2009	18,477	47,406	788,459										

^{1/} Disadvantageous price situations occur when the blend price adjusted for location is equal or less than the Class II, III, or IV price. In these situations, handlers may be able to elect not to pool milk that normally would have been associated with the order. Handlers also may elect to not pool milk when it is more advantageous to associate the milk with a State milk order. These figures have been estimated.

^{2/} Totals may not add due to rounding.
