 Class 1 differentials between Heritage Farms and
25 Centennial will increase from 50 cents to 90 cents

1 price levels between plants regulated in Order
2 No. 5 and/or Order No. 7 and produce competitive
3 inconsistencies where none exist today.

4 For these reasons, the Kroger Company
5 requests that the secretary not adopt the proposed
6 changes in Class 1 differentials in Order No. 5
7 and Order No. 7.

8 Thank you.

9 JUDGE HILLSON: Does anyone have questions of
10 Mr. Hitchell?

11 Go ahead, Mr. Beshore.

12 EXAMINATION

13 BY MR. BESHORE:

14 Q. Good afternoon, John.

15 A. Good afternoon.

16 Q. I just have a couple of questions.

17 The references to the '85 Farm Bill in prices
18 that were set at that time, is your memory the same as
19 mine that that bill said something to the effect that
20 the prices that went into effect then were good for two
21 years and after that the secretary could hold hearings
22 and make adjustments in them?

23 A. Certainly, they have made -- I don't know
24 about the two years. That I do not recall. As we all
25 know, adjustments were made in 1999, 2000. And as we

1 know, the basic spread between the plants within the
2 markets did not change between the 1985 numbers and the
3 2000 numbers. The level certainly increased in all of
4 the markets, but the basic spread between the plants
5 remained basically unchanged, maybe a penny or two
6 here, but nothing drastic.

7 Q. Okay. With respect to the Lynchburg sales
8 into Order 1: Now, Order 1 is north of Lynchburg?

9 A. That is correct.

10 Q. Okay. And you have a plant in the Order 1
11 area itself, do you not?

12 A. That is correct.

13 Q. Okay. Couldn't you just service those
14 accounts from your plant in Pennsylvania rather than
15 the plant in Virginia?

16 A. That is the account that is serviced.

17 Q. But you've got a plant -- you've got to help
18 me with that. You're servicing your Turkey Hill stores
19 with certain products out of Lynchburg?

20 A. Fluid milk, yes, that is correct.

21 Q. Okay. Has Conestoga been closed?

22 A. No.

23 Q. Okay. So you're servicing it both out of the
24 plant in Order 1 in Pennsylvania, Conestoga, and out of
25 Lynchburg?

1 A. That's correct.

2 Q. Okay. Couldn't you service it completely out
3 of Conestoga?

4 A. No, could not.

5 Q. Lack of plant capacity?

6 A. That's correct.

7 Q. When were the -- you refer to investments in
8 the Centennial Dairy in Atlanta. When were those
9 investments made?

10 A. 1996 is when the plant was open. The plant
11 was purchased in 1995, I believe.

12 Q. Okay. So that was an existing plant?

13 A. It was an existing plant that was not
14 operating. It was -- it was a plant that had been a
15 dairy plant, was closed, and we purchased it from the
16 previous owner.

17 Q. Okay. And when you bought it in '95, it
18 certainly wasn't in reliance upon what you knew to be
19 the prices in 2007, right?

20 A. That is correct.

21 MR. BESHORE: Okay. Thank you.

22 JUDGE HILLSON: Does anybody else have
23 questions?

24 Mr. English. Go ahead.

25 EXAMINATION

1 BY MR. ENGLISH:

2 Q. My name is Charles English. I'm here for
3 Dean Foods Company and National Dairy Holdings.

4 Mr. Hitchell, how long have you been in this
5 business?

6 A. When I had hair. I have been in the
7 business -- I've worked for Kroger since 1980. I've
8 had this job since 1987.

9 Q. And you've attended a number of federal order
10 hearings, correct?

11 A. Yes, I have.

12 Q. And testified in a number?

13 A. Yes, I have.

14 Q. And a lot of the issues that you considered
15 are competitive conditions both vis-a-vis other plants
16 and the ability to get milk into your facilities,
17 correct?

18 A. That's correct.

19 Q. And could you foresee circumstances if the
20 proposals are adopted where an operator of a plant
21 nearby Federal Orders 5 or 7 but outside 5 or 7 in,
22 say, 32 or 33 would look at -- and by the way, let's
23 say it's a plant that already has sales in the Orders 5
24 or 7 or both.

25 And do you think if these proposals were

1 adopted, such facilities would have an opportunity to
2 look at being pooled under Orders 5 and 7 as an
3 alternative to be pooled under 32 and 33?

4 A. Certainly. They would certainly have to be
5 given the opportunity to do so, or there would be the
6 temptation to do so.

7 Q. And temptation to do so would involve, of
8 course, looking for accounts to serve at competitive
9 prices, correct?

10 A. That's correct.

11 Q. And the adoption of Proposals 1, 2, and 3
12 would provide such opportunities because, as you
13 testified, your facilities would face higher costs but
14 theirs would not, correct?

15 A. That is correct.

16 Q. And that's what you mean, near the end of
17 your statement, when you say, As we have attempted to
18 illustrate the increasing Class 1 differentials in the
19 Southeast in isolation will generate competitive
20 discrepancies with the surrounding market; is that
21 correct?

22 A. That's correct.

23 Q. And that's not just theoretical; that's what
24 happened in the past. We've seen that in this
25 industry, correct?

1 A. Yes, that is correct.

2 Q. With respect to any emergency, do you believe
3 there is an emergency here?

4 A. I believe this situation has taken literally
5 the time that I have had this job in 20 years to get to
6 the point we are today. So this is not something
7 that's happened overnight. I questioned the emergency
8 basis of this hearing, and I would certainly think that
9 we could spend some more time thinking of some -- of
10 some other situations and some other potential ways to
11 solve this problem than to put pooled plants in an
12 uncompetitive situation versus facilities, especially
13 on the edge as I've said in my testimony, which are not
14 going to get Class 1 differential increases and will
15 put us into competitive -- put us in an uncompetitive
16 situation.

17 We are sensitive to the plight of our
18 suppliers and dairy farmers' situation. But I would
19 hope that everyone sitting in this room would not want
20 to put their customers in an uncompetitive
21 disadvantage. And implementation of these proposals
22 will embark -- especially Winchester and Westover --
23 will put us in that position.

24 Q. And it would not surprise you if plants
25 operated by other entities had similar situations as

1 you've described for your operation?

2 A. I certainly don't want to testify or base it
3 on anyone else's other situation. But my guess is
4 other people will be testifying that to have plants
5 that are in close proximity to ours, they would have
6 similar concerns.

7 MR. ENGLISH: Thank you very much. That's
8 all I have.

9 JUDGE HILLSON: Any questions from the AMS
10 table?

11 MR. ROWER: No.

12 JUDGE HILLSON: Do you want to redirect,
13 Mr. Beshore? I mean, not redirect.

14 MR. BESHORE: Not redirect. Just one
15 other --

16 JUDGE HILLSON: All right.

17 MR. BESHORE: -- detail or two about the
18 Lynchburg sales in Order 1.

19 FURTHER EXAMINATION

20 BY MR. BESHORE:

21 Q. For clarification of the record, the Turkey
22 Hill stores are Kroger stores?

23 A. Turkey Hill is a wholly owned subsidiary of
24 the Kroger Company. It's an LLC. We own -- we have
25 the majority ownership, that's correct.

1 Q. Okay. And they're convenience stores
2 throughout the Mid Atlantic area?

3 A. That's correct.

4 Q. And are the majority of those in
5 Pennsylvania?

6 A. I really don't know. I believe so, but I'm
7 not real sure.

8 Q. In any event, that's where the Turkey Hill
9 plant, which is a Kroger plant, is, is in Pennsylvania?

10 A. That is correct.

11 Q. Okay. And it's a pool plant under Order 1?

12 A. Yes, it is a pool plant under Order 1.

13 MR. BESHORE: Okay. That's all. Thanks.

14 JUDGE HILLSON: Go ahead, Mr. English.

15 MR. ENGLISH: I'm sorry, Your Honor. I've
16 got one.

17 FURTHER EXAMINATION

18 BY MR. ENGLISH:

19 Q. Mr. Hitchell, the proposals are described as
20 temporary. And leaving aside how long temporary might
21 be, to the extent the competitive situation that you
22 described results in lost sales, are lost sales
23 temporary?

24 A. Generally, no. Generally lost sales are
25 fairly permanent.

1 MR. ENGLISH: Thank you.

2 JUDGE HILLSON: Any questions, Mr. Smith?

3 MR. SMITH: Yes.

4 JUDGE HILLSON: Come on up.

5 EXAMINATION

6 BY MR. SMITH:

7 Q. Good afternoon.

8 A. Good afternoon.

9 Q. My name is Dan Smith. I'm representing the
10 Kentucky Dairy Development Council, the Georgia Milk
11 Producers, and North Carolina Dairy Farmers Producers
12 Association, and U.S. Milk.

13 I'd just like to ask you if you could explain
14 in a little more detail the competitive disadvantage
15 that the plant in Winchester will be placed at, how
16 raising the Class 1 price 40 cents in the market would
17 affect the sales of milk in Cincinnati and surrounding
18 areas?

19 A. The Class 1 differential would remain
20 unchanged for our competitors that are based in
21 Cincinnati, less than 100 miles away. We will be
22 receiving a 40 cent per hundredweight increase in
23 Class 1 differential that we will pay on the milk since
24 we're pooled on Order 5.

25 Our competitors in Cincinnati and our

1 competitors in the market surrounding the Federal
2 Order 5, they could also have a lower Class 1 price
3 potentially, can shift milk into the market area, will
4 not have that type of price increase. That is a
5 substantial price increase of well over two cents a
6 gallon.

7 Q. That's the base of the change. How do you
8 think that would affect sales percentage-wise if you
9 could just fill out the picture of how the milk would
10 move into the Cincinnati market and the degree to which
11 you think the sales will be affected by that two to
12 three cent increase?

13 A. The sales -- it would be difficult to tell
14 you how the sales would move out. Basically, we would
15 be in an uncompetitive situation and then not be able
16 to meet the same type of raw cost that our other
17 competitors would have in Cincinnati. Hence, in that
18 case, we could lose sales out of our plant in
19 Winchester going into Cincinnati. And the percentages,
20 I really don't know. I hope we don't have to face
21 that. That's the point of my testimony.

22 Q. You described a theoretical impact, which
23 you've also described that you've had stable marketing
24 environment for over 20 years. And so the question is
25 whether the -- your established relationships with your

1 customers would be so affected by this amount of change
2 in the base price. That's the question.

3 A. It would be.

4 MR. SMITH: Okay. Thanks.

5 JUDGE HILLSON: Another question?

6 MR. BESHORE: Just a follow up.

7 FURTHER EXAMINATION

8 BY MR. BESHORE:

9 Q. Your customers are your own stores; is that
10 correct?

11 A. That is correct. Not totally. We also have
12 sales outside of the company as well.

13 JUDGE HILLSON: Did you have a question, man
14 in the back? Come up here and identify yourself,
15 please.

16 THE WITNESS: Gladly. My name is Blake
17 Sumners, and I'm a dairy farmer.

18 Can I go ahead?

19 JUDGE HILLSON: You want to ask him a
20 question?

21 THE WITNESS: Yes.

22 EXAMINATION

23 BY MR. SUMNERS:

24 Q. Aren't there over-order premiums that can
25 maybe be used that could be negotiated with the co-op

1 supply in your plant --

2 A. There are over-order premiums.

3 Q. -- so you can keep competitive with other
4 plants? Isn't this one of the things that co-ops do
5 for milk plants all the time, make sure that they're in
6 a competitive situation with other milk plants --

7 A. Well --

8 Q. -- credits, and so forth?

9 A. There are credits, yes.

10 Q. Well, wouldn't that take care of 40 cents?

11 A. I guess that's something I'll have to discuss
12 with my milk supplier depending on the outcome of the
13 hearing.

14 Q. So raising the Class 1 differential when
15 you've got over-order premiums a lot more than 20 or 40
16 cents, isn't there negotiating room to take care of all
17 that?

18 A. Historically, credit has not been granted on
19 differences in over-order in Class 1 differentials.

20 Q. The competitive credit has been granted,
21 hadn't they?

22 A. Not on Class 1 -- not on differences in
23 Class 1 differentials. Historically, no, that has not
24 happened.

25 Q. Well, can you explain how they work?

1 A. Yeah. If the over-order premium is different
2 from one market that we sell into than another, we get
3 a credit base on the difference of over-order premium.

4 Q. But it has nothing to do with the --

5 A. Historically, no.

6 Q. -- federal order structure.

7 A. Historically, no.

8 Q. But that is possible?

9 A. We'll see.

10 MR. SUMNERS: That's all.

11 JUDGE HILLSON: Do you have a question,
12 Mr. Smith?

13 MR. SMITH: I'd just like to follow up.

14 FURTHER EXAMINATION

15 BY MR. SMITH:

16 Q. I'm aware -- and I'm a Yankee from the north,
17 so it takes me a while to get my mind here in the
18 south, but I'm aware that you supply your own plant.
19 So the real question is whether the margins between the
20 relative stores are enough to absorb this two to three
21 cent increase taking into account premiums as well as
22 the need for more milk.

23 And is it your testimony that -- let me ask
24 you that, as I ask beyond theoretical to the actual,
25 how the price increase would play out. It's against

1 your competitors in the supermarket business; is that
2 correct?

3 A. My raw cost would be higher than the
4 processing competitors by 40 cents than it would in
5 Cincinnati. That's my answer.

6 Q. And translated to per gallon, that amount is?

7 A. Two, two and a half cents.

8 Q. And how that amount of milk -- that amount of
9 increase, your testimony is, would -- is enough to move
10 customers between supermarkets?

11 A. Yes.

12 MR. SMITH: Thank you.

13 JUDGE HILLSON: I'll receive Mr. Hitchell's
14 written statement as Exhibit No. 30. That's
15 received into evidence.

16 (Exhibit No. 30 received.)

17 JUDGE HILLSON: And you may step down,
18 Mr. Hitchell.

19 THE WITNESS: Thank you.

20 JUDGE HILLSON: Before I forget, I've been --
21 I do want to make sure I accommodate any other
22 producer witnesses who haven't spoken up yet and
23 will only be here today.

24 Who is next on the list of witnesses,
25 Mr. English?

1 MR. ENGLISH: Your Honor, as it turns out,
2 Mr. Rutherford, from International Dairy Food
3 Association, has gotten here. And notwithstanding
4 the fact that we thought he would go tomorrow, he
5 is prepared to go today.

6 JUDGE HILLSON: Are you calling him, or is
7 he --

8 MR. ENGLISH: He's on his own behalf. I'm
9 just handing out his statement, but I am -- and
10 there are -- there are -- because of time
11 constraints, because we did not expect him to be
12 on today, we have a limited number of copies. But
13 we have a copy for the folks at the government
14 table, a copy for you and the court reporter,
15 and --

16 JUDGE HILLSON: Okay.

17 JOHN RUTHERFORD,
18 the witness herein, being first duly sworn on oath, was
19 questioned and testified as follows:

20 JUDGE HILLSON: Please state your name and
21 spell it for the record.

22 THE WITNESS: My name is John Rutherford,
23 R-u-t-h-e-r-f-o-r-d.

24 JUDGE HILLSON: And, Mr. Rutherford, I'm
25 marking your written testimony as Exhibit 31. And

1 you may testify.

2 STATEMENT BY JOHN RUTHERFORD

3 THE WITNESS: My name is John Rutherford. I
4 have worked for the International Dairy Foods
5 Association for nearly seven years and currently
6 serve as senior economic research analyst, where I
7 conduct analyses of economic policies in dairy
8 markets.

9 The Milk Industry Foundation is a constituent
10 organization of IDFA. The 115 member companies of
11 MIF process, distribute, and market approximately
12 85 percent of the U.S. fluid milk, yogurts,
13 cottage, sour cream, soft cheeses, eggnog, cream,
14 dairy dressings, and dips in the U.S.

15 I'm appearing today on behalf of MIF to voice
16 opposition to the portions of Proposals 1, 2, and
17 3 of the hearing notice which seek adjustments to
18 the Class 1 differentials for many, if not all, of
19 the counties of the Appalachian, Southeast, and
20 Florida milk marketing areas.

21 In addition, proponents ask USDA for
22 consideration on an emergency basis. For the
23 reasons to follow, MIF is opposed to all of the
24 increases and differentials contained in these
25 proposals and strongly disagree that an emergency

1 situation exists.

2 No. 1, these proposed changes are not
3 necessary.

4 The key of the Federal Milk Marketing Order,
5 FMMO, system is to ensure an adequate supply of
6 milk for Class 1 needs. Before making a change to
7 these orders, USDA must determine that an adequate
8 supply of milk could not be found to supply
9 Class 1 needs in the Appalachian, Southeast, and
10 Florida marketing areas. I believe you will find
11 this not to be the case.

12 MIF has many members doing business in and
13 around these marketing -- these three marketing
14 areas. None of the MIF members responding to our
15 survey about this hearing indicated they are
16 having trouble obtaining an adequate supply of
17 milk for these areas.

18 To be sure, there are periods of when it is
19 necessary to source milk from more distant
20 locations. But this has been the case for many
21 years -- but this has been the case many years in
22 these marketing areas.

23 When milk is brought in, its price will be at
24 least the FMMO minimum but may very well include
25 additional charges or over-order premiums to

1 compensate the seller for giving up that milk.
2 This over-order money is paid to the entity
3 supplying the additional milk and affects only the
4 milk supplied.

5 No. 2, the federal order system is the wrong
6 policy option.

7 The proponents cite declining milk production
8 in the Southeast as evidence that the
9 differentials in that order should be raised. For
10 a couple reasons, this fact should not even be
11 considered.

12 One reason is that when milk is needed -- is
13 that when milk is needed and only at that time, it
14 is identified, purchased, and transported to the
15 plant where it is needed.

16 For USDA to consider whether or not a problem
17 exists in obtaining sufficient milk for Class 1
18 needs, the question is not the location of the
19 source, but, rather, is milk of any origin
20 available for those Class 1 plants.

21 There is no question that milk production has
22 been declining over many years in the states which
23 are part of the Appalachian, Southeast, and
24 Florida marketing areas.

25 But we have a national market, meaning milk

1 is available to move across states and regions. A
2 reduction in local production does not necessarily
3 mean a short supply if milk is from -- if milk
4 from a more distant location is readily available
5 to replace it.

6 The second reason for looking past decreases
7 in milk production in a specific region is the
8 false implication that federal order regulations
9 are the appropriate tools for addressing that
10 issue.

11 Lloyd Day, administrator of the Agricultural
12 Marketing Service, speaking recently before the
13 house committee on agriculture subcommittee on
14 livestock, dairy, and poultry stated it very
15 clearly, in quotes: The marketing order program
16 is not a price or income support program, end
17 quote.

18 He adds, quotes: USDA operates the milk
19 price support program and the milk income loss
20 contract, MILC, for price and income support
21 purposes, end quote.

22 The federal orders are not the policy outlet
23 for any group seeking to alter broad based
24 structural changes in regional milk production due
25 to the underlying economics of producing milk in

1 any one region.

2 No. 3, Class 1 differentials cannot be
3 changed in one region of the country without
4 affecting milk marketing in another.

5 It is important for USDA to remember that
6 ours is a national market for milk. Farm milk can
7 be transported over large distances before
8 processing. Manufactured dairy products, whose
9 values form the basis for federal order regulated
10 minimum milk prices, are sold all over the country
11 and, indeed, the world.

12 Fluid milk is bottled in larger plants,
13 distributed over wider areas, and generally has a
14 longer shelf life than even ten years ago.

15 The Class 1 differentials used to determine
16 minimum price paid by plants reflect this national
17 market. Every differential must -- repeat,
18 must -- align with the market reality of sourcing
19 milk for that specific location versus that
20 marketed in neighboring states and regions.

21 The lengthy process of creating the
22 differentials to be adopted during the federal
23 order reform process implemented on January 1,
24 2001, involved years of study and debate among a
25 number of market participants, consultants, and

1 academics over alternatives for the structure of
2 the current differentials.

3 The changes proposed for this hearing violate
4 almost every aspect of this prior spirit of study
5 and analysis. The most obvious is that the fact
6 of a national market has been left aside for an
7 arbitrary selection of these three marketing
8 areas.

9 These changes will alter the competitive
10 relationships that exist between various plant
11 locations within and outside of these orders. The
12 most egregious of these impacts will be along the
13 outside boundaries of these orders taken as a
14 whole.

15 Historical market factors have led to the
16 structure of Class 1 plants at their current
17 locations. Analysis of differentials on a
18 national scope would include these factors and
19 propose changes that would reflect and complement
20 the current relationships.

21 In fact, if a problem really existed, the
22 proposed changes should be correcting them. But
23 as already noted, MIF members have not had a
24 problem sourcing a sufficient supply of milk for
25 Class 1 needs in these three marketing areas.

1 In addition, the MIF members will testify to
2 with specific examples.

3 And I will add that one just did testify to
4 this.

5 These changes create problems by
6 significantly altering price relationships and
7 interfering with markets that have co-existed for
8 years.

9 Four, these proposals will discourage Class 1
10 sales.

11 The proposed changes to the Class 1
12 differentials will be detrimental to Class 1 sales
13 volumes for processors within these regions. As
14 stated above, milk is moved from more distant
15 production areas only when it is needed for
16 Class 1 use. The additional costs enticing the
17 seller to give up that milk and get it to the
18 plant are the only incremental costs in the
19 system.

20 If the differentials are raised, as Class 1
21 plants at all locations throughout these orders
22 will be forced to pay more for all milk used in
23 Class 1 all the time. Remember, increasing the
24 differentials by as much as \$1.70 per
25 hundredweight means adding 14.7 cents to the cost

1 per gallon of milk. But any increase in Class 1
2 differentials means additional costs for milk.

3 I'm not aware of any study of fluid milk
4 sales that does not find a decline in sales volume
5 when prices rise. Per capita consumption of fluid
6 milk has been declining for many years, and these
7 changes will add pressure to accelerate that
8 trend.

9 Even though ensuring an adequate supply of
10 milk for Class 1 needs is an objective of the
11 federal orders, USDA should consider if achieving
12 this goal is worth accomplishing at the expense of
13 suppressing Class 1 sales.

14 Five, there is no emergency.

15 I stated this earlier, but I will reiterate
16 that MIF member company plants are not having
17 trouble obtaining an adequate supply of milk for
18 Class 1 needs in the Appalachian, Southeast, and
19 Florida marketing areas. Because there is an
20 adequate supply readily available, there obviously
21 is no emergency.

22 Remember, it is producers/cooperatives who
23 are seeking these increases, not the companies
24 that actually buy milk to supply the Class 1
25 products for these markets.

1 Summary.

2 The key purpose of federal orders is to
3 ensure an adequate supply of milk to satisfy
4 Class 1 needs. It is not about promoting milk
5 production or supporting farm milk income in any
6 specific region of the country.

7 While the proponents return to the theme of
8 eroding milk production in the Southeast and the
9 need, through various aspects of these proposals,
10 to increase milk prices, they offer no evidence
11 that an adequate supply of milk cannot be
12 obtained.

13 Class 1 differentials cannot be selectively
14 altered without disrupting the existing
15 relationships in the marketplace. USDA should
16 require a comprehensive analysis of the national
17 market before considering increases to any Class 1
18 differentials.

19 In addition, these proposed changes will
20 discourage sales of the very products they are
21 intending to supply. The consequence of reduced
22 fluid milk sales volume is another company of the
23 scope of analysis that should be undertaken when
24 considering changes to differentials.

25 The changes to Class 1 differentials in

1 proposals 1, 2, and 3 should not be adopted by
2 USDA, and it almost goes without saying -- but I
3 will once more -- that this hearing should not be
4 considered on an emergency basis.

5 Thank you.

6 JUDGE HILLSON: Questions for Mr. Rutherford.
7 Any questions? Mr. Beshore, proceed.

8 EXAMINATION

9 BY MR. BESHORE:

10 Q. Mr. Rutherford, what would -- what would it
11 take in IDFA's eyes to establish a situation where
12 there is problems in having an inadequate supply of
13 Class 1 milk?

14 A. Class 1 plants saying they are having a hard
15 time getting milk.

16 Q. Saying they're having a hard time getting
17 milk?

18 A. Well, outside of auditing them, we're taking
19 them at their word. If they say they're having trouble
20 getting milk -- if we're discussing the situation and
21 they say, We are not able to get the milk; we need to
22 maybe -- maybe we should do something in the federal
23 order system to make sure we can get milk, that's what
24 I mean.

25 Q. So you took your survey. Did you take that

1 after the hearing notice was issued?

2 A. Before the hearing notice, we didn't have
3 much reason to.

4 Q. Okay. So the answer is yes --

5 A. Yes.

6 Q. -- after?

7 A. Yes.

8 Q. So your survey consisted of, Okay, here is a
9 hearing notice that says the price of milk is going up;
10 we want to take a position at the hearing. Can you
11 tell us whether you're having any trouble getting milk?

12 Is that what the survey was?

13 A. Not even close.

14 Q. Okay.

15 A. The premise of your question was not -- is
16 not how we asked it. We presented the fact that a
17 hearing had been announced.

18 Q. All right.

19 A. And we wanted to know what our members --
20 what they were planning to do as a group about it,
21 because often a group of proposals will be out that
22 some members are for and some members are against. And
23 in those cases, IDFA will stand aside and let the
24 membership determine what's going to happen.

25 So we were pooling our membership to see what

1 they -- whether they thought we should be part of this
2 hearing or not.

3 Q. Okay.

4 A. And they said, yes, testify we are not having
5 a problem.

6 Q. Okay. When there was a hearing notice that
7 said the price of milk -- minimum prices are proposed
8 to go up, and you asked your members whether they
9 wanted to support or oppose that proposal, correct?

10 A. No. It was a little more subtle than that.
11 It was that we wanted to gauge their support for our
12 testifying or not, maybe is a cleaner way to say it.

13 Q. Okay. Did you suggest to them what you would
14 testify if they -- did you tell them what the testimony
15 was going to be before you asked them whether they
16 wanted you to give it or not?

17 A. No.

18 Q. Okay.

19 A. It would have surprised us, to be sure. But
20 if they all said, Sure, go ahead and do it, we would
21 have been -- I would have been saying much different
22 comments.

23 Q. If they told you to come and support the
24 proposals?

25 A. Right. Or if, like I said earlier, if there

1 had been a split in the -- how the membership felt
2 about the proposals, then I would not be here at all.

3 Q. Okay. Now, so nobody wants their -- nobody
4 wants their regulated price of milk to go up, minimum
5 price of milk to go up, is what you're telling us,
6 correct, none of your members?

7 A. None of them said do not testify against the
8 raising of the differentials. They didn't state it the
9 way you said.

10 Q. Okay. So is that how it was put to them? Do
11 you want us to testify against raising the
12 differentials?

13 A. No, that is not.

14 Q. Okay. It sounds like it from the way you
15 answered the question. You said none of them told you
16 not to testify against raising the differentials.

17 JUDGE HILLSON: Is that a question? Is
18 that --

19 MR. BESHORE: (Indicates affirmatively).

20 JUDGE HILLSON: I guess you can answer it.

21 THE WITNESS: We surveyed on whether they
22 thought we should testify against the differential
23 increase -- actually, against the proposals. And
24 the only one that I'm really testifying against is
25 the differentials decrease.

1 BY MR. BESHORE:

2 Q. Okay. You're not testifying against changing
3 the transportation credit provisions?

4 A. No, I am not.

5 Q. Okay. Or the changes in the diversion
6 requirements?

7 A. Correct.

8 MR. BESHORE: Okay. That's all the questions
9 I have.

10 JUDGE HILLSON: Anyone else have questions
11 for Mr. Rutherford?

12 Nothing from the government table, nothing
13 back there?

14 Mr. Rutherford, I'm going to admit -- receive
15 into evidence your written statement as Exhibit
16 31.

17 (Exhibit No. 31 received.)

18 JUDGE HILLSON: You may step down.

19 Why don't we take that second ten-minute
20 break right now.

21 MR. ENGLISH: Okay.

22 JUDGE HILLSON: We'll come back at about 12
23 minutes -- make it a quarter after 4:00.

24 (Brief recess was taken.)

25 JUDGE HILLSON: Let's go back on the record.

1 And who is the next witness?

2 MR. ENGLISH: Rob Cottet, R-o-b, C-o-t-t-e-t,
3 with National Dairy Holdings.

4 JUDGE HILLSON: Okay. He's not going to have
5 a written statement.

6 MR. ENGLISH: He's not going to have a
7 written statement.

8 JUDGE HILLSON: Okay. Would you please raise
9 your right hand?

10 ROB COTTET,
11 the witness herein, being first duly sworn on oath, was
12 questioned and testified as follows:

13 JUDGE HILLSON: Could you please state your
14 name and spell it for the record?

15 THE WITNESS: Rob Cottet, C-o-t-t-e-t.

16 JUDGE HILLSON: Okay. Your witness, per
17 hundredweight.

18 DIRECT EXAMINATION

19 BY MR. ENGLISH:

20 Q. Mr. Cottet, by whom are you employed?

21 A. I'm employed by National Dairy Holdings.

22 Q. And what is your title?

23 A. Executive vice-president for development.

24 Q. And where is National Dairy Holdings located?

25 A. We're based out of Dallas, Texas.

1 Q. And could you briefly describe your
2 background in the dairy industry?

3 A. Yes. When I left school, I was -- went to
4 work for a Kraft Dairy Group of Philadelphia. I worked
5 for them until 1998 and went to work for -- 1988.

6 Kraft Dairy Group sold to General Foods, and
7 I went to work for, at that time, a company called
8 Morning Star, which owned dairies, which was, about
9 1992, was purchased by Suiza Foods. I was employed by
10 them until the purchase of Dean Foods in 2002. And
11 National Dairy Holdings was formed at that time.

12 I was president of Velda Farms at the time of
13 the sale, and Velda Farms became part of National Dairy
14 Holdings, and I worked for National Dairy Holdings.

15 Q. And could you briefly describe National Dairy
16 Holdings?

17 A. It's a national -- a quasi national dairy
18 processor. We have facilities in different parts of
19 the country. We're financially backed -- or half owned
20 by Dairy Farmers of America. However, we're managed
21 independently by a private management group. And DFA
22 is not involved in our day-to-day decision-making
23 process.

24 Q. And what facilities would be impacted by a
25 proposal in consideration for today?

1 A. Velda Farms of Florida, Coburg Dairy in
2 Charleston, South Carolina, Flav-O-Rich Dairy in
3 London, Kentucky, and UC Milk Company in Madisonville,
4 Kentucky, and Dairy Fresh in Alabama.

5 Q. And do you, for National Dairy Holdings,
6 recognize that there are problems in the Southeast?

7 A. We recognize there is problems with milk
8 production and due to population growth, geographic
9 issues. We don't necessarily agree with the process of
10 fixing the problem by sharing or pooling purposes. If
11 there is a need for dollars, we think it should go
12 directly to the area that's concerned or directly to
13 the farmer in that area that needs the relief.

14 Q. And do you have any position on the size of
15 federal orders?

16 A. Currently, we think they are probably too
17 large, and they probably should be addressed due to the
18 fact I just stated, geographic and population growth
19 areas. It probably should be addressing the size of
20 these orders and make them smaller.

21 Q. Has National Dairy Holdings had any
22 difficulty getting raw milk in the Southeast?

23 A. No, we haven't.

24 Q. And by the "Southeast" -- I know you haven't
25 been here the whole hearing. But we've been using the

1 terms "Southeast" to mean all three orders that have
2 been discussed at this hearing.

3 A. In the facilities that I mentioned, we had
4 had no difficulty getting fluid milk.

5 Q. Okay. Do you have any further comments you
6 would like to make?

7 A. I think one of the main issues on the -- that
8 I would like to address is the flow of milk from one
9 order to the next. And we feel that it should be on a
10 point-of-sale size than a point-of-origin size based on
11 where our facilities are at. We ship a lot of product
12 to the north out of most of our facilities, which can
13 go into different marketing orders. And these -- some
14 of these areas where there has been an increase in the
15 proposal orders, the increased price directly impacts
16 going north with milk.

17 Q. In fact, what's your -- where are your plants
18 in Florida?

19 A. Miami and Winter Haven.

20 Q. And if you don't go north from Miami, can
21 you -- do you have any sales from that plant?

22 A. Not particularly.

23 Q. What about price relationship issues as they
24 relate to the proposals, are there some price
25 relationship issues that concern you?

1 A. In what regard?

2 Q. With respect to plants and their relationship
3 to other plants.

4 A. Other plants? It concerns us with the new
5 increases that are on there. There is a couple in
6 particular that concerns us as a company. We'll use
7 Jacksonville coming into the Miami market. The
8 production facility in Jacksonville does ship into the
9 Miami market. Currently, there is a 60 cent
10 differential, which is rising, which would make it very
11 easily for them to ship milk into our area, into the
12 Miami market and be more competitively priced for the
13 product than we can be in that particular area.

14 Also, in the Coburg area, Charleston, South
15 Carolina, which is the Coburg Dairy, we have a facility
16 in -- we compete against Florence and one that's in
17 Spartanburg. Coburg is currently going to go up a
18 dollar. Those areas are going up -- I believe it's 50
19 cents -- I left my paper back at my desk there, but I
20 think it was 50 cents. We sell a lot of customers in
21 the Florence/Spartanburg area, and that would have a
22 direct impact on us.

23 Q. So you're already competing against those
24 facilities in Jacksonville --

25 A. Correct.

1 Q. -- to the north for Miami and for Charleston.

2 I think there may be a 30 cent difference.

3 A. Thirty, I think, is Spartanburg.

4 Q. Thirty for Florence and 50 for Spartanburg?

5 A. Right.

6 Q. All right. Nonetheless, you already compete
7 against those operations?

8 A. Correct.

9 Q. Okay.

10 A. Correct.

11 Q. So an analysis that compares a plant-to-plant
12 sale isn't what you -- is not the reality you deal
13 with. The reality you deal with is wholesale customers
14 out of the marketplace, correct?

15 A. Correct, correct.

16 Q. What about any commentary you have on the
17 emergency situation?

18 A. We're struggling to understand what the
19 emergency situation is right now. We've had no supply
20 issues with milk. We're not opposed to rate increases;
21 we're just opposed to them not being fairly implemented
22 in the marketplace to keep it competitive.

23 Q. In addition to Florida and South Carolina, do
24 you have a situation of -- about relationship in
25 Alabama?

1 A. We have one in Alabama where much of the milk
2 is heading north, which competes with Nashville Milk
3 coming south, which is -- I don't have it exactly in
4 front of me, the numbers. But it has -- with the
5 impending change, it could create a competitive
6 imbalance also.

7 Q. So those are the reasons why you're
8 against --

9 A. Ours is strictly a competitive balance, which
10 could directly impact the financial stability of our --
11 of some of our facilities, Coburg being one, just as I
12 believe the person that was up here, the dairy producer
13 from South Carolina stated. He didn't want to go
14 against the grain. He wanted to ship his milk to --
15 follow the flow of milking because of the pricing.

16 We have the same issues as a processer, if we
17 have to ship into another that is competitively
18 unbalanced. We acknowledge the freight cost it takes
19 the product to go up there. But we also have to pay a
20 difference in premium. That creates a double whammy on
21 the costing effect, which would make us noncompetitive.

22 Q. When you say "premium," you mean Class 1
23 differential?

24 A. Class differential. I'm sorry.

25 Q. That's all right.

1 And you're not here to testify about the
2 diversion limitations or the transportation credits,
3 correct?

4 A. No, I am not.

5 MR. ENGLISH: Okay. The witness is available
6 for cross-examination.

7 JUDGE HILLSON: Does anyone have questions of
8 this witness?

9 Go ahead, Mr. Beshore. Come on up.

10 CROSS-EXAMINATION

11 BY MR. BESHORE:

12 Q. Mr. Cottet?

13 A. Cottet, correct.

14 Q. Cottet.

15 Do I understand your concerns with respect to
16 the competitive effects of the proposal how it would --
17 your concern is how it would impact your sales of the
18 packaged product at the wholesale level?

19 A. Correct.

20 Q. What products are made at the Madisonville
21 plant?

22 A. Fluid milk product, juice drinks, all sizes,
23 gallons, half gallons, quarts, pints, half pints.

24 Q. You're not -- you didn't have any comments on
25 transportation credits. Is that because you're

1 satisfied with the way that that works?

2 A. Correct.

3 Q. Okay. I think I heard you say you'd like to
4 see point of sale rather than plant-point pricing?

5 A. Correct.

6 Q. Okay. But you understand the federal order
7 system has never worked that way?

8 A. Yes, I understand that. The point of sale
9 has worked that way in the over-order premiums, which
10 in some cases helps us. But what happens in these --
11 with the differentials being larger now than they were
12 before, now you're allowing milk to ship from another
13 part of the country into a shipping area that competes
14 directly with us.

15 The freight doesn't offset the difference in
16 the federal order, where prior to that, it used -- it
17 kind of was six and a half. It was very close. But
18 when you're shipping a product from Asheville, North
19 Carolina, now into Miami, with that differential change
20 sitting there, it creates a different price in any
21 competitive situation, I should say.

22 Q. With respect to the packaged milk?

23 A. I'm strictly talking packaged milk, correct.

24 MR. BESHORE: Okay. Thank you.

25 JUDGE HILLSON: Any other questions for

1 Mr. Cottet?

2 Mr. Smith, come on up.

3 CROSS-EXAMINATION

4 BY MR. SMITH:

5 Q. Hello, Mr. Cottet.

6 A. Hello.

7 Q. I'd like to ask the same question that I
8 asked of the representative of Kroger. If you could
9 walk through a little more detail what the translation
10 is cents per gallon of packaged milk and how the market
11 will move.

12 A. If we took -- I'll use Charleston, South
13 Carolina. We can use that as an example. It's a
14 dollar per hundredweight. It's roughly, in our
15 calculation, eight or nine cents a gallon on the price
16 per product.

17 If Florence, which is very close to
18 Charleston, South Carolina, ships in the same
19 competitive market, if that is a -- I forgot if it was
20 50 cent or 30 cents. If it's 50 cents, then it's --
21 they are going up four, so there is a price
22 differential of six cents a gallon sitting there,
23 approximately, that we have to now compete with. That
24 would directly impact with bids, government bids,
25 things like that.

1 We already have the freight which we had
2 before, which we have no problem with. But when you
3 take the raw milk price and you change that price to
4 make it uncompetitive -- you know, such as school bids,
5 we could no longer be competitive, because that's a
6 pretty large amount of a number on a product. And
7 that's the issue we have with it, is trying to remain
8 competitive in our prime areas where the differential
9 is different.

10 Q. So your primary concern is with school bid
11 prices?

12 A. That's an example. Governments are --

13 Q. I understand.

14 A. Yeah. Government bids or any bids of any
15 national chain require us to be very close on our
16 pricing. If we're not pricing from the same boat,
17 basically, on the milk, the same base, then we have an
18 issue.

19 Q. I'm not asking for proprietary information,
20 but there is theoretical argument, which is transparent
21 on its face, with how it actually translates to your
22 actual company.

23 A. Uh-huh (Indicates affirmatively), yes.

24 Q. Are government contracts a substantial
25 percentage of your basis as opposed to --

1 A. I would probably --

2 Q. -- private sales?

3 A. -- say 15 to 20 percent of our business,
4 generally speaking, give or take a few percentage
5 points, depending on the company. Some of our
6 companies have a much higher percentage of bids, school
7 bids, government bids, stuff like that than other
8 companies. But I would say 15 to 20 percent of our
9 business is government bids.

10 Q. And how about for your plants more in the
11 central part in Kentucky, as you get closer to the
12 margins of the orders, how is that market affected
13 where the amounts are less?

14 A. I believe London and Madisonville, we don't
15 have a major argument there. There is price
16 competitive differences with some of the companies that
17 we compete directly with on some of the, say, warehouse
18 customers we have. A penny or half a penny is a big
19 difference in the bid process. And if you have --
20 London, I believe -- if you go to Winchester, now
21 instead of -- correct me if I'm wrong on the numbers --
22 but I think it was a 20-cent difference, and now it's
23 moving to a 30 or 40-cent difference between those two
24 companies. If we're bidding on the same customers, it
25 creates a difference.

1 Q. In the half penny?

2 A. Right. I'm using -- half penny may not be
3 the accurate number, but I'm just -- it creates a
4 difference in bidding on the warehouse type customers.

5 Q. Do you have any comments on the provisions
6 for smoothing the amounts in terms of location that is
7 in the proposal? Have you had an opportunity --

8 A. I really have not had the opportunity.

9 Q. So your testimony is just straight off the
10 proposed increases in the differentials?

11 A. Correct.

12 MR. SMITH: Thank you.

13 JUDGE HILLSON: Mr. Rower?

14 CROSS-EXAMINATION

15 BY MR. ROWER:

16 Q. Mr. Cottet, does National Dairy Holdings
17 purchase milk exclusively from cooperatives?

18 A. No. We buy some independent milk.

19 Q. You buy some independent milk?

20 A. Yeah.

21 MR. ROWER: Okay. Thank you.

22 JUDGE HILLSON: Mr. English?

23 MR. ENGLISH: A quick recross, Your Honor.

24 REDIRECT EXAMINATION

25 BY MR. ENGLISH:

1 Q. In your experience, whether it's a government
2 contract or otherwise, isn't it the case that the
3 wholesale level contracts change what we call mil?

4 A. Correct.

5 Q. And what is a mil?

6 A. In most cases, it can be a penny a gallon.

7 Q. Or a tenth of a penny?

8 A. Or a tenth of a penny or half a penny. A
9 school bid can be decided on -- a \$10,000,000 school
10 bid can be decided on a thousand dollars in price. So,
11 I mean, it can be very minute when you get it down
12 there.

13 If you're competing against lower cost milk
14 coming into your milk order and you don't have that
15 benefit or the freight doesn't offset it coming down,
16 it creates a problem, enough of a problem, when you
17 look at the situation like Coburg, where you actually
18 can have a situation where the processor could have
19 financial problems keeping a viable company running in
20 that area.

21 MR. ENGLISH: That's all I have, Your Honor.

22 JUDGE HILLSON: Any further questions for
23 this witness?

24 Okay. Mr. Cottet, you may step down.

25 THE WITNESS: Thank you.

1 JUDGE HILLSON: Did you have another witness
2 you want to call, Mr. English?

3 MR. ENGLISH: No. I think the market
4 administrator has some data, and then was a
5 proposal for -- Mr. Kinser would prefer to go
6 tomorrow morning, Your Honor.

7 JUDGE HILLSON: You don't --

8 MR. ENGLISH: No. That's it. Mr. Kinser is
9 the only other witness that I have.

10 JUDGE HILLSON: Okay. No other witnesses
11 that you know of other than --

12 MR. ENGLISH: I don't -- no witnesses that
13 are either my clients or that have informed that
14 they wish to testify.

15 JUDGE HILLSON: I thought you said a woman
16 was here that was going to testify. I might have
17 misunderstood you.

18 MR. ENGLISH: No. I think -- I thought maybe
19 we were talking about the market administrator's
20 office. I apologize.

21 JUDGE HILLSON: Okay. Are you ready to
22 proceed?

23 MR. STEVENS: Yeah. Jason Nierman.

24 JUDGE HILLSON: You are already under oath,
25 so you can testify.

1 THE WITNESS: All right.

2 JUDGE HILLSON: Go ahead, Mr. Stevens.

3 JASON NIERMAN,
4 the witness herein, being sworn on oath prior, was
5 questioned and testified as follows:

6 EXAMINATION

7 BY MR. STEVENS:

8 Q. Jason, you were asked by, I guess,
9 Mr. English to prepare -- to look at your records and
10 to prepare some updates on some exhibits that you
11 previously entered into evidence.

12 A. Yes.

13 Q. And you've done that?

14 A. Yes.

15 Q. And you've brought copies of the results of
16 that work with you?

17 A. Yes, I have.

18 Q. And you had them in the back of the room, and
19 you distributed them around for people to use during
20 the hearing?

21 A. Yes.

22 MR. STEVENS: Okay. Your Honor, I'd like to
23 mark for identification the one-page document,
24 which, I guess, has the title, Total Diversions to
25 Plants Located Outside the Southeast and

1 Appalachian Marketing Areas.

2 JUDGE HILLSON: Okay. I'll mark this as
3 Exhibit 32.

4 BY MR. STEVENS:

5 Q. Okay. Now, as a preliminary matter, this was
6 prepared by you or pursuant to your supervision in the
7 office --

8 A. Yes.

9 Q. -- from official records of the Department of
10 Agriculture?

11 A. Yes.

12 Q. And, again, like the other documents, it's
13 not presented for or against any proposal?

14 A. No, it is not.

15 Q. You prepared this at the request of
16 Mr. English?

17 A. Yes.

18 Q. Okay. Could you briefly go over the document
19 and tell us what it contains?

20 A. For January 2004 to December of 2006 on a
21 monthly basis, it's the total diversions pooled on the
22 market. That's the first column. The second column is
23 the diversions that were delivered to plants located
24 outside of the Appalachian or Southeast marketing area.

25 Q. Okay. So maybe just give us an example of

1 what's on there. Monthly and then it has a couple
2 columns. What does it depict?

3 A. The first column would be the total
4 diversions pooled on the order, and then the second
5 column would be the portion of those total diversions
6 that were diverted to a plant located outside of the
7 two marketing areas.

8 Q. Okay. Anything else you'd like to say about
9 it?

10 A. No.

11 MR. STEVENS: We submit the exhibit, Your
12 Honor. I ask that it be marked for
13 identification.

14 JUDGE HILLSON: It's been marked.

15 Anyone have questions? Mr. English, you're
16 raising your hand.

17 MR. ENGLISH: Charles English for Dean Foods
18 Company and National Dairy Holdings.

19 CROSS-EXAMINATION

20 BY MR. ENGLISH:

21 Q. First, let me thank you for getting this
22 done. I know that being away from your area it was
23 difficult.

24 Do I understand that this is an update of an
25 exhibit that was presented at another hearing?

1 A. The second column was presented in the
2 hearing in January '06 -- through the date it was
3 presented, January '04 through, I believe, November
4 '05.

5 Q. Okay. And I made actually a number of
6 requests that went beyond this. And to the extent I
7 made those requests, your office was unable to do it
8 either because of confidentiality or simply logistics
9 because of the short time frame; is that correct?

10 A. That's correct.

11 Q. Okay. Let me just take the first line for
12 one moment.

13 If there were total diversions of 105,397,742
14 and diversions outside of the Appalachian and Southeast
15 marketing area 85,238,426, one could conclude that
16 there are 20,160,00 approximately million pounds of
17 milk that were diverted in Appalachia and Southeast
18 orders; is that correct?

19 A. That's correct.

20 MR. ENGLISH: That's all I have. Thank you.

21 JUDGE HILLSON: Does anyone have questions
22 of this witness?

23 MR. BESHORE: Yes.

24 JUDGE HILLSON: Mr. Beshore.

25 CROSS-EXAMINATION

1 BY MR. BESHORE:

2 Q. Mr. Nierman, are -- if pooled milk -- can
3 pooled milk be diverted to other order plants?

4 A. Yes.

5 Q. And would this include such diversions?

6 A. Yes.

7 Q. Are there such diversions?

8 A. Yes.

9 Q. And so that, for instance, there was -- are
10 there any counties in Indiana that are part of the
11 marketing order?

12 A. Yes.

13 Q. Okay. But if there were diversions to --
14 from Indiana sources to points north of the counties of
15 Indiana that are in your order, they would be -- and
16 even if they went to pooled plants in another order,
17 that would be considered diversions outside the area
18 for these purposes?

19 A. That's correct.

20 MR. BESHORE: Thank you.

21 JUDGE HILLSON: All right. Mr. Smith?

22 EXAMINATION

23 BY MR. SMITH:

24 Q. Dan Smith.

25 Can you explain for the three months, March,

1 April, and May '04 as compared to the equivalent
2 periods in the '05 and '06 profile, why there was such
3 a tremendous volume in the latter two years as compared
4 to the first year?

5 A. I believe due to price differences within the
6 classes, there was milk that was elected not to be
7 pooled in those three months.

8 Q. So that was the period of time of that market
9 development?

10 A. I believe so.

11 MR. SMITH: Okay. Thank you.

12 JUDGE HILLSON: Well, I'll receive exhibit 32
13 into evidence.

14 (Exhibit No. 32 received.)

15 JUDGE HILLSON: You may step down. Thank
16 you.

17 Do you have another witness?

18 MR. STEVENS: Steven Duprey.

19 JUDGE HILLSON: You're still sworn in.

20 I'm going to mark this as Exhibit 33.

21 Mr. Stevens, go right ahead whenever you're
22 ready.

23 STEVEN DUPREY,
24 the witness herein, being duly sworn prior, was
25 questioned and testified as follows:

EXAMINATION

1
2 BY MR. STEVENS:

3 Q. Steven, you were asked -- we conferred and
4 you prepared certain documents at the request of
5 Mr. English --

6 A. Correct.

7 Q. -- that you brought with you?

8 And do you have copies that you distributed
9 to the judge and the reporter and available for the
10 parties to use?

11 A. Correct.

12 MR. STEVENS: Your Honor, I'd like to mark
13 for identification as, I believe --

14 JUDGE HILLSON: Thirty-three.

15 MR. STEVENS: -- thirty-three. It's a
16 one-page document titled, Producer Milk Deliveries
17 Prepared for Dean Foods, 2004 through March 2007,
18 Federal Order 7, Southeast Marketing Area. It's a
19 one-page document.

20 Let me ask him about this.

21 JUDGE HILLSON: Uh-huh (Indicates
22 affirmatively).

23 BY MR. STEVENS:

24 Q. This was prepared by you pursuant to your
25 supervision?

1 A. Yes, it was.

2 Q. And from documents from the official records
3 of the United States Department of Agriculture?

4 A. Yes.

5 Q. And it's not presented for or against any of
6 the proposals?

7 A. No, it's not.

8 Q. You prepared it at the request of
9 Mr. English?

10 A. I did.

11 Q. Okay. Could you briefly go over the one-page
12 document, maybe describe what's in it the first column
13 or two to just describe what information is contained
14 in that document.

15 A. Sure. Essentially, it shows milk that was
16 pooled on Federal Order 7 that was delivered inside the
17 geographic area, marketing area, of the Southeast
18 order. That would be the third column. The fourth
19 column shows milk that was delivered to the outside
20 marketing area. And the last column is the total
21 producer milk that was pooled in that given month.

22 There is one footnote, milk that was
23 delivered inside the marketing area includes all milk
24 delivered to the pool plants, partially regulated
25 plants, and any other nonpool plant.

1 Q. So it's producer milk?

2 A. It's all producer milk, yes.

3 Q. And maybe go through a column or two and just
4 describe -- I see the year and the month, and that.
5 Why don't you describe a couple of the entries there.

6 A. For example, the first line is January 2004,
7 pooled on Order 7, delivered inside the Southeast
8 marketing area of 557,000,000 pounds. Delivered
9 outside the marketing area was 98,000,000 pounds for
10 the grand total producer milk pool during January 2004
11 to cover 655,000,000 pounds.

12 MR. STEVENS: Okay. We submit the exhibit,
13 Your Honor. It's been marked --

14 JUDGE HILLSON: It's been marked as 33.

15 MR. STEVENS: Thank you.

16 JUDGE HILLSON: Questions? Go ahead,
17 Mr. English.

18 MR. ENGLISH: Charles English for Dean Foods
19 and National Dairy Holdings.

20 CROSS-EXAMINATION

21 BY MR. ENGLISH:

22 Q. Thank you, again, Mr. Duprey, for getting
23 this done.

24 The column delivered inside Southeast
25 marketing area, that includes pooled diversions where

1 the milk, nonetheless, ends up in a plant located in
2 the Southeast, correct?

3 A. Yes.

4 Q. And then the second column, delivered outside
5 of the Southeast marketing area, that would be
6 diversions to plants outside -- in other words,
7 diversions to plants outside the Southeast marketing
8 area, correct?

9 A. Yes.

10 Q. So there is some element on this table -- and
11 maybe we'll figure it out somewhere else. But there
12 was some element on this table in column three, the
13 557,104,419 pounds for January of '04, there is some
14 element that you're unable to tell us today is
15 diversions within the marketing area?

16 A. Correct.

17 Q. Okay. And, of course, the diversions outside
18 the Southeast marketing area could, of course, include
19 diversions to any plants in Order 5 in your exhibit,
20 correct?

21 A. Correct.

22 MR. ENGLISH: Okay. That's all I have.

23 Thank you.

24 JUDGE HILLSON: Does anyone else have
25 questions of this exhibit?

1 Hearing none, I will receive Exhibit 33 into
2 evidence.

3 (Exhibit No. 33 received.)

4 JUDGE HILLSON: You may step down. Thanks
5 for coming back.

6 Mr. Stevens, I know the government has --
7 supposed to have witnesses for 5, 6, and 7,
8 Proposals 5, 6, and 7. I may be off by a number
9 there.

10 Are you ready for that tonight? If not, we
11 can do that tomorrow?

12 MR. STEVENS: Give me a minute and let me
13 look.

14 JUDGE HILLSON: 4, 5, and 6.

15 MR. STEVENS: 4, 5, and 6.

16 JUDGE HILLSON: I want to understand, you
17 just have -- Mr. Kinser is your only remaining
18 witness?

19 MR. ENGLISH: That's correct.

20 JUDGE HILLSON: He's not going to be on for a
21 huge length of time.

22 MR. ENGLISH: That's not my plan.

23 JUDGE HILLSON: Okay.

24 MR. ENGLISH: He doesn't have a 61-page
25 statement.

1 MR. STEVENS: We're ready to go on Proposal
2 4.

3 JUDGE HILLSON: Okay. Call your witness.

4 MR. STEVENS: Sue Mosley.

5 SUE MOSLEY,
6 the witness herein, being first duly sworn on oath, was
7 questioned and testified as follows:

8 JUDGE HILLSON: Please state your name and
9 spell it for the record.

10 THE WITNESS: My name is Sue Mosley,
11 M-o-s-l-e-y.

12 JUDGE HILLSON: Okay. This is your witness,
13 Mr. Stevens?

14 MR. STEVENS: Yes. We would like her
15 statement -- her testimony marked as Exhibit 34.

16 JUDGE HILLSON: Okay. So marked.

17 MR. STEVENS: And the witness will go ahead
18 and read the statement into the record, if that's
19 okay.

20 STATEMENT BY SUE MOSLEY

21 THE WITNESS: My name is Sue Mosley, and I am
22 the market administrator for the Florida order,
23 Federal Order 6, and the Southeast order, Federal
24 Order 7.

25 I have worked for the federal milk order

1 program for over 36 years and have been the market
2 administrator for 13 years. I have been the
3 market administrator for the current Florida order
4 and the current Southeast order since their
5 formation on January 1, 2000. I am here today to
6 testify in support of Proposal Nos. 5 and 6.

7 Proposals 5 and 6 would increase the maximum
8 administrative assessment rate for both the
9 Florida and Southeast orders provided for in
10 Section 7 CFR 1006.85 and 10074.85, from five
11 cents per hundredweight to eight cents per
12 hundredweight. Currently, the administrative
13 assessment for these orders is provided for in
14 7 CFR 1000.85.

15 The administrative assessment language in
16 Sections 1006.85 and 1007.85 simply point to
17 Section 1000.85. Proposals 5 and 6 would amend
18 Sections 1006.85 and 1007.85 to provide for all of
19 the administrative assessment language pertinent
20 to the Florida and Southeast orders and
21 discontinue the reference to Section 1000.85.
22 Under Proposals 5 and 6, the administrative
23 assessment would continue to apply to the same
24 milk as in the past.

25 It should be noted that if Proposals 5 and 6

1 were adopted, the eight cent per hundredweight
2 rate would be the maximum rate allowable, not
3 necessarily the actual rate charged. The actual
4 rate charged would only be as high as needed, as
5 determined by the market administrator, with
6 approval by the deputy administrator for dairy
7 programs, agricultural market services, United
8 States Department of Agriculture.

9 The increase in the maximum assessment rate
10 is necessary to ensure that the market
11 administrator has sufficient funds to carry out
12 the responsibilities for administration of the
13 orders. Administering order functions including
14 pooling, auditing, and providing market
15 information requires staff and financial
16 resources.

17 In addition, the market administrator is
18 required to maintain a specified level of
19 operating reserves. The level of the required
20 operating reserve is determined by a formula set
21 forth in MA Instruction 207 issued by the deputy
22 administrator for dairy programs.

23 The purpose of the reserve fund is to cover
24 the necessary costs of closing out an order, such
25 as completing pools and audits, paying severance

1 pay to employees, and terminating leases in the
2 event that an order is terminated. The market
3 administrator is primarily dependent on income
4 from the administrative assessment to fund the
5 operations of the orders.

6 This assessment, provided for in Section
7 1006.85 for the Florida order and Section 1007.85
8 for the Southeast order, through reference to
9 Section 1000.85, is collected each month on pooled
10 producer milk. The assessment is also collected
11 on certain types of other source receipts assigned
12 to Class 1 and certain route disposition in the
13 marketing area by partially regulated distributing
14 plants.

15 The vast majority of the administrative
16 assessment income is, however, from pooled
17 producer milk. Since 2000, the administrative
18 assessment for both orders has contributed over 80
19 percent of the total income of the market
20 administrator office.

21 In 2000, the first year of operation of the
22 consolidated orders, pooled producer milk on the
23 Florida order averaged 238.9 million pounds per
24 month and 623.9 million pounds on the Southeast
25 order, for a total monthly average of

1 approximately 862.8 million pounds.

2 In 2001, monthly average producer milk on the
3 Florida order was 231 million pounds and 647
4 million pounds on the Southeast order for a total
5 monthly average of approximately 878.4 million
6 pounds.

7 In 2002, monthly average producer milk on the
8 Florida order was 224.4 million pounds and 660.6
9 million pounds on the Southeast order, for a total
10 monthly average of 885 million pounds.

11 At a three cent per hundredweight assessment
12 rate for the Florida order and a 3.5 cent
13 assessment rate for the Southeast order, the
14 volumes of producer milk generated sufficient
15 revenue to fund the order operations and to
16 maintain the mandated reserve funds for these
17 years.

18 In 2003, while producer milk on the Florida
19 order increased by about five percent, producer
20 milk on the Southeast order, with a pool almost
21 2.5 times the size of the Florida order, decreased
22 11 percent. This resulted in a significant
23 decrease in the administrative assessment
24 collections and required the market administrator
25 to use operating reserves to cover expenses,

1 thereby dropping the reserve level to near the
2 mandated minimum.

3 On December 19, 2003, the market
4 administrator issued a notice to handlers in the
5 Florida order that, effective with January 2004
6 milk deliveries, the administrative assessment
7 rate would increase one cent to four cents per
8 hundredweight. The market administrator also
9 issued a notice to handlers in the Southeast order
10 with the same effective date increasing the
11 administrative assessment rate one cent to 4.5
12 cents per hundredweight.

13 In 2004, the producer milk on the Florida
14 order increased by about five percent over 2003,
15 and producer milk on the Southeast order rebounded
16 slightly, increasing about one percent.

17 In 2005, producer milk on the Florida order
18 increased about 8.8 percent over 2004, and the
19 producer milk on the Southeast order increased
20 five percent.

21 In 2006, producer milk on the Florida order
22 was approximately the same as 2005, and producer
23 milk on the Southeast order increased 6.8 percent
24 over 2005.

25 With the increase in producer milk in 2004,

1 2005, and 2006, in conjunction with the market
2 administrator's efforts to control costs, the
3 administrative assessment rates implemented in
4 2004 have been sufficient to cover expenses and to
5 build an adequate reserve level.

6 Control cost measures from 2000 to 2006 have
7 included a 15 percent reduction in staff through
8 attrition and a reduction in force in 2006,
9 increased use of technology to hold meetings and
10 conduct audits, a reduction in travel expenses,
11 and a decrease of almost 33 percent in
12 communication costs primarily due to a change in
13 long distance carriers.

14 The market administrator will continue to
15 take measures to hold down costs while meeting
16 regulatory responsibilities and maintaining a high
17 quality of service.

18 While the market administrator is not
19 currently charging the maximum assessment rate,
20 Proposal No. 2 seeks to limit by an average of
21 12.3 percent allowable diversions for the
22 Southeast order.

23 If adopted, this proposal would likely reduce
24 the producer milk on the Southeast order, thereby
25 reducing the value of the administrative

1 assessments used to fund order operations.

2 A decision effective in December 2006 also
3 limits the ability of handlers to divert milk by
4 reducing the allowable diversions by the volume of
5 transportation credit claims.

6 In addition, the long-term downward trend in
7 milk production for the southeastern United States
8 and marketing decisions of handlers present an
9 increased potential for variability in the market
10 administrator's revenue stream.

11 This regional hearing officers an opportunity
12 to increase the maximum administrative assessment
13 rate for the Florida and Southeast orders to
14 provide the market administrator with the
15 flexibility to set the appropriate administrative
16 assessment rate needed to effectively administer
17 order operations and to maintain the required
18 operating reserves.

19 Again, I would like to reiterate that these
20 proposals are to increase the maximum
21 administrative assessment rate to eight cents per
22 hundredweight.

23 This is not necessarily the rate that would
24 be charged. As always, the actual rate charged
25 would only be as high as needed to cover expenses

1 and to maintain the mandated reserve level, as
2 determined by the market administrator with
3 approval by the deputy administrator for dairy
4 programs, agricultural marketing services, USDA.

5 This concludes my testimony.

6 DIRECT EXAMINATION

7 BY MR. STEVENS:

8 Q. Now, let me ask you, If you deviated from the
9 written testimony here by reversing a word or two or
10 misstating part of it, do you want the record to
11 reflect your statement as submitted?

12 A. As written, yes.

13 Q. As written?

14 A. Yes, as written.

15 MR. STEVENS: With that, we offer the -- it
16 having been marked, we offer the witness for
17 cross-examination.

18 JUDGE HILLSON: Does anyone have any
19 questions of this witness?

20 I will receive Exhibit 34 into evidence.

21 (Exhibit No. 34 received.)

22 JUDGE HILLSON: Ms. Mosley, you may step
23 down. Thank you very much.

24 Mr. Stevens, is there another witness, or is
25 that it?

1 MR. STEVENS: Can we have a minute?

2 JUDGE HILLSON: Okay. Let's go off the
3 record.

4 (Brief recess was taken.)

5 JUDGE HILLSON: Let's go back on the record.

6 MR. STEVENS: Jeff Gooch.

7 JEFF GOOCH,
8 the witness herein, being first duly sworn on oath, was
9 questioned and testified as follows:

10 JUDGE HILLSON: Okay. State and spell your
11 name for the record, please.

12 THE WITNESS: Jeff Gooch, G-o-o-c-h.

13 JUDGE HILLSON: Your witness, Mr. Stevens.

14 DIRECT EXAMINATION

15 BY MR. STEVENS:

16 Q. All right. Mr. Gooch, you prepared some
17 testimony for the hearing today?

18 A. Yes.

19 Q. You brought copies of that with you and
20 distributed them to the judge and the reporter and
21 various people in the hearing and conference room?

22 A. Yes.

23 Q. Let me ask you as a preliminary matter: Your
24 testimony is based on material that you prepared or
25 prepared at your office and reviewed by your

1 supervisors?

2 A. Yes.

3 Q. And it's from your official records there at
4 the department that you keep in Louisville?

5 A. That's correct.

6 Q. It's not offered for or against any
7 proposals, except your proposal, right?

8 A. Correct.

9 Q. With that, could you read your statement into
10 the record, please.

11 STATEMENT BY JEFF GOOCH

12 THE WITNESS: My name is Jeff Gooch, and I am
13 the assistant market administrator for the
14 Appalachian federal order, Federal Order No. 5.

15 I have worked for the federal milk order
16 program for nearly 23 years and have been the
17 assistant market administrator for the Appalachian
18 federal order, Federal Order No. 5, since January
19 2006.

20 Prior to being appointed assistant market
21 administrator, I was an assistant to the market
22 administrator for 11 years. I am here today to
23 testify in support of Proposal No. 4.

24 Proposal No. 4 would increase the maximum
25 administrative assessment rate for the Appalachian

1 federal record, Federal Order No. 5, provided for
2 in Section 1005.85, from five cents per
3 hundredweight to eight cents per hundredweight.
4 Currently, the administrative assessment for the
5 Appalachian order is provided for in section
6 1000.85.

7 The administrative assessment language in
8 Section 1005.85 simply points to Section 1000.85.

9 Proposal No. 4 would amend Section 1005.85 to
10 provide all of the administrative assessment
11 language pertinent to this order and discontinue
12 the reference to Section 1000.85.

13 Under Proposal No. 4, the administrative
14 assessment would continue to apply to the same
15 milk as in the past. It should be noted that if
16 Proposal No. 4 were adopted, the eight cent per
17 hundredweight rate would be the maximum rate
18 allowable, not necessarily the actual rate
19 assessed.

20 The actual rate assessed would only be as
21 high as needed, as determined by the market
22 administrator with approval by deputy
23 administrator for dairy programs, agricultural
24 marketing Service, United States Department of
25 Agriculture.

1 The increase in the maximum administrative
2 assessment rate is necessary to ensure that the
3 market administrator has sufficient funds to carry
4 out the responsibilities for administration of the
5 federal order. Administering order functions
6 include administrative, accounting, human
7 resource, economic, pooling, and auditing staffs.

8 In addition, the market administrator is
9 required to maintain a specified level of
10 operating reserves. The level of the required
11 operating reserve is determined by a formula set
12 forth in MA Instruction 207 issued by the deputy
13 administrator for dairy programs.

14 The purpose of the operating reserve is to
15 cover the necessary costs of closing out an order,
16 completing pools and audits, paying severance pay
17 to employees, terminating leases, etc., in the
18 event that an order is terminated.

19 The market administrator is primarily
20 dependent on revenue from administrative
21 assessments to fund the operations of the order.
22 The administrative assessment, provided for in
23 Section 1005.85, through reference to Section
24 1000.85, is collected each month on pooled
25 producer milk.

1 The assessment is also collected on certain
2 types of other source receipts assigned to Class 1
3 and certain route disposition in the marketing
4 area by partially regulated distributing plants.

5 The vast majority of the administrative
6 assessment revenue is from pooled producer milk.
7 The current administrative assessment rate is four
8 cents per hundredweight of milk with a maximum cap
9 of five cents per hundredweight. This
10 administrative assessment rate has remained
11 unchanged since January 2000.

12 For the years ending 2000, 2001, and 2002,
13 producer milk pooled on the order averaged about
14 547 million pounds monthly. At the four cents per
15 hundredweight assessment rate in effect throughout
16 this period, these volumes of producer milk
17 generated sufficient revenue to fund the
18 Appalachian order operations and maintain the
19 mandated operating reserve.

20 For the years ending in 2003, 2004, and 2005,
21 producer milk pooled on the order averaged 525
22 million pounds month.

23 For the year ending in 2006, producer milk
24 pooled on the order averaged 520 million pounds
25 monthly.

1 When comparing the first four months of 2007
2 to the first four months of 2006, producer milk
3 pooled on the Appalachian order is down 3.45
4 percent.

5 The southeast United States continues to
6 experience losses in milk production. This
7 situation of declining volumes of milk pooled and
8 the difficulty in predicting producer milk volumes
9 in the future endangers the market administrator's
10 ability to carry out order operations while
11 maintaining a legally mandated operating reserve.
12 The Appalachian federal order was in an operating
13 deficit position in 2003, 2004, and 2006.

14 In 2005, the order had a balanced budget. At
15 the four cent per hundredweight assessment rate in
16 effect throughout this period, 2003 through 2006,
17 these volumes of producer milk did not generate
18 sufficient revenue to fund the Appalachian order
19 operations, thus lowering the level of the
20 mandated operation reserve.

21 It should also be noted that an interim final
22 rule effective December 1, 2006, established a
23 zero diversion limit standard on eligible Class 1
24 milk receiving transportation credits in the
25 Appalachian order.

1 Specifically, that decision limits the amount
2 of milk that may be pooled on the Appalachian
3 order, thus reducing the amount of the
4 administrative assessment revenue throughout the
5 period of July through December on these volumes
6 of producer milk generated.

7 If Proposal No. 1 is adopted, the
8 transportation credit payout months would include
9 January and February, further reducing the amount
10 of milk that may be pooled on the Appalachian
11 order.

12 Proposal No. 1 would also reduce the volume
13 of milk which may be pooled by diversion on the
14 Appalachian order. This action would further
15 reduce the amount of administrative assessment
16 revenue.

17 The proposed tightening of pooling provisions
18 on the Appalachian order impacts the amount of
19 producer milk pooled on the order. While the
20 market administrator's office strives to control
21 costs and become more efficient in carrying out
22 its work, the efficiency gains cannot compensate
23 for further reducing the amount of revenue derived
24 from reducing milk volumes pooled on the market.

25 The market administrator's office makes every

1 effort to improve the operating efficiency and
2 effectiveness of this order -- the order. Actions
3 taken to control expenses include reducing the
4 size of the office statute by 29 percent through
5 attrition since 2003, contracting with outside
6 computer services, negotiating a
7 telecommunications contract, consolidating a field
8 office, and reducing travel to conferences and
9 meetings.

10 Advancements in information technology
11 systems are allowing the exchange of handler
12 information, thus reducing travel and mail
13 expenses.

14 About \$215,000 in administrative assessment
15 income is needed per at to cover basic operating
16 expenses. And a four cent per hundredweight
17 assessment rate, this equates to about 538 million
18 pounds of producer milk needed monthly to cover
19 expenses.

20 This hearing offers an opportunity to
21 increase the maximum assessment rate to eight
22 cents per hundredweight to assist the market
23 administrator in administering order functions and
24 maintaining the required operating reserves.

25 Again, it should be emphasized that the eight

1 cents per hundredweight rate would be the maximum
2 rate allowable, not necessarily the rate assessed.

3 As always, the actual rate assessed would
4 only be as high as needed, as determined by the
5 market administrator, with approval by the deputy
6 administrator for dairy programs, agricultural
7 marketing service, USDA.

8 This concluded my testimony.

9 CONTINUED DIRECT EXAMINATION

10 BY MR. STEVENS:

11 Q. To the extent that you've deviated from the
12 statement in any regard in your testimony, you want the
13 statement as written to be entered into the record; is
14 that correct?

15 A. Yes.

16 JUDGE HILLSON: I'm going mark this as
17 Exhibit 35, by the way, so --

18 MR. STEVENS: Thank you. We submit the
19 witness, Your Honor.

20 JUDGE HILLSON: Anyone have any questions of
21 this witness? There is no indication.

22 I will receive the Exhibit 35 into evidence.

23 (Exhibit No. 35 received.)

24 JUDGE HILLSON: And, Mr. Gooch, thank you for
25 testifying. You may step down.

1 Is that it for today? You don't no have any
2 more witnesses, do you?

3 MR. STEVENS: I do not, Your Honor.

4 JUDGE HILLSON: And tomorrow at this point we
5 have one witness scheduled, and that's it. Unless
6 some other producers show up, that will be it.

7 Okay. It's 5:10. I'm going to adjourn the
8 hearing until 8:30 tomorrow morning.

9 (Hearing was adjourned at 5:12 p.m.)
