Schedule 11

Base Primal % = 56.5, higher % receive premiums, lower receive discounts

Max Primal Premium = 4.5%, unlimited discounts

Premium based on 56 day avg of quoted market prices for primal cuts

Outside 164-205 pound weight range, sort discount is reimbursed for primals of acceptable size

Schedule 12

Premium = Lean % as determined by Autofom - 56.5; lean 5 capped at 61%

Premium based on 56 day avg of quoted market prices for primal cuts

Outside 168-205 pound weight range, sort discount is reimbursed for primals of acceptable size

No premiums paid for carcasses < 168 pounds

Schedule 13

Weight Range	Premium/Discount
<164	-1.25%/lb -- max 20%
164 - 184	\$0.00
185 - 195	\$.75/cwt

Schedule 65

1) All hogs, to be considered deliverable pursuant to this agreement, must meet buyer existing weight specifications for all hogs purchased by plants at time of delivery. Any load of hogs or any hog sorted out at the time of delivery will be priced according to existing weight or quality discount schedule.

2) All qualifying hogs shall be free of the following defects:

- a) Abscesses
- b) Scars
- c) Ruptures
- d) Uncastrated males
- e) Freshly castrated
- f) Fresh cut or unhealed wound
- g) Any defect that would result in a downgrade of the animal's carcass.

All hogs delivered under this agreement will be purchased subject to passing inspection by the USDA with deductions in compensation for all carcasses or carcass parts that are condemned by USDA inspectors.

3) Hogs will meet all other quality characteristics defined in the agreement.

Hogs delivered by seller must be treated in a humane manner at all times and in compliance with applicable welfare standards. In addition, if reasonably determines that seller has allowed or has failed to correct improper animal well-being practices or conditions at the facilities, may terminate or suspend performance of the agreement. With respect to the production and purchase of hogs hereunder, each party agrees to perform under this agreement in material compliance with all applicable laws and regulations.

Schedule may be reasonably amended from time to time.

Schedule 140

Description of Carcass Trim

1. Remove the head to leave full jowls attached to the carcass.
2. Remove aorta, diaphragm membrane and gible.
3. Split the carcass uniformly through the center of the backbone.
4. Remove hair, pizzelle cords, all internal and external female reproductive organs, lactating mammary tissue, rectum (bung) tissue, abscess, ingesta, spinal cord, thyroid, liver and/or trachea (wind pipe). toenails and pieces of lungs, kidney,
5. Trim stick wounds to remove blood clots, scald water contamination and external burnt/singed area.
6. Remove all skin defects, such as dermatitis, bug bites, rashes or other defects as identified by USDA inspection or the Quality Assurance Department that is determined not edible or not in compliance with regulation.
7. Leaf fat is completely removed, including flank and tenderloin area:
 - a. Remove fat more than 1/8" thick and loose hanging pieces which may remain on the tenderloin or flank.
 - b. A maximum of 2 square inches (1/4" depth) on the belly will be allowed.
8. Full jowls, tails, front and hind feet will remain intact as normal dressing procedures.

Schedule 146

Factors Pertaining to Carcass Merit Program

- 1) Carcass Weights - Hot carcass weight is recorded prior to entering carcass coolers.
- 2) Fat Quality Standards -Buyer uses either GC or NIR technology to measure Iodine Values (IV) on fat samples removed from the carcass adjacent to the first rib of the shoulder. We will periodically take random fat samples to calculate supplier averages. Our ideal IV Value is < 74 with an acceptable range being 74-78. Carcass values > 78 are considered unacceptable and requests will be made of sellers to modify practices to meet the acceptable range. Failure to make the appropriate changes may result in carcasses being deemed “Nonqualifying Market Hogs”.
- 3) Unidentified Carcasses, or Missing Carcass Information:
 - a. Carcasses which are unidentified, or carcasses with missing information, such as weight, can result from manual skinning to remove defects, missing or unreadable tattoos, carcass scale malfunction, or other related factors. In the event that carcass weights and/or carcass quality information cannot be identified on an individual carcass, the carcass will be added back to the lot and paid on the basis of the lot average for carcass weight on which information has been collected.
 - b. In the event that more than 20% (excluding dead and condemned hogs) of the carcass weights are missing, the lot shall be paid off of the live weight of the lot and will use the dressed yield and sort premium from the three most recent representative lots delivered to that buyer plant. In the event that both live and carcass weights are missing, the seller shall be asked for proof of live weight from a certified scale. In the event that seller can not produce proof of live weight from a certified scale, the average dressed weight from the three most recent representative lots delivered to that plant shall be used for payment purposes.
- 4) Condemnations - Carcasses marketed through the carcass merit program must be healthy and pass USDA inspection. Carcass and product losses due to condemnation will be the responsibility of the seller. Carcass defects such as bruises, scar tissue, abscesses, tail bites, needle injection sites, insect bites, etc. may result in the resale of that hog or will be trimmed from carcass as a loss to the seller.
- 5) Non-Surgically Castrated Males –Immunologically castrated males may only be presented for slaughter with prior approval from buyer Animals that are condemned for any reason relative to this technology will be at the seller’s expense.
- 6) Carcass Dressing Procedures
 - a. Head is removed with full jowls left attached to carcass.
 - b. Hanging tenders, spinal cord, aorta, diaphragm, giblet, pizzle cords, all internal and external reproductive organs, lactating mammary tissue, rectum (bung) tissue, abscesses, ingesta, thyroid gland, toenails, lungs, kidneys, liver, trachea (windpipe) and hair are removed.
 - c. Blood clots due to stick wounds, scalded water contamination and external burnt areas are trimmed from carcass.
 - d. Leaf fat is removed along with any loose fat hanging on the carcass.

Schedule 146

7) No Value Animals – Animals delivered to the plant that have no value shall be assessed the posted rendering charge to seller to cover cost to remove this animal to rendering. This charge will be posted at each plant and is \$5.00/hd. No Value Animals include emaciated, sick, injured or dead animals

8) Non Ambulatory: Animals which are non-ambulatory on the truck at arrival will be euthanized. After unloading, any animal delivered that is, or becomes non-ambulatory prior to entering a lairage pen will be valued at 75% of the base price on a live weight basis. The lot average weight will be used to calculate the base price adjustment for non-ambulatory animals.

9) Insurance: Buyer offers a Loss Protection Program which protects seller against death loss to the hogs between the time the hogs leave the seller's property until the hogs are unloaded at the processing plant which covers in transit dead animals, 100% yard deads, and the charges for non-ambulatory and deads. There is a fee deducted from sellers proceeds for such protection, and the amount is in accordance with the policy premium in effect at the time of the transaction. seller may decline from participating in the program at any time by providing notice to buyer in a written format. However, a seller who declines will not be eligible to participate in the loss protection program for the following 12 months.

10) Withdrawal Times: Buyer exports products to many different countries which may have withdrawal times which are different to those established by FDA for the United States. A list of examples is below, but may not be all inclusive. If you have questions regarding the use of any medication as it relates to export markets, please contact the manufacturer, the National Pork Board, or us:

- a. Tetracyclines-14 day withdrawal on feed grade administrations or extended FDA withdrawal times.
- b. Excede-48 days minimum for Japan with 72 days for EU or if a primal that may contain an injection site is exported.

Schedule 147

Schedule 226

Hogs shall be live and must pass USDA ante mortem inspections and be disease free.

Hogs must be within USDA limits on all residues (e.g., sulfa, tetracyclines, penicillin, etc.).

Buyer shall not be required to accept any hog which has a live weight of less than 240 pounds or more than 320 pounds.

Buyer shall not be required to accept any hog which meets the definition of either an "ambulatory disabled livestock" or a "non-ambulatory disabled livestock," as such terms are defined under Directives issued by USDA's Food Safety and Inspection Service ("FSIS").

Each Hog shall have been raised following animal welfare, animal husbandry and humane handling procedures that at all times meet the requirements of PQA Plus (Pork Quality Assurance Plus), TQA (Transport Quality Assurance), the Common Swine Industry Audit (CSIA) or successor programs of the National Pork Board.

The carcasses from the hogs must pass USDA post-mortem inspection.

The carcasses from the hogs shall not have excessive insect bites (e.g., flies, mosquitoes, etc.), as determined by Buyer. Insect bites shall be deemed excessive if any of the following conditions are met due to the bites: trim loss is above normal, USDA requires a carcass to be trimmed, the carcass is railed out to perform the trimming, or the belly from the carcass decreases from a grade #1 to a lesser grade.

The hogs shall not have had any diseases which result in additional handling of the carcasses and/or decreased value or yield of the carcasses, as determined by Buyer. Diseases shall include, but not be limited to the following: pneumonia, peritonitis, jaundice, pericarditis, or arthritis. Additional handling of the carcasses and/or decreased value or yield of the carcasses shall include, but not be limited to, the following: trim loss above normal, down-time on the chain or rail, or damage or loss to portions of the carcass (e.g., ribs, belly, loins, etc.).

Schedule 227

Carcass Weight Range	Adjustment/cwt
< 160	-\$18.00
160 - 160.9	-\$12.00
170 - 170.9	-\$4.00
180 - 204.9	\$0.00

215 - 234.9	\$0.00
235 - 244.9	-\$5.00
> 245	-\$15.00

Schedule 228

Hogs shall be live and must pass USDA ante mortem inspections and be disease free.

Hogs must be within USDA limits on all residues (e.g., sulfa, tetracyclines, penicillin, etc.).

Buyer shall not be required to accept any hog which has a live weight of less than 230 pounds or more than 320 pounds.

Buyer shall not be required to accept any hog which meets the definition of either an ambulatory disabled livestock or a "non-ambulatory disabled livestock," as such terms are defined under Directives issued by USDA's Food Safety and Inspection Service ("FSIS").

Hogs shall be produced solely from seller's sow herd located at the Designated Production Facilities, and the hogs shall be produced solely at the Designated Production Facilities.

Each Hog shall have been born and raised exclusively in the United States.

Each Hog shall have been raised following animal welfare, animal husbandry and humane handling procedures that at all times meet the requirements of PQA Plus (Pork Quality Assurance Plus) and TQA (Transport Quality Assurance) or successor programs of the National Pork Board.

The carcasses from the hogs must pass USDA post-mortem inspection.

The carcasses from the hogs shall not have excessive insect bites (e.g., flies, mosquitoes, etc.), as determined by buyer. Insect bites shall be deemed excessive if any of the following conditions are met due to the bites: trim loss is above normal, USDA requires a carcass to be trimmed, the carcass is railed out to perform the trimming, or the belly from the carcass decreases from a grade # 1 to a lesser grade.

The hogs shall not have had any diseases which result in additional handling of the carcasses and/or decreased value or yield of the carcasses, as determined by buyer. Diseases shall include, but not be limited to the following: pneumonia, peritonitis, jaundice, pericarditis, or arthritis. Additional handling of the carcasses and/or decreased value or yield of the carcasses shall include, but not be limited to, the following: trim loss above normal, downtime on the chain or rail, or damage or loss to portions of the carcass (e.g., ribs, belly, loins, etc.).

Schedule 239

Prohibited Drugs – The following drugs shall not be administered to Market Hogs:

Chloramphenicol

Clenbuterol

Diethylstilbestrol (DES)

Dimetridazole

Ipronidazole

Other nitroimidazoles

Furazolidone

Nitrofurazone

Fluoroquinolones (except for enrofloxacin)

Glycopeptide based antibiotics (vancomycin, bleomycin, ristocetin, teicoplanin)

Cephalosporins (not including cephapirin) as follows:

For disease prevention purposes;

At unapproved doses, frequencies, durations, or routes of administration; or

If the drug is not approved for that species and production class.

Sulfathiazole

Any extralabel use of parenterally administered aminoglycoside antibiotics.

Improvect® (gonadotropin releasing factor analog – diphtheria toxoid conjugate)

If the drug is not approved for that species and production class.

Sulfathiazole

Any extralabel use of parenterally administered aminoglycoside antibiotics.

Improvect® (gonadotropin releasing factor analog – diphtheria toxoid conjugate)

Schedule 240

ANTIBIOTIC WITHDRAWAL PROGRAM

Antibiotic Withdrawal Program – All Market Hogs delivered by Producer must be free of any violative drug residues to fully comply with the maximum residue limit (MRL) requirements for all domestic and international pork product sales including, but not limited to, the MRL requirements for Japanese pork product sales and the USDA Export Verification Program MRL requirement for pork product sales to the Russian Federation. To comply with the USDA Export Verification Program, Producer must meet the specified withdrawal period of at least 14 days, for tetracycline group antibiotics. Producer is responsible for managing the use and withdrawal times for all antibiotics, drugs and medications to ensure that no violative residue exists in the Market Hogs.

AMDUCA Requirement – The Animal Medicinal Drug Use Clarification Act of 1994 (AMDUCA) allows veterinarians to prescribe extralabel uses of certain approved animal drugs and approved human drugs for animals under certain conditions. Extralabel (or extra-label) use refers to the use of an approved drug in a manner that is not in accordance with the approved label directions. The key constraints of AMDUCA are that any extralabel use must be by or on the order of a veterinarian within the context of a veterinarian-client- patient relationship, must not result in violative residues in food-producing animals, and the use must be in conformance with the implementing regulations published at 21 CFR Part 530. A list of drugs specifically prohibited from extra-label use (530_41.txt and 530_41.pdf) appears in the Code of Federal Regulations. The minimum withdrawals are Processor's minimums. The prescribing veterinarian is still responsible for ensuring that there is no ensuing violative residue. If the prescribing veterinarian chooses to implement a longer withdrawal period, the longer withdrawal period will supersede the minimum withdrawal time in this exhibit. No extralabel uses of drugs in animal feed are allowed.

FDA Guidance 209, FDA Guidance 213, and Veterinary Feed Directive (VFD) Requirements:

By December 8, 2015 – Stop using all medically important antibiotics to improve growth rate or improve feed efficiency.

By December 12, 2016 – All water soluble antibiotic products containing medically important antibiotics must change from Over the Counter (OTC) to Rx status (even if they are used according to label directions).

By January 1, 2017 – A VFD will be required to add any medically important antibiotics (listed in Guidance #152) to food animal rations (21 CFR Part 558).

Schedule 241

Prohibited Drugs – The following drugs shall not be administered to Market Hogs:

Chloramphenicol

Clenbuterol

Diethylstilbestrol (DES)

Dimetridazole

Ipronidazole

All other nitroimidazoles

Furazolidone

Nitrofurazone

Fluoroquinolones (except for enrofloxacin)

Glycopeptide based antibiotics (vancomycin, bleomycin, ristocetin, teicoplanin)

Roxarsone (3-Nitro)

Any extralabel use of parenterally administered aminoglycoside antibiotics.

Improvect® (gonadotropin releasing factor analog – diphtheria toxoid conjugate)

Schedule 243

CLEAN BIN VERIFICATION

In the event that medicated feed requiring a pre-slaughter withdrawal has been placed in the bins of the finishing building, the following CLEAN BIN VERIFICATION protocol must be implemented

Bin Verification

1. Prior to Topping/Shipping, all bins must be verified clean of medicated feed. The amount of time prior to Topping/Shipping is specified in Exhibit E-3, Table 3 under the Feed Additive section.
2. Each bin must be opened and visually inspected to insure that the bin is empty and no residue from the medicated feed remains.
3. Once verified, yellow survey tape must be placed on the left front bin leg or other easily noticed signage or identification must be used to indicate a nonmedicated status.
4. A system must be in place to only allow nonmedicated feed to be delivered to the bin between the time the bin has been verified to be clean and the last pig has been marketed from the barn.

Schedule 249

Animal Health and Welfare

Animal health and comfort are paramount.

No antibiotics will be used in feed for growth or performance enhancement.

Vaccinations and health treatments will be specifically targeted to prevent or treat illness.

Treatment must be specific and either injectable or water applied.

All treatments will be recorded.

No extra label drug use is permitted.

No hormone or hormone-like growth [Such as Ractopamine (Paylean)] enhancers will be used in

All producers must have a veterinarian on file with the Executive Director of SCFMA.

If piglets are treated with injections other than nonnal baby pig vaccinations, they must be identified by lot. For individuals treated, a red ear tag should be applied in their left ear. Any injectable treatment occurring after 75lbs will require removal of the pig from after 75lbs will not be shipped for processing to Independent Meat Company.the Salmon Creek Farms Marketing Association Program. Any pig treated by injection

1 market pigs.

Schedule 252

CLEAN BIN VERIFICATION

In the event that medicated feed requiring a pre-slaughter withdrawal has been placed in the bins of the finishing building, the following CLEAN BIN VERIFICATION protocol must be implemented:

1. Prior to Topping/Shipping all bins must be verified clean of medicated feed. The amount of time prior to Topping/Shipping is specified in the feed additive section.
2. Each bin must be opened and visually inspected to insure that the bin is empty and no residue from the medicated feed remains. This includes complete removal of the bin slide and checking the doors for potential residue
3. Once verified, yellow survey tape must be placed on the left front bin leg to indicate a non-medicated status.
4. A system must be in place to only allow non-medicated feed to be delivered to the bin between the time the bin has been verified to be clean and the last pig has been marketed from the barn.

Schedule 253

CARCASS FAT SAMPLE COLLECTION PROCEDURE

An iodine value is a measure of the unsaturation of fats and is expressed in terms of the number of centigrams of iodine absorbed per gram of sample (% iodine absorbed). Processor will collect random fat samples periodically from Producer's Market Hogs to determine a composite iodine value of the fat. Processor will use the following procedure to collect fat samples used to measure the iodine values.

Fat Sample Collection Frequency: Fat samples shall be collected from Producer's Market Hogs quarterly. Processor will perform tests as needed to obtain a representative sampling of Producer's population of Market Hogs. Should a test result be an iodine value greater than or equal to 72.1 then a 2nd test shall be performed within 30 days of the initial test.

Fat Sample Collection Quantity: A minimum of thirty (30) fat samples shall be collected from Producer's Market Hogs for the purpose of verifying compliance with Processor's maximum iodine value requirement. The thirty (30) fat samples may be obtained by collecting a minimum of ten (10) fat samples from three different tattoo numbers representing different production sites.

Fat Sample Collection Procedure:

1. Prior to sample collection, tattoo numbers representing loads of Market Hogs from Producer are identified. Verify that the loads have sufficient numbers of barrows.
2. Barrows with the tattoo of interest are identified after the dehairing machine on the kill floor.
3. Trim a portion of belly fat located just adjacent to the manubrium (roughly, the posterior end of the sternum or brisket bone) from the identified barrow carcasses and place in labeled sample bags.
4. Transport the belly fat samples to the laboratory and store in a refrigerator for cooling.

Fat Sample Preparation Procedure for Near Infrared (NIR) Analysis: Follow the written laboratory procedures for fat sample preparation for NIR analysis.

Schedule 254

Description of Carcass Trim

Removal of head, but with jowls attached to the carcass.

Removal of aorta, diaphragm membrane, gible, and glands.

3. Split the carcass uniformly through the center of the backbone.

4. Removal of hair, pizzle cords, all internal and external reproductive organs, lactating mammary tissue, rectum (bung) tissue, abscess, ingesta, spinal cord, thyroid, toenails, kidneys, and viscera.

Trimming of stick wounds and any burnt areas.

Removal of all skin defects, including but not limited to dermatitis, insect bites, rashes, hair or other defects.

Complete removal of all heart fat and leaf fat, including the flank and tenderloin areas:

Removal of fat more than 1/8" thick and loose hanging pieces of fat that otherwise would remain on the tenderloin or flank.

A maximum of 2 square inches of fat (1/4" depth or less) on the belly will be allowed.

Unless contaminated, defective or condemned, the jowls, tail, and front and hind feet will remain intact as normal dressing procedures

Any removal and trimming necessary to comply with all USDA regulations

Schedule 256

On Farm Requirements include:

Traceability: All pigs are traceable to farm of origin including sow unit, nursery and finishing. Records must be maintained to support traceability

Country of Origin: All pigs are born in United States or Canada, and raised in the United States.

TQA Certification: All truck drivers must be TQA Certified and abide by our trucker expectations. This is verified on each load.

PQA+ Certification. All key management personnel have current PQA+ Certification.

PQA+ Site Assessment. All premises must achieve site status through the National Pork Board's Pork Quality Assurance Plus (PQA+) program or CQA, and be available for the verification pool. a. Finishing Sites b. Nursery Sites c. Sow Units

Follow the requirements in the **Common Swine Industry Audit** including but not limited to:
a. Caretaker Training: Caretakers must be PQA+ certified within 6 months of employment and receive annual documented job specific training. b. SOPs and records as listed in the audit instrument c. Internal site audits of the facility, animals, caretakers and procedures must be conducted at least quarterly on sow farms and semi-annually on nursery and finishing farms. d. Documentation of corrective action from audit findings.

Third Party Auditing. All sites must complete a third party audit using the Common Swine Industry Audit and share results OR agree to participate in the random audit pool. Sow farms located in Canada that are drawn from the audit pool will be audited at the producers' cost differential.

Schedule 257

HOG REQUIREMENTS:

1. In raising these animals (birth to slaughter), the following have *never* been used:
 - a. Supplemental hormones, of any kind, in the feed
 - b. Steroids and beta-agonists
 - c. Antibiotics, including ionophores, either therapeutic or sub-therapeutic
 - d. Animal by-products
2. The feed used for these animals at the grow and finishing sites did not come in contact with conventional feeds containing any of the above-mentioned items; and the proper documentation (i.e. feed labels, feed delivery slips, etc.) to confirm compliance with production claims has been kept and will be available for a period of two years.
3. Milk products (e.g., whey, dry milk, etc.) may be used during the weaning period as NAE piglets transition from nursing (milk diet) to a grain diet. Full disclosure of the use of milk products must be provided to buyer
4. All animals receiving medication or deemed ineligible for any reason have been identified and/or removed from the barn.
5. Hogs are derived from sows that were housed in loose sow housing/group pens during the gestation period. The gestation period is defined within this program as 35-42 days post-breeding (when pregnancy is confirmed) and up until the final week prior to farrowing.
6. Good animal husbandry practices have been followed to provide proper housing, good nutrition, and low stress handling to ensure each animals health and wellbeing has been maintained.
7. Animals are raised with proper care at every stage of life through Pork Quality Assurance Plus guidelines.
8. Animals are traceable to place of birth via affidavits and production records.

PRODUCER REQUIREMENTS:

1. Suppliers of program hogs are required to have an initial onsite review conducted by buyer or an approved third-party auditor prior to approval as an eligible supplier.
2. Annual onsite re-evaluations of approved suppliers are required.
3. Approved suppliers are responsible for the ensuring all minimum requirements of this program are met at all production locations within their system. This process and all associated documents will be reviewed during the supplier review. This is to include every stage of production that can impact the raising claims associated to the program including, but not limited to:
 - a. Feed Mills
 - b. Sow / Farrowing Barns
 - c. Grow Barns
 - d. Finishing Barns
4. Affidavits must be in place for every transfer of ownership or location for any marketed program hogs allowing buyer to trace the animals back to their place of birth and verify the claims noted above.
5. Production sites must have procedures in place to ensure employee training, hog identification and traceability, animal health program, and feeding practices are acceptable to the program.
6. Affidavit must accompany each truckload of program hogs sent to a establishment.

Schedule 265

Swine Specifications

Swine will meet a load live weight range of 221-290 pounds, with a 74% average carcass yield.

Swine will be NPPC Level 3 or higher.

Swine will provide minimum lean yield of 52%.

Seller shall participate in the buyer HACCP Program or a Canadian equivalent acceptable to buyer

Each load will be accompanied by a completed delivery form.

Schedule 287

PROHIBITED DRUG USAGE AND ANTIBIOTIC WITHDRAWAL PROGRAM

According to CFR Title 21, section 530.41, the following drugs shall not be used in an extra label manner:

Chloramphenicol
Clenbuterol
Diethylstilbestrol (DES)
Dimetridazole
Ipronidazole
Other nitroimidazoles
Furazolidone
Nitrofurazone
Fluoroquinolones
Glycopeptides
Cephalosporins

The minimum withdrawal times in specified table shall be followed. This list is inclusive for approved drugs. If the Seller wishes to use a drug not on this list, it must be approved prior to use.

Schedule 288

Schedule 291

USDA Process Verified Program Never Ever 3

1-No Antibiotics No antibiotics can be administered whether through feed, water, or by injection, from birth to slaughter. This includes low-level (sub-therapeutic) or therapeutic level doses, sulfonamides, and ionophores. However, ionophores used as coccidiostats for parasite control may be used. See Note 1 below. If animals require antibiotics for treatment of illness, they must be treated and removed from the program.

2-No Growth Promotants. The administration of growth hormones, including natural hormones, synthetic hormones, estrus suppressants, beta agonists, or other synthetic growth promotants is prohibited from birth to slaughter.

3-No Animal By-Products. Mammalian and avian byproducts are not allowed in the feed. These by-products include animal waste (e.g. poultry litter) and by-products as defined by 9 CFR 301.2 (e.g. products derived from the slaughter/harvest process including meat and fat). Fish by-products and vitamin and mineral supplementation are permissible. See Notes 2 and 3 below.

Any animal that receives any of the "Never Ever 3" prohibited substances must be identified as nonconforming and removed from the program.

Note 1: Programs requesting approval to use ionophores as coccidiostats must provide a parasite treatment and control plan as part of their quality management system and must meet the FSIS labeling requirements specific to the use of ionophores as coccidiostats to prevent parasitism.

Note 2: If fish by-products are feed, it must be declared in the program's documentation and posted on the AMS web site.

Note3: Vitamins and minerals, including salt, are not considered feed additives for this program and are not subject to the Never Ever 3 requirements.

Note 4: US born animals verified under this program qualify as "Product of the USA".
