STATE OF CALIFORNIA  
DEPARTMENT OF FOOD AND AGRICULTURE

PUBLIC HEARING  
TO CONSIDER AMENDMENTS  
TO THE STABILIZATION AND MARKETING PLANS  
FOR MARKET MILK FOR THE  
NORTHERN AND SOUTHERN CALIFORNIA  
MARKETING AREAS

CALIFORNIA DEPARTMENT OF FOOD AND AGRICULTURE  
AUDITORIUM  
1220 N STREET  
SACRAMENTO, CALIFORNIA

THURSDAY, JUNE 30, 2011  
9:00 A.M.

ACCELERATED BUSINESS GROUP

(916) 851-5976

1           Mr. Hearing Officer, this concludes my  
2 testimony.

3           HEARING OFFICER MAXIE: Thank you. Are there  
4 -- are there any questions of the witness before she  
5 escapes us?

6           (No audible response.)

7           HEARING OFFICER MAXIE: Hearing none, thank  
8 you very much.

9           MS. RANKIN: Thank you.

10          HEARING OFFICER MAXIE: At this time I'd like  
11 to call the first Petitioner, California Dairies  
12 Incorporated. Petitioner will have 45 minutes to  
13 submit testimony. You will notice that we have a time  
14 clock, again to my right, to help you time your  
15 testimony.

16          Thank you, sir. Thank you. For the record  
17 would you state your full name and spell your last  
18 name.

19          DR. ERBA: My name is Eric Matthew Erba.  
20 Last name's spelled E-R-B-A.

21          HEARING OFFICER MAXIE: You distributed a  
22 document to us. Is that a copy of your written  
23 testimony for this morning?

24          DR. ERBA: Yes, it is.

25          HEARING OFFICER MAXIE: Would you like that

1 document entered as a hearing exhibit?

2 DR. ERBA: Yes, I would. Thank you.

3 HEARING OFFICER MAXIE: All right. The  
4 exhibit will be entered as Exhibit number 49.

5 (Thereupon, Exhibit 49  
6 was received and entered into evidence.)

7 Whereupon,

8 DR. ERIC MATTHEW ERBA

9 was sworn and duly testified as follows:

10 DR. ERBA: Good morning Mr. Hearing Officer  
11 and members of the panel. My name is Eric Erba. I  
12 hold the position of Senior Vice President of  
13 Administrative Affairs for California Dairies, Inc.,  
14 whom I am representing here today.

15 California Dairies is a full-service milk  
16 processing cooperative owned by approximately 450  
17 producer-members located throughout the State of  
18 California. They collectively produce almost 17-  
19 billion pounds of milk per year, or 42 percent of the  
20 milk produced in California. Our producer-members have  
21 invested of \$500-million in large processing plants at  
22 six locations, which are projected to produce about  
23 350-million pounds of butter and 725-million pounds of  
24 powdered milk products in 2011.

25 On June 23rd, 2011, the Board of Directors

1 for California Dairies unanimously approved the  
2 position that I will be presenting here today.

3 We thank the Department for calling this  
4 hearing and allowing us the opportunity to explain our  
5 proposal and the reasons for submitting the petition  
6 for the hearing. The testimony that I will present  
7 today will be consistent with the idea of maintaining  
8 current plant capacity in California by adjusting the  
9 manufacturing cost allowances appropriately.

10 We recognize that many of the factors that  
11 companies consider before investing in new facilities  
12 or expanding current facilities will not be influenced  
13 by the Department's decision. However, the results of  
14 this hearing do determination whether or not plan  
15 margins are adequate to ensure each plant's continued  
16 operation. The California dairy industry is not far  
17 removed from a critical tipping point where milk  
18 production outpaces processing capacity. While we have  
19 not reached the crisis that we experienced in 2008, we  
20 do see pockets of imbalance. Since the spring of this  
21 year we have verified with processing facilities  
22 outside of California that some California milk is, in  
23 fact, moving out of California to other states for  
24 processing. It seems clear that California cannot  
25 afford to lose any more of its processing capacity.

1           For decades California has established  
2 minimum milk prices through the use of end product  
3 pricing formulas. End product pricing formulas depend  
4 on a variety of factors including established  
5 manufacturing cost allowances. The Department has long  
6 held that those manufacturing cost allowances need to  
7 be representative of verified processing costs  
8 incurrent by California processing plants. Fortunately,  
9 the Department has conducted cost studies of California  
10 manufacturing plants for years, and the published  
11 studies allow for regular review and discussion of  
12 manufacturing costs by the industry. More recently,  
13 the Department has collected and published information  
14 on the prices actually received by cheddar cheese  
15 manufacturers and butter manufacturers in California so  
16 that a comparison to the average prices at the Chicago  
17 Mercantile Exchange can be made. The results of these  
18 comparisons are manifested in the pricing formulas as  
19 f.o.b. price adjusters. We fully support the regular  
20 review and updating of cheese and butter f.o.b. price  
21 adjusters based on the most current information  
22 available.

23           The latest cost studies conducted by the  
24 Department were released in November 2010 and they  
25 indicate that adjustments are warranted and justified

1 for the manufacturing cost allowances and f.o.b. price  
2 adjusters. That is to say they do not continue to  
3 reflect the current marketing conditions in  
4 California's dairy manufacturing sector. As you are  
5 aware, the manufacturing cost allowance and f.o.b.  
6 price adjusters for Class 4A have not been adjusted  
7 since December of 2007 and the amendments to the  
8 pricing formulas according to the record that time were  
9 based on data from, 2006, and the early part of 2007.

10 The proposed Class 4A pricing formula:  
11 California Dairies proposed that the following formula  
12 for Class 4A milk be adopted.

13 On the Fat price the CME AA butter price,  
14 minus 4.85 cents for the f.o.b. price adjuster, minus  
15 11 -- or it should be 18.11 cents for the manufacturing  
16 cost allowance, multiplied by a yield factor of 1.2.  
17 On the Solids-Not-Fats side a California weighted  
18 average nonfat dried milk price less the manufacturing  
19 cost allowance of 19.84 cents multiplied by a yield  
20 factor of one.

21 The proposal simply amends the Class 4A  
22 pricing formula to increase -- by increasing the butter  
23 and nonfat dry milk manufacturing cost allowance to the  
24 weighted average cost for both commodities, as  
25 published in the November 2010 Manufacturing Cost

1 Exhibit. The Department's data verified that the cost  
2 of manufacture butter is 18.11 cents per pound, and  
3 increase of 2.51 cents per pound over the current  
4 manufacturing cost allowance for butter. Similarly,  
5 the cost exhibit verifies that the cost to produce  
6 nonfat dry milk is 19.84 cents per pound, an increase  
7 of 2.86 per pound over the current manufacturing cost  
8 allowance for nonfat dry milk.

9 California Dairies' plants handle large  
10 volumes of milk and are well managed and operate  
11 efficiently. More importantly, all of our plants  
12 operate every day because of our commitment and  
13 responsibility to balance most of the state's milk  
14 supply We make our proposal with full understanding  
15 that our proposed manufacturing cost allowances will  
16 leave some of our manufacturing plants uncovered.  
17 However, we think it is appropriate that the  
18 manufacturing cost allowance be set so that our largest  
19 and most efficient plants are covered. It is axiomatic  
20 that establishing manufacturing cost allowance that do  
21 not cover the costs incurred by the largest and most  
22 efficient plants has grave ramifications for processing  
23 capacity in the state.

24 To be consistent with past practices, the  
25 Department should also consider adjustments to the

1 f.o.b. price adjuster for butter at the same time that  
2 it is considering changes to the manufacturing cost  
3 allowances contained in the Class 4A pricing formula.  
4 The Department's data shows that the difference is 4.85  
5 cents per pound for the 24-month period ended June  
6 2010, an increase of 1.76 per pound over the current  
7 f.o.b. price adjuster. The Department has a long  
8 history of using the results of a 24-month of pricing  
9 data collected, published every year, and the  
10 Department itself has stated that the method for a  
11 recent 24-month period provides the most objective  
12 information available on California cheddar cheese and  
13 Grade AA butter sales.

14           Changes in the Class 4A manufacturing cost  
15 allowances that do not allow the results of the  
16 Department's -- do not follow the results of the  
17 Department's cost studies, that is to say increasing  
18 them by less than what is justified, reduces the value  
19 of the investment in milk processing facilities made by  
20 our member-owners. It would also differentially  
21 benefit those producers in California who do not have  
22 investments in butter and nonfat dry milk processing  
23 facilities and, therefore, carry no responsibility of  
24 costs in balancing and stabilizing the state's enormous  
25 milk supply.

1           On the percent of volume covered, prior panel  
2 reports have typically references the volume of product  
3 in the cost studies that would have been covered at a  
4 given level of manufacturing cost allowance. The  
5 Department has repeatedly stated in its panel reports  
6 that the level of volume covered is not predetermined  
7 and has attempted to choose manufacturing cost  
8 allowances such that 50 to 80 percent of cost study  
9 product volume is covered. Reporting the percentage of  
10 volume covered is not at issue here today. However,  
11 selecting manufacturing cost allowances using a  
12 percentage of volume covered as a guiding principle is  
13 at issue because the process is problematic, in part  
14 because of small number of plants involved in the cost  
15 studies.

16           Using the percent of volume covered as a  
17 guideline, even one as loose the Department has used in  
18 the past, has a built-in circularity to it. Let me  
19 provide you with an example. Say initially that the  
20 manufacturing cost allowance is set to cover 70 percent  
21 of the volume of product produced. In subsequent cost  
22 studies the plants that were less efficient and had  
23 higher costs may have exited the business, leaving only  
24 those plants that were considered to be the most  
25 efficient plants in the study. If the percent of

1 volume covered guideline is applied to this group in  
2 subsequent cost studies, a plant -- a plant once  
3 considered to be efficient will then be deemed to be a  
4 higher cost plant or cost inefficient. This result is  
5 simply because the percent of volume covered guideline,  
6 by construct, draws a line under which some of the  
7 plants will necessarily have to fall.

8           The obvious question is, what then should the  
9 Department consider as an alternative to the volume  
10 covered rule of thumb. Eliminating the percent of  
11 volume covered guideline will shift a great deal of  
12 responsibility to the Department's staff for knowing  
13 intimately the plants in the cost study. If the higher  
14 cost plants in the cost study do, in fact, drop out and  
15 there are only efficient plants left, which can be  
16 verified by Department staff, then setting the  
17 manufacturing cost allowance to cover all of the  
18 volume, or most of it, would be an acceptable and  
19 correct decision, and far preferred to blindly striking  
20 a line at 60 percent, or 70 percent, or 80 percent of  
21 the volume covered. Consequently, the panel should  
22 give serious consideration to eliminating the percent  
23 of volume covered guideline as a criteria to be used in  
24 the decision-making process.

25           Other proposals that are under consideration:

1 administrative amendments by CDFA. The Department  
2 submitted an alternative proposal for administrative  
3 changes to the Class 4A and Class 4B pricing formulas.  
4 The intent is to include language to implement the  
5 collection of securing charges provided by the Milk  
6 Products Security Trust Fund and to eliminate the  
7 conflicting language contained in the Stabilization and  
8 Marketing Plans relative to the Food and Agricultural  
9 Code. We recognize the need to keep regulations  
10 aligned with state laws and support those changes  
11 needed to maintain that consistency.

12           On the Class 4B proposals, manufacturing cost  
13 allowance and f.o.b. price adjuster, Land O'Lakes  
14 submitted a proposal to adjust the manufacturing cost  
15 allowance for cheese and the f.o.b. price adjuster for  
16 cheese in accord with the Department's cost studies  
17 that were released in November of 2010. We note that  
18 the approach used by Land O'Lakes in their proposal  
19 mirrors what California Dairies has proposed for the  
20 Class A formula. The method of relying on the  
21 Department's cost studies to update the pricing  
22 formulas is understandable, reasonable, and  
23 justifiable, and we support those changes to the Class  
24 4B pricing formula.

25           Class 4B proposals, whey factor: It should

1 be clear that the fixed factor of 25 cents per  
2 hundredweight to represent the value of whey in the  
3 Class 4B pricing formula was never intended to be  
4 permanent. The fixed factor was not a proposal from  
5 the dairy industry; it was a placeholder set in place  
6 by the Department to give the industry the time and  
7 opportunity to work out a mutually agreeable solution.  
8 A solution was not arrived at by the industry despite  
9 the considerable time and effort put forth by the  
10 Department and many key representatives of the dairy  
11 industry. Consequently, as the market price for dry  
12 whey has increased, California producers have seen the  
13 spread between the prices generated by the Class 4B and  
14 federal Class III pricing formulas grow over the past  
15 two years, largely the result of the difference in the  
16 manner in which whey is valued. I personally  
17 participated in several discussions that began months  
18 that favored a sliding scale for the whey contribution  
19 to the Class 4B formula. The mechanism is easily  
20 understood. When the market price for whey increases,  
21 the contribution to the Class 4B formula increases as  
22 well. I point out that there are proposals from both  
23 producer representatives and processor representatives  
24 under consideration that follow this exact same sliding  
25 scale concept.

1           We recognize that cheese processors of all  
2 sizes would be impacted by all the proposals that have  
3 been submitted to the Department. The Alliance of  
4 Western Milk Products, of whom California Dairies is a  
5 member, attempted to introduce a concept of dry whey  
6 credit for smaller cheese plans in 2007, but the  
7 Department steadfastly refused to accept the concept,  
8 citing lack of authorities in the Food and Agriculture  
9 Code. We remain convinced that no specific  
10 authorization is required to implement and administer a  
11 dry whey credit for smaller cheese plants. Both the  
12 Stabilization and Marketing Act and the Milk Pooling  
13 Act give the Secretary broad discretion regarding  
14 pricing and related matters. The Acts are intended as  
15 broad policy guidelines and not every detail as to how  
16 to administer the dairy programs must be spelled out in  
17 the Food and Agricultural Code.

18           It is unfortunate that no resolution to this  
19 general disagreement on Departmental authority has  
20 surfaced. However, the issue of the whey contribution  
21 to the Class 4B pricing formula and the subsequent  
22 value to produce as a whole cannot be ignored any  
23 longer.

24           Therefore, we support the Land O'Lakes  
25 proposal on the sliding scale for the whey factor in

1 the Class 4B formula.

2           Concluding remarks: As the largest supplier  
3 of milk to California dairy processing plants,  
4 California Dairies balances milk on a daily basis. Any  
5 change in our producer-owners' milk production or in  
6 our customers' orders must be accommodated by using the  
7 capacity in our plants 24 hours a day, seven days a  
8 week, and 365 days a year. We also help to balance  
9 milk supplies for other cooperatives and other  
10 processing plants on nearly a daily basis.

11           It is critical that the Department's decision  
12 maintain standby balancing capacity in California,  
13 particularly when we, as an industry, are looking at  
14 relatively stagnant plant processing capacities in the  
15 near future. To do so, the Department must follow its  
16 own cost studies and make the adjustment to the  
17 manufacturing cost allowances and f.o.b. prices  
18 adjusters whenever the data are available. California  
19 Dairies' proposal does just that for the Class 4A  
20 formula, and we support the same method being applied  
21 to the Class 4B formula as proposed by Land O'Lakes.  
22 We also support the Land O'Lakes proposal of using a  
23 sliding scale to value whey in the Class 4B pricing  
24 formula as a replacement for the fixed factor that  
25 exists currently.

1           Thank you for your attention. I'm happy to  
2 answer any questions that you may have. I request the  
3 opportunity to file a post-hearing brief.

4           HEARING OFFICER MAXIE: Thank you, Dr. Erba.  
5 Your request for a post-hearing brief is granted.

6           Are there any questions from the panel?

7           MS. GATES: Dr. Erba, on page one of your  
8 testimony you speak to the California dairy industry is  
9 not far removed from a critical tipping point where  
10 milk production is outpacing the processing capacity.  
11 And you speak to -- that you verified that with  
12 processing facilities outside California. Do you know  
13 what volume of milk we're moving at this point out?

14           DR. ERBA: Well, it's variable. I think you  
15 can understand that and it's going to probably go down  
16 as the future months come. I can get the actual  
17 numbers for you in a post-hearing brief if you wish,  
18 but it's probably on the order of a million pounds a  
19 day at its peak.

20           MS. GATES: Okay. Yeah, I'd appreciate that,  
21 thank you.

22           Kind of speaking to that issue, compared to  
23 2007, you know, at that time when we had the hearing  
24 there were certain landscapes that the dairy industry  
25 looked at at that time with regards to production,

1 plant capacity, milk movement. You know, at that point  
2 in time we had -- we were short on plant capacity,  
3 production was high. What do we see different today or  
4 is everything the same? It's kind of speaking to that  
5 same issue.

6 DR. ERBA: Well, I don't think that much has  
7 changed, Ms. Gates. We took a little bit of a downturn  
8 in production over the last couple of years but, if you  
9 look at milk production in the last 12 months in  
10 California, especially the last few months, it's been a  
11 very strong increase. Cow numbers are up. We really  
12 didn't go down that far in milk production in the last  
13 couple of years compared with what the capacity is.  
14 We're continuing in danger of losing processing  
15 capacity in the state and part of that is going to be  
16 supported by the manufacturing cost allowance and where  
17 that -- where that level is set. So even though we're  
18 maybe not at the danger zone where we were a couple  
19 years ago, we're really not that far removed.

20 And I think the example that I provided of  
21 milk moving out-of-state verifies that we are, we're  
22 already close. And spring has already passed, we're  
23 into hot weather now, we should be in okay shape  
24 through the rest of the year. The hard fact that we  
25 had milk in California moving out-of-state to get

1 processed this year indicates that we are close to that  
2 tipping point again.

3 MS. GATES: What percentage of capacity is  
4 CDI at at this point? Are you guys at capacity,  
5 processing at capacity?

6 DR. ERBA: Capacity's kind of a funny  
7 question. We've discussed this quite a bit internally.  
8 It's you don't receive milk continually on the same  
9 uniform volume every day, day end and day out. You  
10 have peaks and valleys. You may be under capacity  
11 during the week and over capacity on the weekends. So,  
12 I mean, overall we probably have a little bit of room  
13 right now but again it's peaks and valleys. We're one  
14 breakdown away from a plant on our customer, our own  
15 plants, affecting a fairly major crisis. We're that  
16 tight.

17 MS. GATES: Okay. CDI has significant year-  
18 end payouts -- was retained to the end of 2010. How  
19 did that affect the Board's decision to call for an  
20 adjustment to the pricing formulas?

21 DR. ERBA: I don't think it was related at  
22 all. We looked at the historical information provided  
23 by the Department of the cost studies. It is a pretty  
24 well held belief that we should have these kinds of  
25 hearings on a regular basis. As soon as the cost

1 studies come out, a hearing ought to be called to  
2 discuss it. And it could be an adjustment up, it could  
3 be an adjustment down. The fact that we haven't had a  
4 hearing to address this for several years, to me  
5 personally, is a little bit alarming because the  
6 numbers have gotten quite a ways away from the cost of  
7 where they are today, quite a ways away from what the  
8 manufacturing -- our cost allowances are in the  
9 formula.

10 So I don't think they're related at all. I  
11 think it's always been in my mind that we should have  
12 had this hearing, despite how well or how poorly we did  
13 as a company.

14 MS. GATES: Thank you.

15 MS. REED: Okay, I have a couple of questions  
16 for you and this is going to be more related to the --  
17 your costs, manufacturing costs, since you talk about  
18 that quite a bit.

19 How do you feel that your startup expenses  
20 and lower production have impacted the cost for your  
21 plants?

22 DR. ERBA: Well, there's going to be some of  
23 that, to be sure. Startup costs, we had some of that  
24 with our first plant in Visalia. Had less of it in the  
25 second plant because we had some experience of how that

1 equipment was going to run. But those costs are going  
2 to be there, the volumes are going to be lower, and  
3 eventually those are going to wash out over time.

4 Those plants started up in -- one started in  
5 2008 and one started in 2009. So at some point those  
6 will wash out of the costs as we perfect how those  
7 plants are running.

8 MS. REED: Okay. So basically -- I was going  
9 to ask you another question, but I guess that sort of  
10 answers this. Basically when you feel that those  
11 plants have reached full production, full capacity or  
12 whatever, that will then wash out and basically lower  
13 your costs is what you're saying. They will become  
14 more even.

15 DR. ERBA: Right, right. But I do point out  
16 that both those plants were very expensive to build,  
17 much higher costs than any of our other plants by a  
18 huge margin. And, no matter what, the depreciation  
19 costs, the interest cost, because of the higher cost of  
20 building it, that's going to be in there no matter  
21 what. You're not going to be able to wash those out.

22 MS. REED: Exactly. And that -- yeah, it's  
23 because those would affect a couple of areas within the  
24 cost study --

25 DR. ERBA: Right.

1 MS. REED: -- but not all of the areas that  
2 are being affected at this point.

3 DR. ERBA: Right. I would expect that some  
4 of those costs would come down over time, but I would  
5 not expect those to be huge numbers. Those costs were  
6 expensive, those plants were expensive to build and  
7 those costs are embedded in there.

8 MS. REED: Right, and I agree with that. I  
9 think that, you know, you're right that the costs will  
10 be there but I think as the production increases then  
11 that's what will sort of wash those out and make it  
12 more, you know, more uniform.

13 DR. ERBA: Sure. And we've already seen that  
14 in the first of the two Visalia plants.

15 MS. REED: Exactly, yes. Okay. Also just  
16 one final question. How do you feel that the costs in  
17 the Department's 2009 exhibit represent the costs for  
18 your plants?

19 DR. ERBA: Well, seeing as we make up most of  
20 the plants in the study anyway, I would say they're  
21 very representative.

22 MS. REED: Okay, yeah. They're  
23 representative but you have to take into consideration  
24 there are others also, so it's not going to be an exact  
25 number but --

1 DR. ERBA: That's true.

2 MS. REED: -- you think it's falling in the  
3 ballpark for where -- the weight of that, which is  
4 falling in the ballpark, you're thinking.

5 DR. ERBA: Right. And the plants that we  
6 have in the cost of these, we've got plants that are  
7 above the weighted average and below the weighted  
8 average.

9 MS. REED: Okay, thank you.

10 HEARING OFFICER MAXIE: Mr. Eastman?

11 MR. EASTMAN: Yes, I have a couple of  
12 questions for you, Dr. Erba.

13 DR. ERBA: Sure.

14 MR. EASTMAN: You mentioned that in 2011 milk  
15 production has been increasing, especially over the  
16 last couple of months. There's obviously more cows  
17 that are coming on, milk prices over the last number of  
18 months have been increasing, and so prices paid to  
19 dairy producers have gone up. How would you expect,  
20 say, your membership to react to this? Do you think  
21 they're going to be adding more cows to increase  
22 production as we go throughout the summer and the rest  
23 of the year? What would you estimate or guess that to  
24 be knowing that, obviously, we don't have a crystal  
25 ball and we can't predict the future, but what would

1 you anticipate?

2 DR. ERBA: That's a good question and a fair  
3 question. (Indiscernible) brought 450 members and I  
4 expect that that decision will range A to Z. We'll  
5 have some members that are going to have a tough time  
6 making it even with these kind of milk prices because  
7 their costs are higher. Our costs, as you well know,  
8 are extraordinary at this point. And we've got some  
9 members who are probably a little bit better off in the  
10 way they planned ahead, contracted for feed. And those  
11 contracts are going to expire at some point, but at  
12 this point, for this year, they're situated pretty  
13 well. And we've got folks all the way in between.

14 So I don't know that I can give you a great  
15 answer there because of the size of the co-op, the  
16 diversity, kind of members we've got are, I think,  
17 you'll see all kinds. You'll see some that are  
18 trending toward the expansion mode and some that are  
19 just trying to hold on.

20 MR. EASTMAN: Okay. So let's suppose that  
21 over the next foreseeable few months or the rest of the  
22 year, on average CDI's milk production of all of your  
23 members in aggregate tend to start increasing now. Do  
24 you think that's going to (indiscernible) issues of  
25 handling milk? You mentioned before that you felt

1 these were times or were just demand going down, being  
2 in crisis mode. Do you feel like even at milk plants  
3 where they go down, do you think we could reach that  
4 tipping point again?

5 DR. ERBA: Well, we have -- we have our own  
6 supply management program at CDI. It's still in place.  
7 It was put in back in 2008. And so we do have some  
8 mechanism for monitoring and adjusting our milk supply  
9 within our own co-op. I don't think we're in any  
10 danger of getting past our theoretical handling  
11 capacity, but that remains to be seen. As I told  
12 Ms. Gates, we're one breakdown at a plant away from  
13 having a fairly large disaster on our hands.

14 But back to your question, I don't think  
15 we're going to have any real issues with that because  
16 we do have a supply management program that's already  
17 in place at CDI.

18 MR. EASTMAN: If maybe you could refresh my  
19 memory. So with your supply management, your  
20 production-based program, if you get too much  
21 production and have problems placing that milk and,  
22 say, you have to ship it out of state at discounts or  
23 -- except, if I remember correctly, you charge them.  
24 There's some sort of surcharge, a (indiscernible), or  
25 something that's placed on those producers who have

1 grown.

2 DR. ERBA: That's right.

3 MR. EASTMAN: And so have you been, over the  
4 last few months or lately at all, have you had to  
5 implement any of those surcharges on your members?

6 DR. ERBA: We haven't had to do that since  
7 2009.

8 MR. EASTMAN: Okay. So it's been a couple of  
9 years. But from what you're stating now, if you were  
10 to start creeping to that tipping point, so to speak,  
11 you would implement those surcharges and try and have  
12 your production base then function the way it's  
13 supposed to with regards to limiting production then.

14 DR. ERBA: That's correct. The same  
15 mechanism that we had available to us as a co-op in  
16 2009 we still have available to us.

17 MR. EASTMAN: I think that's all the  
18 questions I had.

19 HEARING OFFICER MAXIE: Any other questions?

20 (No audible response.)

21 HEARING OFFICER MAXIE: Thank you, Dr. Erba.

22 DR. ERBA: Thank you.

23 HEARING OFFICER MAXIE: I'd like now to call  
24 the second Petitioner, Land O'Lakes. Land O'Lakes will  
25 also have a period of 45 minutes to present testimony.
